CONTRACT DOCUMENTS

FOR

C-4016 New Science Building – Increment 2

AT

Contra Costa College
2600 Mission Bell Dr., San Pablo, CA 94806

CONTRA COSTA COMMUNITY COLLEGE DISTRICT

Consists of:

VOLUME 2 - Division 02 - 14

DSA File #7-C1
DSA Appl. #01-117149

Architect:
SmithGroup, Inc.
301 Battery Street, 7th Floor
San Francisco, CA 94111
415.227.0100

July 24, 2019
SECTION 00007
SEALS PAGE

ARCHITECT: SMITHGROUP
Chun-Kei J. Wong
301 Battery Street, 7th Floor
San Francisco, Ca 94111
(415) 227-0100

LANDSCAPE ARCHITECT RHA
Manuela King
225 Miller Ave.
Mill Valley, CA 94941
(415) 383-7900

CIVIL ENGINEER: BKF ENGINEERS
Dayne Johnson
1646 N. California Blvd, #400,
Walnut Creek, CA 94596
(925) 940-2200

LABORATORY PLANNING RESEARCH FACILITIES DESIGN
Richard M. Heinz
3965 Fifth Avenue, Suite 400
San Diego, CA 92103
(619) 297-0159

STRUCTURAL ENGINEER RUTHERFORD + CHEKENE
David Bleiman
375 Beale Street, Suite 310
San Francisco, CA 94105
(415) 568-4400
MECHANICAL ENGINEER
INTEGRAL GROUP
David Costello
427 13th Street
Oakland, CA 94611
(510) 663-2070

ELECTRICAL ENGINEER
INTEGRAL GROUP
Vish Mahajan
427 13th Street
Oakland, CA 94611
(510) 663-2070

FIRE PROTECTION ENGINEER
THE FIRE CONSULTANTS, INC.
John Stauder
1777 N. California Blvd., Suite 200
Walnut Creek, CA 94596
(925) 979-9993

TECHNOLOGY ENGINEER
TEECOM
Larry A. Anderson
1333 Broadway Suite 601
Oakland, CA 94612-1906
(510) 337-2800

END OF SECTION 00007
# SECTION 00010
## TABLE OF CONTENTS

**VOLUME 1 – DIVISIONS 00 - 01**

### DIVISION 00 - PROCUREMENT AND CONTRACTING REQUIREMENTS
- SECTION 00001 TITLE PAGE
- SECTION 00007 SEALS PAGE
- SECTION 00010 TABLE OF CONTENTS
- SECTION 00016 CCC COLLEGE COMPLEX MAP (Note Location for Pre-Bid Meeting)
- SECTION 00100 NOTICE INVITING BIDS
- SECTION 00200 INSTRUCTIONS TO BIDDERS
- SECTION 00210 INFORMATION AVAILABLE TO BIDDERS
- SECTION 00300 BID PROPOSAL FORM
- SECTION 00350 NON-COLLUSION AFFIDAVIT
- SECTION 00400 STATEMENT OF BIDDER’S QUALIFICATIONS
- SECTION 00450 CERTIFICATION OF SITE VISIT
- SECTION 00500 PAYMENT AND PERFORMANCE BOND
- SECTION 00510 NOTICE OF AWARD
- SECTION 00600 CONSTRUCTION AGREEMENT
- SECTION 00650 NOTICE TO PROCEED
- SECTION 00700 GENERAL CONDITIONS

### DIVISION 01 - GENERAL REQUIREMENTS
- SECTION 01010 SUMMARY OF WORK
- SECTION 01015 ADDITIONAL REQUIREMENTS FOR DSA-APPROVED PROJECTS
- SECTION 01030 ALTERNATES
- SECTION 01050 FIELD ENGINEERING
- SECTION 01055 CONFORMANCE SURVEYING
- SECTION 01140 WORK RESTRICTIONS
- SECTION 01250 CONTRACT MODIFICATION PROCEDURES
- SECTION 01290 PAYMENT PROCEDURES
- SECTION 01300 LABOR COMPLIANCE PROGRAM
- SECTION 01305 DELAY AND EXTENSIONS TO THE WORK
- SECTION 01310 CONSTRUCTION SCHEDULING
- SECTION 01311 PROJECT MANAGEMENT AND COORDINATION
- SECTION 01312 PROJECT MEETINGS
- SECTION 01316 BUILDING INFORMATION MODELING (BIM)
- SECTION 01318 DOCUMENT MANAGEMENT SYSTEM
- SECTION 01321 PHOTOGRAPHIC DOCUMENTATION
- SECTION 01330 SUBMITTAL PROCEDURES
- SECTION 01340 ADMINISTRATIVE FORMS AND LOGS
- SECTION 01400 QUALITY CONTROL REQUIREMENTS
- SECTION 01405 MOCKUP REQUIREMENTS, Provided by SmithGroup
- SECTION 01410 REGULATORY REQUIREMENTS
- SECTION 01411 TESTING LABORATORY SERVICES
- SECTION 01412 HAZARDOUS MATERIALS
- SECTION 01414 GUIDELINES FOR OPERATIONS DURING A PROTEST
- SECTION 01415 MITIGATION MONITORING REGULATORY REQUIREMENTS
- SECTION 01416 SPECIAL PROCEDURES
- SECTION 01420 REFERENCES
- SECTION 01500 TEMPORARY FACILITIES AND CONTROL
- SECTION 01505 CONSTRUCTION WASTE MANAGEMENT
- SECTION 01540 SITE SECURITY AND SAFETY
SECTION 01572 STORM WATER POLLUTION PREVENTION
SECTION 01610 BASIC PRODUCT REQUIREMENTS
SECTION 01625 PRODUCT OPTIONS AND SUBSTITUTIONS
SECTION 01710 CLEANING REQUIREMENTS
SECTION 01722 EXECUTION REQUIREMENTS
SECTION 01730 CUTTING AND PATCHING
SECTION 01740 WARRANTIES / GUARANTEES
SECTION 01770 CONTRACT CLOSEOUT PROCEDURES
SECTION 01780 PROJECT RECORD DOCUMENTS
SECTION 01785 OPERATIONS AND MAINTENANCE DATA
SECTION 01805 CALGREEN ENVIRONMENTAL REQUIREMENTS, Provided by SmithGroup
SECTION 01813 SUSTAINABLE DESIGN REQUIREMENTS, Provided by SmithGroup
SECTION 01820 DEMONSTRATION AND TRAINING
SECTION 01913 GENERAL COMMISSIONING REQUIREMENTS, Provided by Enovity

VOLUME 2 – TECHNICAL SPECIFICATIONS - DIVISION 02 - 14, Provided by SmithGroup

DIVISION 00 - PROCUREMENT AND CONTRACTING REQUIREMENTS
SECTION 00001 TITLE PAGE
SECTION 00007 SEALS PAGE
SECTION 00010 TABLE OF CONTENTS

DIVISION 02 - EXISTING CONDITIONS
SECTION 024113 SELECTIVE SITE DEMOLITION

DIVISION 03 - CONCRETE
SECTION 030413 COMMON SUBMITTAL REQUIREMENTS FOR CONCRETE
SECTION 031100 CONCRETE FORMING
SECTION 031500 CONCRETE ACCESSORIES
SECTION 032000 CONCRETE REINFORCING
SECTION 033000 CAST-IN-PLACE CONCRETE
SECTION 033543 POLISHED CONCRETE FINISHING
SECTION 033546 SEALED CONCRETE FINISHING
SECTION 036100 GROUTED DOWELS IN CONCRETE

DIVISION 04 - MASONRY
SECTION 040413 COMMON SUBMITTAL REQUIREMENTS FOR MASONRY
SECTION 042113 BRICK MASONRY

DIVISION 05 - METALS
SECTION 050413 COMMON SUBMITTAL REQUIREMENTS FOR METALS
SECTION 050525 POST-INSTALLED CONCRETE ANCHORS
SECTION 051200 STRUCTURAL STEEL FRAMING
SECTION 051213 ARCHITECTURALLY EXPOSED STRUCTURAL STEEL (AESS)
SECTION 051250 BUCKLING RESTRAINED BRACES
SECTION 053100 STEEL DECKING
SECTION 054000 COLD-FORMED METAL FRAMING
SECTION 055000 METAL FABRICATIONS
SECTION 055113 METAL PAN STAIRS
SECTION 055119 METAL GRATING STAIRS
SECTION 055213 PIPE AND TUBE RAILINGS
SECTION 057005 LANDSCAPE METALWORK
SECTION 057100 DECORATIVE METAL STAIRS
SECTION 057300 DECORATIVE METAL RAILINGS
## DIVISION 06 - WOOD, PLASTICS, AND COMPOSITES

- **SECTION 060413** COMMON SUBMITTAL REQUIREMENTS FOR WOODS, PLASTICS, AND COMPOSITES
- **SECTION 061000** ROUGH CARPENTRY
- **SECTION 061600** SHEATHING
- **SECTION 064116** PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS
- **SECTION 066400** PLASTIC PANELING

## DIVISION 07 - THERMAL AND MOISTURE PROTECTION

- **SECTION 070413** COMMON SUBMITTAL REQUIREMENTS FOR THERMAL AND MOISTURE PROTECTION
- **SECTION 071113** BITUMINOUS DAMPPROOFING
- **SECTION 071326** BELOW-GRADE SHEET WATERPROOFING
- **SECTION 071413** HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING
- **SECTION 071619** METAL OXIDE WATERPROOFING
- **SECTION 072100** THERMAL INSULATION
- **SECTION 072726** MEMBRANE AIR BARRIERS
- **SECTION 074213** METAL WALL PANELS
- **SECTION 075419** POLYVINYL-CHLORIDE (PVC) ROOFING
- **SECTION 075556** FLUID-APPLIED PROTECTED MEMBRANE ROOFING
- **SECTION 076200** SHEET METAL FLASHING AND TRIM
- **SECTION 077200** ROOF ACCESSORIES
- **SECTION 078413** PENETRATION FIRESTOPPING
- **SECTION 078443** JOINT FIRESTOPPING AND FIRESAFING
- **SECTION 079200** JOINT SEALANTS
- **SECTION 079513.16** EXTERIOR EXPANSION JOINT COVER ASSEMBLIES

## DIVISION 08 - OPENINGS

- **SECTION 080413** COMMON SUBMITTAL REQUIREMENTS FOR OPENINGS
- **SECTION 081113** HOLLOW METAL DOORS AND FRAMES
- **SECTION 081416** FLUSH WOOD DOORS
- **SECTION 083113** ACCESS DOORS AND FRAMES
- **SECTION 083473.13** METAL SOUND CONTROL DOOR ASSEMBLIES
- **SECTION 084113** ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS
- **SECTION 084216** INTERIOR ALUMINUM STOREFRONT FRAMES
- **SECTION 084229.23** SLIDING AUTOMATIC ENTRANCES
- **SECTION 084413** GLAZED ALUMINUM CURTAIN WALLS
- **SECTION 084423** STRUCTURAL-SEALANT-GLAZED CURTAIN WALLS
- **SECTION 085113** MISCELLANEOUS INTERIOR ALUMINUM WINDOWS
- **SECTION 087100** DOOR HARDWARE
- **SECTION 087113** AUTOMATIC DOOR OPERATORS
- **SECTION 088000** GLAZING
- **SECTION 088300** MIRRORS
- **SECTION 088813** FIRE-RESISTANT GLAZING AND FRAMING
- **SECTION 089119** FIXED LOUVERS

## DIVISION 09 - FINISHES

- **SECTION 090413** COMMON SUBMITTAL REQUIREMENTS FOR FINISHES
- **SECTION 090561.13** MOISTURE VAPOR EMISSION CONTROL
- **SECTION 092116.23** GYPSUM BOARD SHAFT WALL ASSEMBLIES
- **SECTION 092216** NON-STRUCTURAL METAL FRAMING
- **SECTION 092400** CEMENT PLASTERING
- **SECTION 092900** GYPSUM BOARD
- **SECTION 093013** TILING
- **SECTION 095113** SUSPENDED ACOUSTICAL CEILINGS
DIVISION 09 - CONSTRUCTION PRODUCTS

SECTION 095423  SUSPENDED METAL CEILINGS
SECTION 096513  RESILIENT BASE AND ACCESSORIES
SECTION 096516  RESILIENT SHEET FLOORING
SECTION 096519  RESILIENT TILE FLOORING
SECTION 096723  RESINOUS FLOORING AND WALL COATINGS
SECTION 096813  TILE CARPETING
SECTION 097200  WALL COVERINGS
SECTION 098100  ACOUSTICAL INSULATION
SECTION 098433  SOUND-ABSORBING WALL AND CEILING UNITS
SECTION 099113  EXTERIOR PAINTING
SECTION 099123  INTERIOR PAINTING
SECTION 099600  HIGH-PERFORMANCE COATINGS

DIVISION 10 - SPECIALTIES

SECTION 100413  COMMON SUBMITTAL REQUIREMENTS FOR SPECIALTIES
SECTION 101100  VISUAL DISPLAY UNITS
SECTION 101200  DISPLAY CASES
SECTION 101419  DIMENSIONAL LETTER SIGNAGE
SECTION 101423  SIGNAGE
SECTION 102113.17  PHENOLIC-CORE TOILET COMPARTMENTS
SECTION 102600  WALL AND DOOR PROTECTION
SECTION 102800  TOILET, BATH AND MISCELLANEOUS ACCESSORIES
SECTION 104413  FIRE PROTECTION CABINETS
SECTION 104416  FIRE EXTINGUISHERS

DIVISION 11 - EQUIPMENT

SECTION 110413  COMMON SUBMITTAL REQUIREMENTS FOR EQUIPMENT
SECTION 113100  RESIDENTIAL APPLIANCES
SECTION 115310  LABORATORY CASEWORK AND OTHER FURNISHINGS
SECTION 115313  FUME HOODS AND OTHER AIR CONTAINMENT UNITS
SECTION 115343  LABORATORY SERVICE FITTINGS AND FIXTURES
SECTION 115350  LABORATORY EQUIPMENT

DIVISION 12 - FURNISHINGS

SECTION 120413  COMMON SUBMITTAL REQUIREMENTS FOR FURNISHINGS
SECTION 122413  ROLLER WINDOW SHADES
SECTION 123661.16  SOLID SURFACING COUNTERTOPS
SECTION 124813  ENTRANCE FLOOR MATS
SECTION 126100  FIXED AUDIENCE SEATING

DIVISION 13 - SPECIAL CONSTRUCTION

SECTION 130413  COMMON SUBMITTAL REQUIREMENTS FOR SPECIAL CONSTRUCTION
SECTION 132300  PLANETARIUM DOME
SECTION 132310  PLANETARIUM PROJECTION SYSTEM

DIVISION 14 - CONVEYING EQUIPMENT

SECTION 140413  COMMON SUBMITTAL REQUIREMENTS FOR CONVEYING EQUIPMENT
SECTION 142123.16  MACHINE-ROOM-LESS ELECTRIC TRACTION ELEVATORS

VOLUME 3 – TECHNICAL SPECIFICATIONS - DIVISION 21 – 33, Provided by SmithGroup

DIVISION 00 - PROCUREMENT AND CONTRACTING REQUIREMENTS

SECTION 00001  TITLE PAGE

END OF SECTION 00010
SECTION 024113 - SELECTIVE SITE DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes all work necessary to successfully complete demolition to prepare site for the phasing and new construction, including the following:

   1. Clean line saw cutting of existing asphalt pavement, concrete sidewalks, concrete curb/gutter, etc., as specified herein.
   2. Protection from injury or defacement existing building elements to be preserved.
   3. Removal of debris and deleterious materials such as rubbish.
   4. Removal and stockpile of materials for landscaping use at approved location.
   5. Disposal of unwanted or objectionable materials off site.
   6. Disconnecting, capping or sealing, and abandoning site utilities in place.
   7. Disconnecting, capping or sealing, and removing site utilities.
   8. Removing above-grade site improvements within limits indicated.

1.2 REGULATORY REQUIREMENTS:

A. No burning shall be allowed.

B. Do not use explosives.

C. Comply with the following California Code of Regulations:

   1. Title 8: CAL/OSHA, Chapter, Subchapter 4 – Construction Safety Orders.
   2. Title 24: Part 2, California Building Code, Chapter 33, Protection of Pedestrian during Construction or Demolition.
   3. Bay Area Air Quality Management District.

1.3 DEFINITIONS

B. CAL-OSHA: California Occupational Safety and Health Administration.

E. EPA: Environmental Protection Agency.

G. Remove: Detach items from existing construction and legally dispose of them off-site unless they indicated to be removed and salvaged or recycled.

H. Remove and Salvage: Detach items from existing construction, prior to demolition, and deliver
them to the District.

I. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed and salvaged, or recycled.

### 1.4 SUBMITTALS

A. Follow Submittal procedure outlined in Division 0 – General Conditions and Division 1 – General Requirements.

B. For LEED criteria related to waste management, follow the procedure outlined in section 018113 “Sustainability Design Requirements”.

### 1.5 PROJECT CONDITIONS

A. In all circumstances ensure that demolition work does not adversely affect adjacent water courses, groundwater and wildlife, or contribute to excess air and noise pollution.

B. Do not dispose, of waste or volatile materials such as mineral spirits, oil, petroleum based lubricants, or toxic cleaning solutions into watercourses, storm or sanitary sewers. Ensure proper disposal procedures are maintained throughout project.

C. Do not pump water containing suspended materials into watercourses, storm or sanitary sewers, or onto adjacent properties.

D. Control disposal or runoff of water containing suspended materials or other harmful substances in accordance with local authorities.

E. Protect trees, plants and foliage on site and adjacent properties where indicated.

F. Except for materials indicated to be stockpiled or to remain, cleared materials are the Contractor’s property. Remove cleared materials from site and dispose of in lawful manner.

### PART 2 - PRODUCTS

#### 2.1 SOIL MATERIALS

A. Backfill excavations resulting from demolition operations with on-site or import materials conforming to structural backfill defined in Section 31 23 33 Utility Trenching and Backfill.

### PART 3 - EXECUTION

#### 3.1 PREPARATION

A. Protect and maintain benchmarks and survey control points during construction.

B. Protect existing site improvements to remain during construction.
C. Provide the following temporary facilities to facilitate the demolition operations, as necessary:
   1. Temp Traffic Controls
   2. Protection of Persons and Property
   3. Protection of Utilities
   4. Protection of Trees
   5. Noise and Dust Abatement
   6. Clear and restore area to their original condition
   7. Protect existing site improvements and adjacent structures from removal and damage.
   8. Protect and maintain benchmarks and survey control points during construction.

3.2 RESTORATION

A. Restore areas and existing works outside areas of demolition to match conditions to their original condition, as acceptable to the District.

B. Restore damaged improvements to their original condition, as acceptable to the District.

3.3 UTILITIES

A. Locate, identify, disconnect, and seal or cap off utilities indicated to be removed or abandoned.

B. Arrange to shut off indicated utilities with utility companies or verify that utilities have been shut off.

C. Existing Utilities: Do not interrupt utilities serving facilities occupied by District or others unless authorized in writing by the District and then only after arranging to provide temporary utility services according to requirements indicated.

D. Coordinate utility interruptions with District.

E. Do not proceed with utility interruptions without the permission of the District and utility company affected. Notify the District and the utility company affected 14 working days prior to utility interruptions.

F. Excavate and remove underground utilities that are indicated to be removed.

G. Securely close ends of abandoned piping with tight fitting plug or wall of concrete minimum 6-inches thick.

H. Adjustment of manhole frames and other castings Caltrans Standard Specifications Sec 15-2.05A.

3.4 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and as necessary to facilitate new construction.

B. Remove slabs, paving, curbs, and gutters, as indicated. Where concrete slabs, curb, gutter and asphalt pavements are designated to be removed, remove bases and subbase to surface of underlying, undisturbed soil.
C. Unless the existing full-depth joints coincide with line of pavement demolition, neatly saw-cut to full depth the length of existing pavement to remain before removing existing pavement. Saw-cut faces vertically.

D. Remove driveways, curbs, gutters and sidewalks by saw cutting to full depth. If saw cut falls within 30-inches of a construction joint, expansions joint, score mark or edge, remove material to joint, mark or edge.

3.5 SALVAGED IMPROVEMENTS

A. Salvaged Improvements: Carefully remove items indicated to be salvaged and store where indicated on plans or where designated by the District. Avoid damaging materials designated for salvage.

3.6 DISPOSAL

A. Remove surplus obstructions, demolished materials, and waste materials, including trash and debris, and legally dispose of them off the District’s property.

B. Remove: Unless items are otherwise to remain or be reinstalled, remove and dispose of items. Do not store removed items that are of value to the contractor on site.

C. Remove and Reinstall: Remove items; clean, service and otherwise prepare for service; reinstall in the same location (or in the location shown on drawings).

D. Unidentified Materials: Unidentified materials, including hazardous materials that will require additional removal other than is required by the Contract Documents, are located in some underground utilities. Immediately report the discovery to the District. If necessary, the District will arrange for any testing or analysis of the discovered materials and will provide instructions regarding the removal and disposal of the unidentified materials.

3.7 CONSTRUCTION WASTE MANAGEMENT

A. Separate reusable and recyclable products from contaminated waste and debris in accordance with the General Contractor’s Waste Management Plan. Place recyclable and reusable products in designated containers and protect from moisture and contamination.

B. For LEED criteria related to waste management, follow the procedure outlined in section 018113 “Sustainability Design Requirements”.

END OF SECTION
SECTION 030413 - COMMON SUBMITTAL REQUIREMENTS FOR CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:
   1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.
   1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:
   1. Shop Drawings.
   2. Product Data.
   3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
   a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Refer to Section 01330 for quantity of days allowed for review.
2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR’S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER’S AND GENERAL CONTRACTOR’S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect’s staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:

1. Action Codes Permitting Use:
   a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
   b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
   c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect’s notations and Contract Document requirements.
d. **Code AN-R - Approved as Noted - Resubmit:** Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.

2. **Action Code Prohibiting Use:**
   a. **Action Code REJ - Not Approved:** The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. **Action Code for Items Not Required:**
   a. **Action Code X - Not Requested by Contract Documents:** The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. **Informational Submittals:** For Architect's information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

1. **Action Code for Information Only:**
   a. **Action Code INF - Information Only - Received:** The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned un-reviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.
   1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 **SUBMITTAL TRANSMITTAL REQUIREMENTS**

A. **Submittal Transmittal shall be a PDF file in electronic format.** It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.
   1. **Submittal Numbering:** See below.
   2. **Contact Information:** Full Name, Phone Number and Email Address.

B. **Submittal Definition**
   1. Each submittal consists of items from only ONE Specifications section.
2. Complete Submittal: If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.

3. Partial Submittals: If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).

4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.

C. Submittal Numbering

1. Number submittals as described below to assist tracking.

2. Number each submittal in the format nnnnnn-nn.

   a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.

   b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.

   c. P-Number for Partial Submittals: Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.

   d. R-Number for Re-submittals: Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.

   e. Examples:

3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS

A. Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.

B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:

   1. Submittal Number: See Submittal Numbering in Submittal Transmittal Requirements paragraph.

D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION
SECTION 031100 - CONCRETE FORMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Responsibility for design, engineering, construction, maintenance, completeness, safety, and adequacy of removable formwork.
   2. Formwork required for cast-in-place concrete, with shoring, bracing and anchorage.
   3. Items, materials, operations and methods including labor, equipment and incidentals.
   4. Coordinate installation of items furnished under other sections.

B. Related Sections:
   1. Section 031500 - Concrete Accessories.
   2. Section 032000 - Concrete Reinforcement.
   3. Section 033000 - Cast-in-Place Concrete.
   4. Section 053100 - Steel Decking.

1.2 REFERENCES

B. ACI 301 - Specifications for Structural Concrete for Buildings.
C. ACI 318 - Building Code Requirements for Structural Concrete.
D. ACI 347 - Guide to Formwork for Concrete.
E. PS1 - Construction and Industrial Plywood.
F. AISC Code of Standard Practice for Steel Buildings and Bridges

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Submit shop drawings, prepared by or under the supervision of a qualified professional engineer and the provisions of this Section. Design and engineering of formwork are Contractor's responsibility.
   1. Include plans, elevations, sections and complete details to clearly describe, at ample scale, all work to be provided. Detail openings, curbs, pads, trenches, sleeves, and other formed features for all items shown or referred to in the contract documents.
   2. Indicate locations and spacings of form ties in exposed finish concrete.

C. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
   1. Location of construction joints is subject to approval.
1.4 INFORMATIONAL SUBMITTALS

A. Material Certificates: For each of the following, signed by manufacturers:
   1. Form materials and form-release agents

1.5 QUALITY ASSURANCE

A. Applicable Standards: ACI 347 "Guide to Formwork for Concrete" and ACI 301 "Specifications for Structural Concrete for Buildings".

B. Allowable Tolerances: Design, construct and maintain formwork to insure completed work within tolerance limits specified in ACI 301 and ACI 117, unless more stringent tolerances are given in this specification, with stipulation that no tolerances specified for horizontal or vertical building lines or footings should be construed to permit encroachment beyond legal boundaries.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

A. General: Provide formwork units with sufficient thickness and stiffness to resist plastic concrete loads without detrimental deformation.

B. Forms for Exposed Smooth-Formed Finish Concrete: Construct formwork for exposed concrete surfaces with form-facing panels that will provide continuous, true, and smooth exposed concrete surfaces. Furnish in largest practicable sizes to minimize number of joints and to conform to joint system shown on Drawings. Form corners with 3/4 inch by 3/4 inch chamfer strips, mitered at changes in direction.
   1. Plywood, metal, or other approved panel materials
   2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:
      a. B-B (Concrete Form), Class 1 or better, mill oiled and edge sealed.

C. Forms for Unexposed Rough-Formed Finish Concrete: Form concrete surfaces which will be unexposed in finished structure with plywood, lumber, metal or other acceptable material. Provide lumber dressed on at least 2 edges and one side for tight fit.

D. Backing for Forms: Structurally sound lumber or metal frame, solid, straight and free of defects that may impair its strength.

E. Forms for Cylindrical Columns, Pedestals and Supports:
   1. Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that will produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class.
   2. Reusable round column forms made from fiberglass. Flanges on each side of vertical joints shall be pre-drilled for exact alignment and fitted with bolts and wedges. They shall be constructed to ensure specified formwork surface class.

F. Void Forms: Biodegradable paper surface, treated for moisture resistance, structurally sufficient to support weight of plastic concrete and other superimposed loads.
2.2 ACCESSORIES FOR REMOVABLE FORMS

A. Form Ties: Factory-fabricated, adjustable-length, removable or snap-off metal or glass-fiber-reinforced plastic form ties, designed to resist lateral pressure of fresh concrete on forms without form deflection, and to prevent spalling concrete surfaces upon removal.
   1. Provide ties so that portion remaining within concrete after removal of exterior parts is at least one inch from outer concrete surface.
   2. Spreader cones on ties shall not be larger than one inch in diameter.
   3. At exposed finish concrete provide form ties with plastic cones and plastic setback plugs, color as selected, with equal spacing in horizontal and vertical line.
   4. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

B. Chamfer and Reveal or Recess Strips: Wood, metal, PVC, or rubber strips. Triangular chamfer strips shall be 3/4 inch by 3/4 inch. Round chamfer strips shall have 3/4 inch radius. Size reveal or recess strips as noted. Wood strips shall have planed faces.

C. Rustification Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

D. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, nor adversely affect concrete surfaces, and will not impair subsequent treatment of surfaces requiring bond or adhesion, nor impede wetting of surfaces to be cured with water or curing compounds.

PART 3 - EXECUTION

3.1 DESIGN

A. Removable Forms: Design for vertical and lateral loads and pressures, including static, dynamic and construction loads, as outlined in the ACI Standard “Guide to Formwork for Concrete” (ACI 347). Contractor is solely responsible for the design, engineering, construction, maintenance, completeness, safety, and adequacy of all removable formwork.

B. Tolerances: Design formwork so concrete members and structures are of size, shape, alignment, elevation and position indicated, within allowable tolerances of ACI 117 or those specified.

C. Surface Irregularities: Limit concrete surface irregularities, designated by ACI 347R as abrupt or gradual, as follows:
   1. Class C, 1/2 inch – General conditions.
   2. Class D, 1 inch – Foundations permanently concealed to view.

D. Openings: Design formwork with temporary openings at locations as required for inspections and to permit removal of extraneous materials before placing concrete.

E. Removal: Design forms for safety in removal and with proper sequence without damage to concrete. Forms should be easily removed without hammering or prying against concrete surfaces.
F. Adjustment: Design positive means of adjustment (wedges or jacks) for shores and struts to correct settlements or facilitate dismantling of formwork.

G. Foundation: Design satisfactory foundations for formwork supported on ground to carry loads imposed during construction, without appreciable settlement.

H. Joints: Design with minimum number of joints and with joints sufficiently tight to prevent leakage of grout or cement paste.

3.2 ERECTION OF REMOVABLE FORMS

A. Verify lines, levels, measurements, elevation and center locations before proceeding with formwork.

B. Provide for openings, offsets, keyways, recesses, moldings, rustications, reglets, chamfers, blocking, screeds, bulkheads, anchorages, inserts and other features required. Determine sizes and locations from trades providing such items.

C. Construct forms of materials selected to obtain required finishes.

D. Provide crush plates or wrecking plates where stripping may damage cast concrete surfaces.

E. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical or where slope is too steep to place concrete with bottom forms only.

F. Kerf wood inserts used for forming keyways, recesses, and similar features to prevent swelling and assure ease of removal.

G. Do not use rust-stained steel form-facing material.

H. Locate temporary openings in forms as inconspicuous as possible, consistent with project requirements. Brace closures and set tightly to forms to prevent loss of concrete mortar.

I. Provide permanent openings in forms where shown or required to accommodate other work, including Mechanical and Electrical Work.

J. Erect, support, brace and maintain formwork and falsework to safely support vertical, lateral, and asymmetrical loads and forces until they can be supported by in-place concrete structures.

K. Set edge forms or bulkheads and intermediate screed strips for slabs to achieve required elevations and contours in finished slab surfaces. Provide and secure units to support types of screeds required.

L. For exposed concrete, drill forms to suit approved ties and spacings and to prevent leakage of mortar around tie holes. Do not splinter forms by driving ties through improperly prepared holes.

M. For exposed concrete, do not use metal cover plates to patch holes or defects in forms.

N. Chamfer exterior corners and edges of permanently exposed concrete.

O. At intersecting planes provide sharp, clean corners without visible edges or offsets and back joints with extra studs or girts to maintain true, square intersections.
P. At changes in plane, form molding shapes, recesses and projections with smooth-finish materials, and install in forms with sealed joints to prevent displacement.

Q. Thoroughly clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt or other debris before concrete is placed. During cold weather be sure that ice and snow has been removed.

R. Retighten forms, if necessary, before and immediately after concrete is placed to eliminate mortar leaks and to maintain proper alignment. Carefully inspect falsework and formwork during and after concrete placement operations to determine abnormal deflections or signs of possible failure and make necessary adjustments to produce work of required dimensions.

S. Do not displace or damage vapor retarder.

3.3 EMBEDDED ITEMS

A. Accurately place and securely support anchorage devices and other embedded items required for adjoining work that is attached to, or supported by, cast-in-place concrete. Use setting drawings, templates, diagrams, instructions and directions furnished with items to be embedded.

B. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC’s “Code of Standard Practice for Steel Buildings and Bridges.”

C. Install reglets to receive waterproofing and to receive through-wall flashing in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions, or as indicated in drawings.

D. Install dovetail anchor slots in concrete structures as indicated.

E. Install “formsaver” reinforcement couplers only where explicitly illustrated on Drawings or approved in advance for specific applications.

3.4 WATERSTOPS

A. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening and firmly pressing into place. Install in longest lengths practicable.

3.5 APPLICATION OF FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer's instructions. Do not allow excess form release agent to accumulate in forms or come into contact with surfaces which will be bonded to fresh concrete. Apply prior to placing reinforcing steel, anchoring devices, and embedded items.

B. Do not apply form release agent where concrete surfaces are scheduled to receive special finishes or applied coverings which may be affected by agent. Soak contact surfaces of untreated forms with clean water. Keep surfaces wet prior to placing concrete.
C. Do not apply form release agent where wood graining characteristics are required on finished concrete surfaces. Leave formwork dry.

3.6 FORM REMOVAL AND REUSE

A. Do not remove forms, shores and bracing until concrete has gained sufficient strength to carry its own weight, construction live loads, and lateral loads which are liable to be imposed upon them without damage, overstress, or excessive deflection.

1. Remove load-supporting forms only when concrete has attained 75 percent of required 28 day compressive strength, provided construction is reshored.

B. Remove formwork progressively and in accordance with code requirements so that no shock loads or unbalanced loads are imposed on structure.

C. Forms not directly supporting weight of concrete may be removed after cumulatively curing at not less than 50 degrees F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations and curing and protection operations need to be maintained.

D. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against concrete surfaces. Repair or replace, as directed, all damaged work.

E. Clean and repair surfaces of forms to be reused. Store removed forms used for exposed concrete in manner that surfaces to be in contact with fresh concrete will not be damaged. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for reuse on exposed surfaces.

F. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

G. Earth retaining walls: Do not backfill against walls until all work is in place which braces the top and bottom of walls against lateral displacement and until concrete has attained its design strength.

3.7 SHORES AND RESHORES

A. Comply with recommendations in ACI 347R and ACI 301 for design, installation, and removal of shoring and reshoring.

1. Do not remove shoring or reshoring until measurement of slab tolerance is complete.

B. Reshore structural members where required due to design requirements or construction conditions and as required to permit progressive construction. Contractor must perform at no cost to Owner, all tests and calculations needed to show when forms, formwork supports, shores and re-shores can be removed without endangering the structure.

C. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.
3.8 FIELD QUALITY CONTROL

A. Inspection is subject to compliance with requirements affecting finish results only. Adequacy of formwork and shores to support necessary vertical and lateral loads and pressures is sole responsibility of Contractor.

B. Testing and Inspection: Owner will engage qualified special inspectors in accordance with Section 01 45 33.
   1. Qualifications: The minimum category of special inspector required to perform services outlined below are noted by qualifications in parentheses. The definitions of the categories of special inspector are included in Section 01 45 33.

C. On a periodic basis, verify formwork for all concrete, excluding slabs on grade, strip footings without transverse reinforcement and topping slabs, will result in member size, location and configuration as described on the contract documents, only as it affects the structural integrity of the concrete elements to be placed. (Technical II)

END OF SECTION
SECTION 031500 - CONCRETE ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Concrete accessories and related materials for cast-in-place concrete.
   2. Coordinate Work in this Section with requirements of Section 03 11 00 and 03 30 00.

B. Related Sections:
   1. Section 031100 - Concrete Forming.
   2. Section 032000 - Concrete Reinforcing.
   3. Section 033000 - Cast-in-Place Concrete.
   4. Section 079200 - Joint Sealants.

1.2 SUBMITTALS

A. Product Data: For each product.

B. Certificates: Provide a letter stating each product specified in this Section has been evaluated and found compatible with other sections.

PART 2 - PRODUCTS

2.1 UNDERSLAB VAPOR BARRIERS

A. (UVB-3) Under-Slab Vapor Barrier: ASTM E 1745, Class A, except with maximum water vapor permeance of less than 0.01 perms before and after conditioning tests per ASTM E 1745, Sections 7.1.1 - 7.1.5.
   1. Minimum Thickness, ACI 302: 15-mil
   2. Maximum Water Vapor Permeance, ASTM E 154: 0.01 perms
   4. Puncture Resistance, ASTM D 1709: 2200 grams
   5. Manufacturers and Products:
      a. Epro Services: Ecoshield E15
      b. Raven Industries: VaporBlock VBLP15.
      c. Reef Industries: Griffolyn 15 Mil Green.
      d. Stego Industries: Stego Wrap 15 mil.
      e. Viper: VaporCheck II 15 mil.

B. Vapor Barrier Accessories: Provide accessories manufactured by or recommended in writing by vapor barrier Manufacturer for sealing seams, penetrations and perimeter edges, including; seam tape, mastics, edge termination bar, double-sided tape, and other special tapes and accessories for complete under-slab vapor barrier assembly.
1. Seam Tape: 4-inch minimum width; water vapor transmission less than 0.3 perms per ASTM F 1249 or ASTM E 96.
2. Pipe Boots: Construct pipe boots from vapor barrier material and pressure sensitive tape in accordance with Manufacturer's instructions.

2.2 EXPANSION JOINT FILLERS

B. Expansion Joint Fillers (Backing for Sealant): Flexible, compressible, closed-cell polyethylene foam, not less than 10 psi compression deflection.

2.3 WATERSTOPS

A. Self-Expanding Strip Waterstops: Manufactured rectangular or trapezoidal strip, sodium bentonite or other hydrophylic material for adhesive bonding to concrete.

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
   a. Volclay Waterstop-RX; Colloid Environmental Technologies Co.
   b. Conseal CS-231; Concrete Sealants Inc.
   c. Swellseal Joint; De Neef Construction Chemicals (U.S.) Inc.
   d. Hydrotite; Greenstreak.
   e. Superstop; Progress Unlimited Inc.

B. Provide factory fabricated waterstop intersections, leaving only straight butt joint splices for the field.

2.4 INSERTS

A. Dovetail Anchor Slots: Fabricate from not less than 22 gauge galvanized steel with one inch wide back by one inch deep with 5/8 inch throat. Nail holes 4 inch o.c.

1. Provide complete with fibrous, waterproof slot sealer or removable foam slot filler.
2. Acceptable Manufacturers and Products:
   a. Gateway Beehive Slot.
   b. Heckman Building Products No. 100.

B. Continuous Concrete Inserts: 12 gauge minimum cold-formed galvanized or painted steel, “U” section to support 2000 pound minimum allowable point load.

1. Acceptable Manufacturers:
   a. Cooper B-Line
   b. Unistrut

C. Wedge Type Shelf Angle Inserts: Malleable iron castings with wedge shaped holding faces to receive 5/8 inch askew head bolt.

1. Do not use inserts complete with askew head bolts, flat washers, nuts and horseshoe shims.
2. Acceptable Manufacturers:
   a. Dayton Superior.
   b. Gateway Building Products.

D. Expansion Sleeves: Where reinforcing extends from concrete mass to support adjacent slab, with provisions for expansion required, provide metal sleeve at each bar to permit movement.
   1. Provide at stoops and elsewhere as indicated.

E. Reglets: Form reglets in concrete exposed to weather (for membranes, flashing and similar items), with removable forms (inserts). Form reglets, wedge-shaped to preserve sharp edges of concrete with twice material thickness, but not less than 3/8 inch.
   1. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.
   2. Do not use metal reglets, except where specifically approved.
   3. For concealed reglets use 24-gauge galvanized metal flashing reglet #307.
   4. Acceptable Manufacturers:
      a. Hohmann-Barnard.
      b. Gateway Building Products.
      c. Heckman Building Products.

F. Dowel Caps: Plastic material of size recommended for rod diameter.

G. Cast-Metal Stair Nosing: Cast iron with an integral abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both.
   1. Fabricate units in lengths necessary to accurately fit openings or conditions.
   2. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
   3. Apply bituminous paint to concealed surfaces of cast-metal units set into concrete.

H. Refer to Section 05 50 00 for embeds and other fabricated items for insertion into concrete.

2.5 CURING AND SEALING MATERIALS

A. Manufacturers: Subject to compliance with the requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, those listed below.

B. Moisture-Retaining Cover: ASTM C 171, polyethylene film, curing paper or white burlap-polyethylene sheet.

C. Water: Potable.

D. (CS-1) Clear, Non-residual, Waterborne, Membrane-Forming Curing Compound: Apply in accordance with manufacturer's recommendations and at coverage rate meeting ASTM C 309, Type 1, Class B, 18 to 22 percent solids. To be used at contractor's option in lieu of moist cure, in accordance with ACI 301, for floors to receive tile work, toppings, liquid applied waterproofing, synthetic flooring or other surface treatments for which bonding could be impaired by surface residue.
   1. L&M Cure R; L&M Construction Chemicals, Inc.
   2. 1100 Clear; W.R. Meadows.
   3. SpecRez; SpecChem, LLC
2.6 BEARING PADS

A. Non-Slip Plastic Bearing Pads: High-density plastic bearing pads with one rough surface for placement against hardened concrete and one smooth surface to be placed against adjacent bearing pad to create a slide bearing.
   1. Minimum pad thickness: 1/4 inch.
   2. Acceptable Manufacturers and Products:
      a. Con-Serv: Type CSB
      c. Dayton Superior: P-82 Bearing Strips

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install concrete accessories and related materials as specified in Section 03 11 00 - Concrete Forming, Section 03 20 00 - Concrete Reinforcing and Section 03 30 00 - Cast-in-Place Concrete.

END OF SECTION
SECTION 032000 - CONCRETE REINFORCING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Reinforcing bars for cast-in-place concrete.
   2. Smooth bar dowels for concrete slab joints.
   3. Welded steel wire fabric where noted in the drawings.
   4. Ties and supports for reinforcement.
   5. Fiber reinforcement where noted in the Drawings.

B. Related Sections:
   1. Section 031100 - Concrete Forming.
   2. Section 031500 - Concrete Accessories.
   3. Section 033000 - Cast-in-Place Concrete.

1.2 REFERENCES

B. ACI 315 - Standards on Details and Detailing of Concrete Reinforcement.
C. ACI 318 - Building Code Requirements for Structural Concrete.
D. AWS D1.4 - Structural Welding Code Reinforcing Steel.
F. CRSI - Placing Reinforcing Bars.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of manufactured material and product indicated

B. Shop Drawings:
   1. Shop Drawings: Submit in accordance with ACI 315, “Details and Detailing of Concrete Reinforcement”.
   2. Include placing drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing and hoop spacing.
   3. Show locations, type and quantities of bolsters, spacers, chairs, support bars and other accessories.
   4. Show concrete cover dimension from face of form to reinforcing bars.

1.4 INFORMATIONAL SUBMITTALS
A. Welding Certificates.

B. Material Certificates: For each of the following, signed by manufacturers:
   1. Steel reinforcement and accessories

1.5 LEED SUBMITTALS

A. Submit required product data and documentation in accordance with Section 01 81 13 - Sustainable Design Requirements and Section 01 33 00 - Submittal Procedures:
   1. Product Data for LEED MRc 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
      a. Include statement indicating costs for each product having recycled content.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Perform concrete reinforcing work in accordance with Concrete Reinforcing Steel Institute's recommended practices.

B. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM C1077 and ASTM E329 to conduct the testing indicated, as documented according to ASTM E548.
   1. Allow specified inspector to observe reinforcing steel in place prior to pouring of concrete for each section.
   2. Do not pour concrete until permission to proceed with placement of concrete has been granted by specified inspector.
   3. Notify specified inspector sufficiently in advance of scheduled time for pouring of concrete to allow observation to be made and corrections or adjustments completed, where required.

C. Welding: Qualify procedures and personnel according to AWS D1.4, "Structural Welding Code-Reinforcing Steel."

1.7 DELIVERY, STORAGE AND HANDLING

A. Materials shall be new, free of rust, loose scale or other coating that would reduce or destroy bond.

B. Deliver reinforcement bundled, tagged and marked. Tags to indicate bar size, lengths, and other information corresponding to markings shown on placement diagrams.

C. Deliver, store and handle reinforcement to prevent bending, damage and accumulation of dirt or excessive rust.

D. Avoid damaging coatings on steel reinforcement.
PART 2 - PRODUCTS

2.1 STEEL REINFORCEMENT

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 50 percent.

B. Reinforcing Bars: ASTM A615, Grade 60, deformed.

C. Low-Alloy-Steel Reinforcing Bars: Reinforcing Steel to be Welded or Special Ductile Reinforcement: ASTM A706, Grade 60, deformed.

D. ASTM A706, Grade 80, deformed, where designated on Contract Documents.

E. Plain-Steel Welded Wire Reinforcement: ASTM A185 or ASTM A1064, fabricated from as-drawn plain-steel wire into flat sheets. Rolls are not permitted.

F. Deformed-Steel Wire and Deformed Bar Anchors: ASTM A496 or ASTM A1064.

2.2 REINFORCEMENT ACCESSORIES

A. Wire Bar Type Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture according to CRSI’s “Manual of Standard Practice”.

B. Supports: For slabs-on-grade with steel reinforcement use supports with sand plates, precast concrete chairs, or horizontal runners where base materials will not support chair legs.

C. Plastic-Tipped or Stainless Steel Legs: For concrete surfaces exposed to view or weather where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected or CRSI Class 2 stainless-steel bar supports. Hot dip galvanized support accessories may be used against formed surfaces not exposed to view or to weather.

D. Precast Concrete Chairs: Use over membrane waterproofing or underslab vapor retarder/barrier to prevent penetration of membrane or barrier.

E. Smooth Bar Dowels: ASTM A615, Grade 60, plain round bars. Cut bars true to length with ends square and free of burrs.

F. Mechanical Splice Systems: Mechanical connectors consisting of threaded type coupler forged from high quality steel meeting requirements of ACI 318 for mechanical splices.
   1. Use only where explicitly referenced on Drawings or as approved by Engineer.
   2. Mechanical Splice Systems shall have current ICC-ES report approval in accordance with ICC Acceptance Criteria AC133.
   3. All couplers shall be installed per the manufacturer’s approved procedures.
   4. Acceptable Manufacturers and Products:
      a. Lenton Couplers: Erico, IAPMO UES ER-0129.
2.3 FABRICATION

A. Fabricate steel reinforcement in accordance with ACI 315, CRSI’s “Manual of Standard Practice” and accepted shop drawings.

B. Do not re-bend or straighten steel reinforcement except where specifically accepted.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Underfloor Vapor Retarders/Barriers: When chairing reinforcement on top of underfloor vapor retarders, use only concrete brick type reinforcing bar supports, or provide 6 in x 6 in protective pads of asphaltic hardboard or other material recommended by the manufacturer. Do not displace or damage vapor retarder.

B. After installation of reinforcement but before pouring concrete, check for damage to underfloor vapor retarder/barrier. Repair any damage and reseal underfloor vapor retarder before placing concrete in accordance with Section 03 30 00.

C. Clean steel reinforcement to remove loose rust and mill scale, earth, ice and other foreign materials which will reduce or destroy bond with concrete.

D. Install concrete reinforcement in accordance with reviewed shop drawings and CRSI recommended practices.

E. Accurately position, support, and secure steel reinforcement against displacement by formwork, construction, or concrete placement operations.

F. Locate and support steel reinforcing by metal bolsters, spacers, chairs and hangers to maintain specified concrete cover. Securely tie bars and supports together with 16 gauge wire to hold steel reinforcement accurately in position during concrete placement operations. Set wire ties so that twisted ends are directed away from concrete surfaces.

G. Installing bars into wet concrete is prohibited.

H. Provide bar supports in sufficient number and heavy enough to carry steel they support. Place no bar more than 2 inches beyond last leg of continuous bar support. Do not use bar supports to support runways for concrete buggies, or similar loads.

I. Steel reinforcement partially embedded in concrete shall not be field bent, except as indicated or permitted by Structural Engineer.

J. For walls reinforced on both faces, provide spreader bars and chairs to surfaces of forms on each side at spacings not to exceed 8 feet in either direction. For walls with single layer of reinforcing, provide chairs each side at spacings not to exceed 8 feet in either direction.

K. Splice bars only where shown or noted. Comply with requirements of ACI 318 for minimum lap of bars and stagger, unless noted otherwise. Weld or mechanically couple splices in bars larger than #11, or where #11 bars are spliced to larger size bars. Comply with requirements of AWS D1.4 for welding of bars.
L. Install welded wire fabric in longest practicable lengths on bar supports spaced to minimize sagging. Offset end laps in adjacent sheets to prevent continuous laps in either direction. Lap edges and ends of adjoining sheets at least two mesh spacings. Lace overlaps with wire. Locate fabric as indicated on Drawings.

M. Install smooth bar dowels in concrete slab joints where shown. Center dowels on joint, positioned at center of slab depth and aligned perpendicular to face of joint both vertically and horizontally. Within 30 minutes of placement of adjacent concrete along doweled joints, apply thin uniform coating of liquid asphalt MC-250 or road tar RT-6 on free ends of dowels.

N. Exposed reinforcing steel after concrete has been placed, indicating steel is not properly located, will be sufficient cause for rejection, removal and replacement of concrete section.

O. Tack welding of reinforcing steel is prohibited. Reinforcement damaged by arc strikes or welding shall be replaced.

3.2 FIELD QUALITY CONTROL

A. Testing and Inspection: Owner will engage qualified special inspectors. On a periodic basis, inspect all reinforcing steel in all cast-in-place concrete, excluding slabs on grade, footings without transverse reinforcement, and topping slabs.
   1. Verify size and grade of reinforcing steel.
   2. Verify reinforcing bars are free of dirt, excessive rust and damage.
   3. Verify reinforcing bars are adequately tied, chaired and supported to prevent displacement during concrete placement.
   4. Verify proper clear distances between bars and to surfaces of concrete.
   5. Verify reinforcing bar size and placement.
   6. Verify bar laps for proper length and stagger and bar bends for minimum diameter, slope and length.
   7. Verify mechanical splices are placed in accordance with Contract Documents and reviewed shop drawings.
   8. Verify epoxy coating is present at locations noted on the Contract Documents, include tie wires, chairs, bolsters, etc. Verify coating damage is repaired in accordance with the Contract Documents.

B. Welding of Reinforcing Bars: On a continuous basis, visually inspect 100% of all reinforcing bar welds as the welding is performed, per AWS D1.4. Verify proper joint preparation is provided and proper electrodes are used and properly stored and dried.

END OF SECTION
SECTION 033000 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
2. Proportioning, mixing, conveying, placing, finishing, curing, and testing of cast-in-place concrete.
4. Coordinate installation of embedded items furnished and installed under other sections.

B. Related Requirements:
1. Section 031100 – Concrete Forming.
2. Section 031500 – Concrete Accessories; Underslab vapor barriers.
3. Section 032000 – Concrete Reinforcement.
4. Section 033543 – Polished Concrete.
5. Section 055000 – Metal Fabrications.
7. Section 310000 – Earthwork.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume; subject to compliance with requirements.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:
   1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit IEQ 4.3: For curing and sealing compounds, documentation including printed statement of VOC content.
   3. Design Mixtures for Credit ID 1.1: For each concrete mixture containing fly ash as a replacement for Portland cement or other Portland cement replacements, and for equivalent concrete mixtures that do not contain Portland cement replacements.

C. Submit mix design for each type and strength of concrete. Proportion designs in accordance with "Proportioning on the Basis of Field Experience and/or Trial Mixtures" of ACI 318.

D. Each mix design shall contain the following information:
   1. Mix number (which will correspond to mix ticket on trucks delivered to site) and location of concrete on project.
   2. Applicable mix specifications including:
      a. Design strength.
      b. Slump.
      c. Air content.
      d. Unit weight.
   3. Mix ingredients including quantities, ASTM designations, and sources for:
      a. Cementitious materials including fly ash, silica fume, and GGBFS.
b. Aggregates.
c. Water.
   1) Indicate amounts of mix water to be withheld for later addition at Project Site.
d. Admixtures (including manufacturer).

4. Test results:
   a. Compressive strength results of trial batches or historical test data.
   b. Statistical computations showing required average strength of mix.
   c. Aggregate property results for exterior horizontal concrete in accordance with Article 2.1.C of this Section.
   d. Unit weight.
   e. Slump.
   f. Water/cementitious ratio of mix.
   g. Air content.

5. Material Certificates: Signed by manufacturers certifying that materials comply with Project requirements.

6. Mix designs shall be signed and sealed by a Professional Engineer licensed in the State of California.

E. Include alternate mix designs when characteristics of materials, project conditions, weather, test results, or other circumstances warrant adjustments.

F. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
   1. Proposed construction joint and saw cut contraction joints locations for slab on grade.
   2. Location of joints is subject to approval of the Architect/Engineer.

G. Slab Depression Layout: Indicate locations and depths of depressed slab for terrazzo, walk-off mats, and other architectural floor finishes.

1.5 INFORMATIONAL SUBMITTALS

A. Placing, Finishing, and Curing Procedures: Detailed description of methods, materials, and equipment used to comply with requirements.

B. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

C. Flooring Coordination Plan (FCP): The General Contractor (GC) shall develop a Flooring Coordination Plan (FCP) prior to placement of any on-grade or elevated floor slabs. The GC shall conduct a pre-installation meeting to coordinate with all trades as it relates to the installation of the floor slab. The plan shall be signed by all trade representatives confirming agreement. Submittal is for information only and will not be approved or rejected. The FCP shall include the following items:
   1. Review ACI302.2 “Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring.”
   2. Concrete mix design.
   3. Discussion of delay of drying time due to re-wetting of floor slabs per on-site field conditions.
   4. Type and degree of concrete finish with respect to flooring adhesive and material.
5. Curing process.
6. Application of topical finishes such as slab curing compounds and sealers, if requested by the Contractor, with certificates of compatibility.
7. Moisture/pH testing procedure and frequency.
8. Trade representative work schedules.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Use plant mixed concrete mixed in stationary mixers.
   1. Truck mixed concrete is allowed provided procedures in ASTM C94 are followed and documented.
   2. Mix and deliver concrete in accordance with ASTM C94.
   3. Concrete plant shall have a current certificate from the National Ready Mix Concrete Association or another agency acceptable to DSA. The certification shall indicate that the plant has automatic batching and recording capabilities.

B. Installer Qualifications: Perform concrete work in accordance with ACI 318, unless specified otherwise. Installation work shall be supervised by a ACI-certified Flatwork Technician.

C. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM C1077 and ASTM E329 to conduct the testing indicated, as documented according to ASTM E548.

D. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

E. Pre-Construction Conference: Conduct conference at Project site to comply with requirements of Section 01 45 33.
   1. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, semirigid joint fillers, forms and form removal limitations, shoring and reshoring procedures, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, floor and slab flatness and levelness measurement, concrete repair procedures, and concrete protection, and curing application procedures.

PART 2 - PRODUCTS

2.1 CONCRETE MATERIALS

A. Cementitious materials and aggregates shall have a proven history of successful use together, or submit evidence satisfactory to Owner's Representative that aggregate will not react harmfully in presence of alkalis in cement.

B. Cementitious Materials. Combination of Portland cement and supplementary cementitious materials; subject to limitations specified herein.
   1. Portland cement: ASTM C150, Type I, II or V, low alkali.
2. Slag cement: ASTM C989, Grade 100 or 120. 30% replacement.

C. Coarse Aggregates:
   1. ASTM C33.
   2. Cleanliness value shall not be less than 75 when tested in accordance with California Test 227, "Evaluating Cleanliness of Coarse Aggregate".
   3. Aggregate shall contain no thin or elongated pieces. The length of any piece shall not exceed 2½ times the average thickness.
   4. Aggregate for Shrinkage Controlled Concrete shall be from one of the following sources, or approved equal: Sechelt (as supplied by Hanson), limestone (Hanson).
   5. Aggregate for Lightweight Concrete: ASTM C330, 3/8 inch size. As supplied by Hanson Sechelt sand and pumice aggregate, Trinity Expanded Concrete & Shale, or approved equal.

D. Fine Aggregates:
   1. ASTM C33.
   2. Sand equivalent shall not be less than 75 when tested in accordance with California Test 217, "Sand Equivalent".

E. Normal Weight Concrete Aggregates: (Excluding exterior horizontal concrete) ASTM C33, uniformly graded. Do not use aggregates containing soluble salts or other substances which can cause stains on exposed surfaces. Use aggregates from one source of supply corresponding to that on which selection of concrete proportions was based.

F. Aggregate Gradation: Conform to ASTM C33.

G. Mixer wash-out operations; subject to limitations specified herein.
   1. Provide 100% potable water for Architectural Concrete, Shrinkage Controlled Concrete, post-tensioned concrete, and lightweight concrete.
   2. Combined water for other uses may contain maximum 25% reclaimed water meeting requirements of ASTM C1602.

H. Water: ASTM C94. Fresh, clean, potable, free from injurious amounts of oils, acids, alkalies, salts, organic materials, or other substances that may be deleterious to concrete or steel.

2.2 ADMIXTURES

A. General: Admixtures shall be certified by manufacturer to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material and to be compatible with other admixtures and cementitious materials. Do not use admixtures containing calcium chloride or thiocyanates.

B. Manufacturers: Subject to compliance with the requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, those listed below.

C. Air-Entraining Admixtures (AEA): ASTM C260, max 6% on light weight.
   1. Euclid Chemical Company: Air-Mix.
   2. General Resource Technology: Polychem AE.
   3. Grace Construction Products: Daravair series or Darex series.
   4. BASF: MasterAir AE 90
5. Protex Industries: Protex AES.

D. Water Reducing Admixtures (WRA): ASTM C494, Type A.
   1. Euclid Chemical Company: Eucon WR-75.
   3. Grace Construction Products: WRDA.
   4. BASF: MasterPozzolith 210 or MasterPozzolith 322 N

E. Mid-Range Water-Reducing Admixtures (MRWRA): ASTM C494, Type A.
   1. Euclid Chemical Company: Eucon A+.
   4. BASF: MasterPolyheed 997 or MasterPolyheed FC100.

F. High-Range Water Reducing Admixture (HRWRA): ASTM C494, Type F or G.
   1. Euclid Chemical Company: Eucon 37 or Plastol 5000.
   3. Grace Construction Products: ADVA 100 or Daracem 100.
   4. BASF: MasterGlenium 3030 NS, 3030 NS, or 3200 HES.

G. Water Reducing and Retarding Admixture: ASTM C494, Type D.
   1. Euclid Chemical Company: Eucon Retarder-75.
   2. General Resource Technology: Polychem R.
   4. BASF: MasterPozzolith 80 or MasterPozzolith 200N.

H. Non-Corrosive, Non-Chloride Accelerator: ASTM C494, Type C or E.
   1. Euclid Chemical Company: Accelguard 80.
   4. BASF: MasterSet A 534.

I. Viscosity Modifying Admixture: ASTM C494, Type S.
   1. Euclid Chemical Company: Visctrol.
   2. General Resource Technology: Polychem VMA.
   4. BASF: MasterMatrix VMA 362.

J. Prohibited Admixtures: Calcium chloride, thiocyanates or admixtures effectively containing chloride ions (more than 0.05 percent) are not permitted. No accelerators without special permission.

2.3 BONDING COMPOUNDS

A. Bonding Compound: ASTM C1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene. Use to bond toppings to base slab.
2.4 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.
   1. Cement Binder: ASTM C150, Portland cement or hydraulic or blended hydraulic cement as defined in ASTM C219.
   2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
   3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.
   4. Compressive Strength: Not less than 4100 psi at 28 days when tested according to ASTM C109/C109M.

B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations
   1. Cement Binder: ASTM C150, Portland cement or hydraulic or blended hydraulic cement as defined in ASTM C219.
   2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
   3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.
   4. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C109/C109M.

C. Polymer-Modified, Cementitious Patching Mortar: Packaged, dry mix for repair of concrete and that contains a non-redispersible latex additive as either a dry powder or a separate liquid that is added during mixing.
   1. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C109/C109M.

2.5 CONCRETE MIXING

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 211.1 and ACI 301.

B. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C94, with exceptions specified herein, and ASTM C1116 where fibers are used, and furnish batch ticket information.
   1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

C. Admixtures: Use approved admixtures according to manufacturer's written instructions.
   1. Use chemical admixtures in concrete, as required, for placement, workability, durability, and controlled set time.
D. Air Content:
   1. Exterior exposed concrete shall contain 6 percent entrained air with maximum tolerance of plus or minus 1.5 percent.
   2. Lightweight concrete may contain 6 percent entrained air with maximum tolerance of plus or minus 1.5 percent.
   3. Do not allow air content of hard-troweled finished floors to exceed 3 percent.

E. Concrete Slump Limits: Measured according to ASTM C143 at point of placement.
   1. 4 inches without water reducing admixtures.
   2. 5 inches after addition of WRA or MRWRA.
   3. 7 inches after addition of HRWRA.
   4. A tolerance of up to one inch above indicated maximum will be allowed for one batch in any five consecutive batches tested.
   5. If the maximum water-cement ratio is not exceeded, concrete arriving at the jobsite within 60 minutes of the initial batching that has a slump less than the maximum allowed may have water added when accepted by the project inspector.
   6. Water reducing admixtures may be added to increase the slump when water cannot be added and additional slump is necessary for workability when accepted by the project inspector.
   7. Truck batch tickets shall clearly indicate maximum water permissible for adding at jobsite without exceeding the specified maximum water-cementitious materials ratio.
   8. Water shall not be added to the mix after any supplemental water reducing admixtures have been dosed into the mixer.
   9. Water shall not be added to mix after samples are taken from batches randomly selected for testing.

2.6 SOURCE QUALITY CONTROL

A. Batch Plant Inspection:
   1. An approved special inspector from the Owner’s Testing Agency shall review mix proportions with the licensed weighmaster at the start of each day’s placement and observe the first batching.
   2. Licensed weighmaster to positively identify materials as to quantity and certify to each load by ticket.
   3. Tickets shall be transmitted to the inspector of record by a truck driver with load identified thereon. The inspector will not accept the load without a load ticket identifying the mix and will keep a daily record of placements, identifying each truck, its load and time of receipt and approximate location of deposit in the structure and will transmit a copy of the daily record to the enforcement agency.
   4. At the end of the project, weighmaster shall furnish an affidavit to the enforcement agency certifying that concrete furnished conforms in every particular to proportions established by mix designs.
   5. Batch ticket must be legible.

2.7 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. 70% Portland, 30% slag.

B. Mix “A1”: High SCM mix for grade beams.
   1. Comply with all requirements for mix “A” except that compressive strength is 6,000 psi.
C. Mix “B”: For slab-on-ground, curbs and ground level equipment pads, stair pan fills.
1. Compressive strength: 4,000 psi at 28 days (ASTM C39).
2. Slump: 6 inches, plus or minus 1-inch tolerance (ASTM C143).
3. Cementitious material: Total cementitious material shall not be less than 550 lbs per cubic yard.
5. Coarse aggregate shall be from specified source for Shrinkage Controlled Concrete. Do not blend pea gravel with shrinkage controlled aggregates.
6. Admixtures: Mid-range, water-reducing admixture at necessary dosage to provide adequate slump and workability at specified water content.
7. Limit total water to 275 lbs maximum.
8. Limit water-to-cementitious material ratio to 0.45 by weight.

D. Mix "E": For lightweight structural concrete fill over steel deck, equipment pads and curbs over lightweight concrete fill over metal deck, exterior supported structural slab where noted on plans.
1. Compressive strength: 4,000 psi at 28 days (ASTM C39).
2. Slump: 4 inches, plus or minus 1-inch tolerance (ASTM C143), measured at point of placement. Slump, measured at truck, shall not exceed 7 inches and slump loss due to pumping shall not exceed 2 inches.
3. Equilibrium density: 113 lbs per cu ft, plus or minus 3 pcf (ASTM C567, quick method). Fresh density, measured at truck, shall not exceed 125 lbs per cu ft. (ASTM C138).
4. Air: 5.5%, plus or minus 1.5% tolerance, air by volume at point of placement (ASTM C173 - Volumetric Method).
5. Cementitious material: 70% Portland, 30% slag.
6. Aggregate: Mix shall contain a minimum of 1000 pounds of fully presaturated lightweight coarse aggregate per cubic yard (based on use of Trinity’s Frazier Park expanded clay aggregate).
7. Admixtures:
8. ASTM C494, Type A/F mid-range, water-reducing admixture at manufacturer's recommended mid-range dosage.
9. Provide VMA at manufacturer’s recommended dosage where required to facilitate pumping.

E. Mix F: For mud slab.
1. Compressive strength: 1,500 psi at 7 days (ASTM C39).
2. Slump: 4 inches (ASTM C143), plus or minus 1-inch tolerance.
3. Aggregate size: Size 7 (1/2 inch) coarse aggregate.
4. Fiber reinforcing: Add synthetic macro-fibers at a dosage of 5 lbs per cu yd.

F. Watertight Concrete: For sumps, pits and where otherwise designated.
1. Same as Mix "B", except as otherwise noted.
2. Admixtures: Add crystalline waterproofing admixture at manufacturer’s recommended dosage rate.

G. Patching Mortar: One part Portland cement to two parts sand. At exposed surfaces, substitute white cement as necessary to match color of surrounding concrete.
1. Intended for use for patching of form ties and bug holes. Not suitable for repair of large defects; provide pre-packaged repair mortar suitable for size and shape of defect and approved by Owner's Representative.
H. Polished Concrete: Refer to Section 033543 for additional mix requirements, aggregates, and finishing, grinding and polishing for normal- and light-weight concrete mixes indicated to have polishing.

PART 3 - EXECUTION

3.1 INSTALLATION OF UNDERFLOOR VAPOR BARRIERS

A. Install vapor barrier (UVB-3) directly below all new interior slabs.
   1. Place vapor barrier over underfloor material specified in Division 31.
   2. Do not cover vapor barrier with sand or aggregate.
   3. Pour concrete slab directly over vapor barrier.

B. Examine substrates and conditions, with Installer present, for compliance with requirements for Sections in which substrates and related work are specified and other conditions affecting performance.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

D. Verify that sleeves, ties, and other penetrating components which pass through surfaces to receive barrier are rigidly installed.

E. Clean substrates of substances harmful to vapor barriers, including removing projections capable of puncturing vapor barriers.

F. Place, protect, and repair vapor barrier sheets in accordance with manufacturer’s instructions and ASTM E1643.
   1. Unroll vapor barrier with the longest dimension parallel with the direction of the pour.
   2. Lap vapor barrier over footings and seal to foundation walls.
   3. Overlap joints 6 inches and seal with pressure sensitive tape.
   4. Seal penetrations including pipes, conduits, and ducts with pipe boots and pressure sensitive tape.
   5. No penetration of the vapor barrier is allowed except for reinforcing steel and permanent utilities.
   6. Terminate vapor barrier at walls with sealant.
   7. Repair damaged areas by cutting patches of vapor barrier, overlapping damaged area 6 inches and taping all four sides with pressure sensitive tape.

3.2 PLACING CONCRETE

A. Place concrete in accordance with ACI 301. Consolidate concrete in accordance with ACI 309 using high frequency vibrators.

B. Clean forms, reinforcing and accessories and dampen forms immediately prior to placing concrete.

C. Schedule concrete deliveries to ensure that concrete in each load is placed within 90 minutes after mixing water is added.
D. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.

E. Deposit concrete as near as practicable to its final position to avoid segregation due to rehandling or flowing, in layers not exceeding 18 inch in depth. Deposit concrete continuously or in layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness.
   1. Consolidate placed concrete with mechanical vibrating equipment. Use equipment and procedures for consolidating concrete recommended by ACI 309R.
   2. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations no farther than the visible effectiveness of the vibrator. Place vibrators to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mix constituents to segregate.
   3. Do not insert vibrators to bottom of slabs-on-grade with underfloor vapor barriers to avoid damaging this membrane.

F. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
   1. Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
   3. Screed slab surfaces with a straightedge and strike off to correct elevations.
   4. Slope surfaces uniformly to drains where required.
   5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, free of humps or hollows, before excess moisture or bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

G. Do not allow concrete to fall freely more than 5 feet. Use tremies, chutes or elephant trunks where necessary.

H. Do not use concrete that has partially hardened or been contaminated by foreign materials, nor concrete that has been retempered or remixed after initial set.

I. Before depositing new concrete on or against concrete that has set at construction joints, clean, wet and apply neat cement slurry to existing surfaces. Tighten forms prior to resuming pouring.

J. Exercise care to prevent splashing of forms or reinforcing with concrete above level of concrete being placed.

K. Clean reinforcement projecting above or out of concrete immediately after completion of particular unit of pour.

L. Do not place concrete under adverse weather conditions unless adequate protection is provided. Refer to ACI 301, for weather restrictions and placing temperatures.

M. ITL shall monitor vibrations during pile driving or other significant sources of vibration to determine minimum distance to be maintained from concreting operations to avoid damage to freshly placed concrete.
N. Comply with ACI 301 for installation of concrete topping mixtures.

3.3 CONSTRUCTION, CONTRACTION AND EXPANSION JOINTS

A. Provide construction joints when stoppage of concreting operations occurs.

B. Continue reinforcing steel across construction joints unless noted or detailed otherwise.

C. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect/Engineer.
   1. Unless detailed otherwise, locate horizontal construction joints in walls and columns at underside of floor slabs and beams.

D. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Where contraction joint spacings are not specifically shown they shall be spaced approximately 15 feet on centers at interior locations where joints will be exposed or under non-resilient floor covering. At interior locations below resilient finish or carpet spacings may be increased to approximately 20 feet. Interior panels shall be near-square with short: long side ratio not less than 2:3. At exterior locations spacings of contraction joints shall not exceed 10 feet on centers and short-long side ratio shall not be less than 3:4. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness, as follows:
   1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Sawcut joints in concrete slabs-on-grade as soon as the slab will support the weight of the saw and operator without disturbing the final finish. Sawcutting can normally occur from 0 to 2 hours after final finishing. Cut 1/8 inch wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.
   2. Provide very lightly rounded edges at construction, control and expansion joints where slab joint will be exposed.
   3. Where sawcut control joints in exterior slabs-on-grade are shown, provide in accordance with ACI 301, 1/4 depth of slabs unless shown otherwise. Cut joints to their full depth as soon as condition of concrete will permit, in 2 or more passes, with first pass cut 1/2 inch deep.

E. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
   1. Terminate full-width joint-filler strips not less than 1/2 inch nor more than 1 inch below finished concrete surface where joint sealants, specified in Section 07 90 00 - Joint Protection, are indicated.
   2. Install joint-filler strips in lengths as long as practicable. Where more than 1 length is required, lace or clip sections together.

F. Provide vertical construction, control, and expansion joints in walls as detailed. Pour sections alternately with minimum waiting period of 48 hours between adjacent pours. Unless noted otherwise, locate joints midway between columns. Do not locate joints within 5 feet of corner, wall intersection or column. Unless noted otherwise locate vertical contraction joints in walls at 30 feet maximum spacing.

G. Special Roughened Construction Joints (SRCJ): For construction joints noted in the drawings as special roughed construction joints, in addition to keying, hardened concrete joint face shall
be cleaned totally free from laitance by bush hammering or sandblasting to provide rough, sound surface with roughness amplitude not less than 1/4 inch between projecting aggregate faces and recessed sand-cement matrix.

H. Install waterstops in concrete joints where noted in accordance with Section 03 11 00.

3.4 FINISHING FLOORS AND SLABS

A. Finish bare concrete floors (adjacent to floors with other surfacing) so concrete surface is level with other finishes, unless otherwise noted.

B. At areas to receive floor covering, grind smooth joints between slabs on grade and structural slabs and between existing and new surfaces to eliminate unevenness and to provide smooth, level surface across joints. Finish with plastic blades.

C. Wetting the concrete surface during finishing operations is prohibited.

D. Power floating with troweling machines equipped with normal trowel blades is prohibited.

E. Use caution when finishing lightweight concrete slabs to maintain trowel blades at shallow angle as possible during final finishing operations.
   1. Do not provide a hard steel trowel finish to lightweight concrete slabs or SOG.

F. Protect finished surfaces from damage. Keep free of abrasive materials.

G. In areas where water will be present (interior and exterior) place and finish slabs so areas will drain and water will not stand in puddles. Conform to slopes shown. At structural slabs, verify elevations of drains to ensure drains will be at low points. Where elevations and slopes are not indicated, generally slope floors 1/8 inch per foot uniformly to drains, unless otherwise directed by Architect.

H. Finish and measure surface so gap at any point between concrete surface and an unleveled, freestanding, 10-foot-long straightedge resting on 2 high spots and placed anywhere on the surface does not exceed 1/8-inch.

I. Apply slab finish to Floor Profile Number tolerances listed unless specifically noted otherwise on Drawings, according to ASTM E1155 “Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers” for randomly trafficked floor surfaces.
   1. Refer to ACI 302, Chapter 8 and Table 8.15.3, for recommended typical procedures to attain specified Floor Profile Numbers.

J. General Finishing Requirements: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces as appropriate to attain slab finish specified.
   1. Utilize wet-screed guides, dry-screed guides, and/or edge forms for initial strikeoff set with optical or laser instruments as appropriate to attain specified Floor Profile Number. Check elevation after initial strikeoff and repeat as necessary.
   2. Smooth and restraighten surface using 8 to 10 foot wide bull float, darby, or modified highway straightedge.
a. Apply in two directions at 45 degree angle to strip for Overall Floor Flatness, FF30 or greater.

3. Wait until bleed water sheen has disappeared and concrete can sustain finishing operations without digging in or disrupting the levelness of the surface.

4. Float surface with one or more passes using a power float (float shoe blades or pans) or by hand floating if area is small or inaccessible to power driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.

5. Uniformly slope surfaces to drains.

K. (CONC FIN-1) Hard Trowel Finish:

1. Follow General Finishing Requirements for initial procedures.
2. Restraighten surface if required following paste-generating float passes using 10-foot wide highway straightedge. Apply in two directions at 45 degree angle to strip. Use supplementary material to fill low spots.
3. Consolidate concrete surface, uniform in texture and appearance, with three or more passes using power trowel. Hand trowel areas inaccessible by power trowel.
4. Grind smooth any surface defects that would telegraph through applied floor covering system.

L. (CONC FIN-2) Non-Slip Broom Finish:

1. Follow General Finishing Requirements for initial procedures.
2. While still plastic, slightly roughen concrete surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

M. (CONC FIN-3) Non-Slip Abrasive Finish:

1. Apply at rates recommended by the manufacturer, but not less than 25 pounds per 100 square feet.
2. Verify all procedures noted below are in compliance with manufacturer’s written instructions. Notify Architect of any discrepancies requiring resolution.
3. Follow General Finishing Requirements, steps 1 through 3, for initial procedures.
4. Break the surface using a power trowel with float shoes or attached pan.
5. Evenly distribute approximately two-thirds of the specified amount of non-slip aggregate with mechanical spreader.
6. After applied material has absorbed moisture, float surface using hand wooden floats. Take care not to tear through into the underlying concrete.
7. Apply remaining one-third of dry-shake hardener. Tamper aggregate flush with surface, but do not force below surface. Float surface in a like manner.
8. If needed, trowel until the desired surface finish is achieved.
9. After curing, lightly work surface with a steel wire brush or an abrasive stone and water to expose slip-resistive aggregate.

N. (CONC FIN-4) Light Trowel Finish:

1. Follow General Finishing Requirements for initial procedures.
2. Restraighten surface if required following paste-generating float passes using 10-foot wide highway straightedge. Apply in two directions at 45 degree angle to strip. Use supplementary material to fill low spots.
3. Consolidate concrete surface, uniform in texture and appearance, with one to three passes using power trowel. Hand trowel areas inaccessible by power trowel.
4. After final trowel, concrete finish shall have a light texture. Avoid burnished finish. Coordinate finish with flooring subsurface requirements.
5. Grind smooth any surface defects that would telegraph through applied floor covering system.

O. (CONC FIN–5) Trowel and Fine Broom Finish:
1. Follow General Finishing Requirements for initial procedures.
2. Consolidate concrete surface, with one pass using a power trowel.
3. Slightly scarify surface with soft bristled broom while concrete is still plastic.

P. (CONC FIN-6) Float Finish:
1. Follow General Finishing Requirements for initial procedures.

Q. (CONC FIN-9) Mineral Dry-Shake Floor Hardener Finish:
1. Apply at a rate of 1 to 1½ pounds per square foot, unless greater amount is recommended by manufacturer.
2. Concrete containing calcium chloride or more than 0.05% chloride ions by weight of cementitious materials are not permitted for metallic dry-shake hardeners.
3. Air content must be below 3% for all dry-shakes.
4. Verify all procedures noted below are in compliance with manufacturer’s written instructions. Notify Architect of any discrepancies requiring resolution.
5. Follow General Finishing Requirements, steps 1 and 2, for initial procedures.
6. Open the surface to promote movement of bleed water to the top by using a wooden bull float.
7. Wait until the concrete sets up sufficiently to support the weight of a power trowel.
8. Break the surface using a power trowel with float shoes or attached pan.
9. Evenly distribute approximately two-thirds of the specified amount of dry-shake hardener with mechanical spreader.
10. After applied material has darkened slightly to a uniform color from absorbed moisture, restraighten surface if required using 10-foot wide highway straightedge. Apply in two directions at 45 degree angle to strip.
11. Float surface using a power float (float shoe blades or pans) and/or hand wooden floats taking working moisture from the underlying concrete completely through the hardener. Take care not to tear through into the underlying concrete.
12. Apply remaining one-third of dry-shake hardener and continue floating in a like manner.
13. Consolidate concrete surface, uniform in texture and appearance, using power trowel. Hand trowel areas inaccessible by power trowel. Care shall be taken not to trowel-burn the surface.

R. (CONC FIN-10) Broom Finish:
1. Surfaces of concrete mixes with silica fume and/or calcium nitrite must be kept moist (not wet) during finishing operations to promote proper texturing. Pressure foggers with a reach capable of covering the entire surface can aid finishing operations.
2. Follow General Finishing Requirements, steps 1 through 3, for initial procedures.
3. Scarify surface with a transverse scored texture using a medium bristled broom perpendicular to main traffic route. Texture shall be as accepted by the Architect from sample panels.
4. Finish Tolerance: Surface shall not vary by more than ±1/2 inch anywhere from elevation noted on Drawings.
5. Fabricate 2 acceptable test panels simulating finishing techniques and final appearance. Intent of test panels is to simulate both high and low workability mixes, with slumps at time of casting to be 6 inches and 3 inches, respectively. Test panels shall be minimum
of 20 feet by 30 feet and use approved mix designs. Accepted test panels may be incorporated into the finished construction.

6. Finish all concrete slabs to proper elevations to ensure that all surface moisture will drain freely, and that no puddles exist. Contractor must bear cost of any corrections to provide positive drainage and repairing poorly finished surface areas.

S. (CONC FIN-11) Scratch Finish:
1. Follow General Finishing Requirements for initial procedures.
2. While still plastic, scarify slab surface to 1/8-inch amplitude with transverse scored texture by drawing broom, stiff brush, or rake across surface.

T. Coordinate final slab texture requirements with Division 9 flooring installer for proper adhesion of final flooring materials.

U. Summary Slab Finish Schedule:

V. Measure Floor Profile Numbers within 72 hours of final finishing operations and prior to removal of forms on elevated slabs for each slab placement.
   1. Report deficient areas to Architect to determine repair procedures appropriate for final required finish.
   2. Make appropriate adjustments to construction procedures prior to next slab placement when previous slab placement is deficient.

3.5 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defective areas repaired and patched. Remove fins and other projections exceeding ACI 347R limits for class of surface specified.
   1. Apply to formed concrete surfaces unless indicated otherwise.

B. (CONC FIN-20) Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defective areas. Remove fins and other projections exceeding 1/8 inch amplitude.
   1. Apply to concrete surfaces exposed to public view or to be covered with a coating or covering material applied directly to concrete, such as waterproofing, dampproofing, veneer plaster, or painting.
   2. Do not apply rubbed finish to smooth-formed finish.

C. Rubbed Finish: Apply the following to smooth-formed finished concrete:
   1. (CONC FIN-21) Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
   2. (CONC FIN-22) Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix 1 part Portland cement to 1½ parts fine sand with a 1:1 mixture of bonding admixture and water. Add white Portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.
   3. (CONC FIN-23) Cork-Floated Finish: Wet concrete surfaces and apply a stiff grout. Mix 1 part Portland cement and 1 part fine sand with a 1:1 mixture of bonding agent and water. Add white Portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Compress grout into voids by grinding surface. In a swirling motion, finish surface with a cork float.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent

formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces, unless otherwise indicated.

3.6 MISCELLANEOUS CONCRETE ITEMS

A. Provide miscellaneous concrete items as noted and detailed on Drawings.

B. Provide and install reinforcing, anchors and bolts in concrete where directed and required.

C. Provide for installation of inserts, hangers, metal ties and other fastening devices required for attachment of other work.

D. Properly locate fastening devices in cooperation with other trades and secure in position before concrete is placed.

3.7 CONCRETE CURING AND PROTECTION

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Provide curing and protection immediately after placement in accordance with ACI 301 using materials as specified in Section 03 15 00.

B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if the air temperature exceeds 80 degrees F, the wind speed exceeds 10 mph, or the relative humidity is less than 40 percent. Apply according to manufacturer’s written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms are removed during curing period, immediately employ one of curing materials or methods specified for concrete surfaces not covered by forms and continue for remainder of curing period.

D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces, by one or a combination of the following methods. Follow ACI 308 and ASTM 309.

1. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer’s written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

   a. Cure concrete surfaces to receive floor coverings with either a curing compound or moisture-retaining cover that the manufacturer recommends for use with floor coverings. Any deleterious residual material that might affect performance of floor covering shall be cleaned from surface prior to placement of floor covering. Polish Mirrorcrete applied by manufacturer for polish areas, Varar Seal 309 for areas with moisture sensitive floors applied by manufacturer. Curing compound must warrant to meet all floor curing requirements for moisture and PH.

E. Moisture Condition of Slabs – Following placement of concrete and climatization of building, check to see that any specified tests for moisture emission have been made and a written report submitted prior to floor covering or coating installation.
3.8 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas as determined by Architect/Engineer. Remove and replace concrete that cannot be repaired and patched to Architect’s approval and in accordance with ACI 301. Repair methods for defects affecting the concrete’s structural performance shall be closely coordinated between Contractor and Structural Engineer of Record.

B. Patching Material: Submit proposed patching materials for review and approval.

C. Preparation for Concrete Repairs:
   1. Provide shoring/bracing when concrete removal will remove supporting structure or weaken structure.
   2. Locate reinforcing steel in repair area using non-destructive testing. Do not damage or cut any reinforcing steel during the repair process.

D. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, delaminations honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
   1. After form removal, remove honeycombs, rock pockets, and voids more than 1/2 inch in any dimension in solid concrete but not less than 1 inch in depth.
   2. Remove concrete within repair boundary in a manner that will not damage reinforcing steel or adjacent sound concrete materials.
   3. Saw-cut or grind perimeter of areas indicated for removal to a depth of at least 3/4 inch. Do not overcut.
   4. Remove additional concrete if necessary to provide a depth of removal of at least 1/2 inch or as required by patching material manufacturer over entire removal area. Avoid significant and sudden changes in depth of concrete removal.
   5. Where half or more of the perimeter of reinforcing bar is exposed, bond between reinforcing bar and surrounding concrete is broken, or reinforcing bar is corroded, remove concrete from entire perimeter of bar and provide at least a 3/4-inch clearance around bar.
   6. The resulting shape shall be as simple as is practicable with a minimum number of corners and acute angles.
   7. Remove layer of concrete weakened by interconnected microcracks caused by concrete removal with high-pressure water cleaning (5,000 to 10,000 psi) as described in SSPC-SP 12 or abrasive blasting as described in SSPC-SP 13.
   8. Thoroughly clean removal areas of loose concrete, dust, and debris
   9. Dampen repair area and surrounding concrete 6 inches beyond repair area and then remove standing water. Maintain substrate in a saturated surface dry condition.
   10. Apply mortar scrub coat with a brush, scrubbing it into surface and thoroughly coating repair area. If scrub coat dries, recoat before placing patching mortar.
   11. Allow surfaces of lifts that are to remain exposed to become firm and then finish to match and blend with adjacent concrete.
   12. Moist cure for at least 7 days or as recommended by the repair material manufacturer. Use of curing compounds is prohibited.

E. Repair defects on surfaces exposed to view by blending white Portland cement and standard Portland cement so that, when dry, patching material will match surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
F. Repair defects and fill tie holes on concealed formed surfaces that affect concrete's durability and structural performance as determined by Structural Engineer of Record.

G. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.

2. After concrete has cured at least 14 days, correct high areas by grinding.

3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching material. Finish repaired areas to blend into adjacent concrete.

4. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.

5. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove concrete within repair boundary in a manner that will not damage reinforcing steel or adjacent sound concrete materials.

   a. Saw-cut or grind perimeter of areas indicated for removal to a depth of at least 3/4 inch. Do not overcut.
   b. Remove additional concrete if necessary to provide a depth of removal of at least 1/2 inch or as required by patching material manufacturer over entire removal area. Avoid significant and sudden changes in depth of concrete removal.
   c. Where half or more of the perimeter of reinforcing bar is exposed, bond between reinforcing bar and surrounding concrete is broken, or reinforcing bar is corroded, remove concrete from entire perimeter of bar and provide at least a 3/4-inch clearance around bar.
   d. The resulting shape shall be as simple as is practicable with a minimum number of corners and acute angles.
   e. Remove layer of concrete weakened by interconnected microcracks caused by concrete removal with high-pressure water cleaning (5,000 to 10,000 psi) as described in SSPC SP 12 or abrasive blasting as described in SSPC-SP 13.
   f. Thoroughly clean removal areas of loose concrete, dust, and debris.
   g. Dampen repair area and surrounding concrete 6 inches beyond repair area and then remove standing water. Maintain substrate in a saturated surface dry condition.
   h. Apply mortar scrub coat with a brush, scrubbing it into surface and thoroughly coating repair area. If scrub coat dries, recoat before placing patching mortar.
   i. Place patching concrete by troweling toward edges of patch to force intimate contact with edge surfaces. For large patches, fill edges first and then work toward center, always troweling toward edges of patch.
   j. Moist cure for at least 7 days or as recommended by the repair material manufacturer. Use of curing compounds is prohibited.

6. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place
patching material before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

H. Repair materials and installation not specified above may be used, subject to approval by the Architect/Engineer.

3.9 FIELD QUALITY CONTROL

A. Testing and Inspection: Owner will engage qualified special inspectors in accordance with Section 01 45 33.

1. Qualifications: The minimum category of special inspector required to perform services outlined below are noted by qualifications in parentheses. The definitions of the categories of special inspector are included in Section 01 45 33.

2. Certifications: Testing Agency shall have CCRL certification of the National Bureau of Standards.

B. Additional testing and inspecting, at Contractor’s expense, will be performed to determine compliance of corrected work with specified requirements.

C. On a periodic basis, perform concrete mix verification. (Technical I)

1. Verify mixer truck trip ticket conforms to approved mix design.
2. Verify that total water added to mix on site does not exceed that allowed by concrete mix design.
3. Verify that concrete quality is indicative of adequate mixing time, consistency and relevant time limits.

D. Sample and test all cast-in-place concrete. (Technical I)

1. Make, cure and determine strength of concrete test cylinders cast in field. Perform in accordance with ASTM C172 - Practice for Sampling Freshly Mixed Concrete, ASTM C31 - Practice for Making and Curing Concrete Test Specimens in the Field and ASTM C39 - Test Method for Compressive Strength of Cylindrical Concrete Specimens. Evaluation and acceptance of concrete shall be in accordance with ACI 318 with following exceptions:

   a. Make one set of cylinders for each day's operation and each class of concrete placed each day and shall be taken not less than once a day, or not less than once for each 50 cubic yards of concrete, or not less than once for each 2,000 square feet of surface area for slabs or walls. Additional samples for seven-day compressive strength tests shall be taken for each class of concrete at the beginning of the concrete work or whenever the mix or aggregate is changed.

      1) Test sets shall consist of 4 cylinders with fourth cylinder to be field-cured specimen.

      2) For slabs placed when temperatures are expected to fall below 32 degrees F within 72 hours of placement, cast-in-place (pop out) cylinders shall be used.

      3) These cylinders shall be placed close to corners and perimeter of pour.

   b. Store field-cured cylinder as near as possible to location of concrete represented by sample and give cylinder, insofar as practicable, same protection and curing as adjacent concrete.
1) Keep other 3 cylinders covered with plastic or wet burlap and in
60 - 80 degrees F temperature range for 24 hours, allowing no injury to
cylinders.
2) After this period, and prior to age of 48 hours, deliver 3 cylinders to
laboratory for additional curing, taking care not to freeze, crack or damage
specimens.

c. Deliver field-cured cylinder to laboratory at 28 days of age for testing to check
adequacy of curing and protection as described in ACI 318.
d. Test other 3 cylinders, laboratory cured, as follows: One at 7 days of age for
projecting probable 28 day strength and 2 cylinders at 28 days for acceptance of
average strength as described in ACI 318.
e. If additional field cured specimens are required to verify early strength of concrete,
contractor must pay for additional testing.

2. Determine slump of concrete in accordance with ASTM C143 - Test Method for Slump of
Hydraulic Cement Concrete. Perform one test for each set of test cylinders.
3. Determine air content of fresh concrete, when air content is specified, in accordance with
ASTM C173 or ASTM C231. Where placement is by pump, air content shall be measured
at location of placement. Perform one test for each set of test cylinders. Concrete used in
performing air content test shall not be used in fabricating test specimens.
4. Make, transport, and cure specimens as required to determine unit weight of structural
lightweight concrete in accordance with ASTM C567 - Test Method for Unit Weight of
Structural Lightweight Concrete. Perform one test for each day's operation where less
than 50 cubic yards is placed, plus additional set for each 100 cubic yards (or fraction
thereof) over and above first 50 cubic yards.
5. Test concrete temperature hourly when air temperature is 40 degrees F and below and
when 80 degrees F and above, and each time a set of test cylinders is made.
6. Mark each test cylinder with job name, Contractor's name, mix number, date, location of
pour and measured slump. In addition, mark measured air content when air-entraining
admixture is specified.
7. Submit copies of test results to Owner, Architect and Contractor as soon as practicable
after they are made.

E. On a continuous basis, inspect preparation and placement of all concrete, excluding strip
footings without transverse reinforcement. (Technical I)
1. Verify acceptable general condition of concrete base prior to placement.
2. Verify that concrete conveyance and depositing avoids segregation and contamination.
3. Verify that concrete is properly consolidated.
4. Verify reinforcement remains at proper location.
5. Verify underfloor vapor barrier/retarder is properly installed and not damaged during
concrete placement.

F. On a periodic basis, observe protection and curing methods for all concrete, excluding strip
footings without transverse reinforcement. (Technical II)
1. Verify specified curing procedures are followed.
2. Verify that specified hot and cold weather procedures are followed.

G. On a continuous basis, inspect all embedded anchors installed in concrete. (Technical II)
1. Verify specified size, type, spacing, configuration, embedment and quantity.
2. Verify proper concrete placement and consolidation around all embedded anchors.
3.10 EVALUATION OF TEST RESULTS AND FAILURE TO MEET STRENGTH REQUIREMENTS

A. Test results: Evaluate in accordance with ACI 214.

B. Evaluations shall be valid only if samples have been taken and tests have been conducted in accordance with ACI and ASTM specifications and methods as applicable.

C. If strength tests performed on concrete cylinders, cast at time concrete is placed, fail to meet specified 28-day values, or if samples have not been taken and tests conducted as specified, concrete represented by such samples and tests shall be considered questionable and shall be subject to further testing at expense of Contractor.

D. These additional tests of questionable concrete shall be performed by Independent Testing Agency, acceptable to Architect, and shall be conducted in accordance with ASTM C42. Concrete cores may be obtained in field, or load tests conducted and results evaluated in accordance with ACI 318.

E. Test results obtained by use of impact hammer or sonoscope, unless correlated with other data, will not be considered conclusive in evaluating strengths of concrete.

F. If additional testing fails to demonstrate strengths adequate for intended purpose of member or members in question, as determined by Architect, remove questionable concrete and replace with concrete meeting specifications.

END OF SECTION
SECTION 033300 - ARCHITECTURAL CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes cast-in-place architectural concrete including form facings, reinforcement accessories, concrete materials, concrete mixture design, placement procedures, and finishes.

B. Related Requirements:
   1. Section 033000 "Cast-in-Place Concrete" for additional cast-in-place concrete information referenced by this Section.
   2. Section 079200 "Joint Sealants" for elastomeric joint sealants in contraction and other joints in cast-in-place architectural concrete.

1.2 DEFINITIONS

A. Cast-in-Place Architectural Concrete: Formed concrete that is exposed to view on surfaces of completed structure or building and that requires special concrete materials, formwork, placement, or finishes to obtain specified architectural appearance.

B. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume; subject to compliance with requirements.

D. Reveal: Projection of coarse aggregate from matrix or mortar after completion of exposure operations.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place architectural concrete to attend, including the following:
      a. Contractor's superintendent.
      b. Independent testing agency responsible for concrete design mixtures.
      c. Ready-mix concrete manufacturer.
1.4 SUSTAINABLE DESIGN REQUIREMENTS

A. The Owner requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 Sustainable Design Requirements, are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.

B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1. Indicate amounts of mixing water to be withheld for later addition at Project site.

D. Formwork Shop Drawings: Show formwork construction including form-facing joints, rustications, construction and contraction joints, form joint-sealant details, form tie locations and patterns, inserts and embedments, cutouts, cleanout panels, and other items that visually affect cast-in-place architectural concrete.

E. Placement Schedule: Submit concrete placement schedule before start of placement operations. Include locations of all joints including construction joints.

F. Samples: For each of the following materials:

1. Form-facing panel.
2. Form ties.
3. Form liners.
5. Chamfers and rustications.

G. Samples for Verification: Architectural concrete Samples, cast vertically, approximately 18 by 18 by 2 inches (450 by 450 by 50 mm), of finishes, colors, and textures to match design reference sample. Include Sample sets showing the full range of variations expected in these characteristics.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For [manufacturer] [testing agency].
B. Material Certificates: For each of the following:
1. Cementitious materials.
2. Admixtures.
3. Form materials and form-release agents.
4. Repair materials.

C. Material Test Reports: For the following, by a qualified testing agency:
1. Aggregates.

1.7 QUALITY ASSURANCE

A. Field Sample Panels: After approval of verification sample and before casting architectural concrete, produce field sample panels to demonstrate the approved range of selections made under Sample submittals. Produce a minimum of three sets of full-scale panels, cast vertically, approximately 48 by 48 by 6 inches minimum, to demonstrate the expected range of finish, color, and texture variations.
1. Locate panels as indicated or, if not indicated, as directed by Architect.
2. Demonstrate methods of curing, aggregate exposure, sealers, and coatings, as applicable.
3. In presence of Architect, damage part of an exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of tie holes and surface blemishes to match adjacent undamaged surfaces.
4. Maintain field sample panels during construction in an undisturbed condition as a standard for judging the completed Work.
5. Demolish and remove field sample panels when directed.

B. Mockups: Before casting architectural concrete, build mockups to verify selections made under Sample submittals and to demonstrate typical joints, surface finish, texture, tolerances, and standard of workmanship. Build mockups to comply with the following requirements, using materials indicated for the completed Work:
1. Build mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
2. Build mockups of typical exterior wall of cast-in-place architectural concrete as shown on Drawings.
3. Demonstrate curing, cleaning, and protecting of cast-in-place architectural concrete, finishes, and contraction joints, as applicable.
4. In presence of Architect, damage part of the exposed-face surface for each finish, color, and texture, and demonstrate materials and techniques proposed for repair of tie holes and surface blemishes to match adjacent undamaged surfaces.
5. Obtain Architect's approval of mockups before casting architectural concrete.
6. Demolish and remove mockup when directed.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

A. General: Comply with Division 03 Section "Cast-in-Place Concrete" for formwork and other form-facing material requirements.

B. Form-Facing Panels: To be selected by Architect.
1. Form-Facing Panels for As-Cast Finishes: Steel, glass-fiber-reinforced plastic, or other approved nonabsorptive panel materials that will provide continuous, true, and smooth architectural concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

2. Form-Facing Panels for As-Cast Finishes: Exterior-grade plywood panels, nonabsorptive, that will provide continuous, true, and smooth architectural concrete surfaces, medium-density overlay, Class 1, or better, mill-applied release agent and edge sealed, complying with DOC PS 1.

C. Chamfer Strips: Metal, rigid plastic, elastomeric rubber, or dressed wood, 1/2 by 1/2 inch, maximum; nonstaining; in longest practicable lengths.

D. Form Joint Tape: Compressible foam tape; pressure sensitive; AAMA 800, "Specification 810.1, Expanded Cellular Glazing Tape"; minimum 1/4 inch thick.

E. Form Joint Sealant: Elastomeric sealant complying with ASTM C 920, Type M or Type S, Grade NS, that adheres to form joint substrates.

F. Sealer: Penetrating, clear, polyurethane wood form sealer formulated to reduce absorption of bleed water and prevent migration of set-retarding chemicals from wood.

G. Form-Release Agent: Commercially formulated, colorless form-release agent that will not bond with, stain, or adversely affect architectural concrete surfaces and will not impair subsequent treatments of those surfaces.

H. Surface Retarder: Chemical liquid set retarder, for application on form-facing materials, capable of temporarily delaying final hardening of newly placed concrete surface to depth of reveal specified.

I. Form Ties: Factory-fabricated, glass-fiber-reinforced plastic ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

   1. Furnish glass-fiber-reinforced plastic ties, not less than 1/2 inch in diameter, of color selected by Architect from manufacturer's full range.

2.2 STEEL REINFORCEMENT AND ACCESSORIES

A. General: Comply with Division 03 Section "Cast-in-Place Concrete" for steel reinforcement and other requirements for reinforcement accessories.

B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] [60] <Insert number> percent.

C. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire fabric in place; manufacture according to CRSI's "Manual of Standard Practice."

   1. Where legs of wire bar supports contact forms, use CRSI Class 1, gray, plastic-protected or CRSI Class 2, stainless-steel bar supports.

2.3 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
1. Portland Cement: ASTM C 150, Type I/II, gray or white as required by color selection. Supplement with the following:
   a. Fly Ash: ASTM C 618, Class C or Class F. Maximum 25% of total cementitious material for Class C and 20% of total cementitious material for Class F. Minimum amount of fly ash, when used 15% of total cementitious material.
   b. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or Grade 120. Maximum 50 percent of total cementitious material.
   c. Combined pozzolanic mineral admixture or fly ash, and silica fume: 30% by total cementitious material with fly ash or pozzolans not exceeding 25%.
   d. Combined fly ash or other pozzolans, and ground granulated blast-furnace slag: 50% of total cementitious material.
   e. Use cementitious material that is of same brand and type and from same plant as used in the concrete mix design submittal.

B. Normal-Weight Aggregates: ASTM C 33, [Class 5S] [Class 5M] [Class 1N] <Insert class> coarse aggregate or better, graded. Provide aggregates from single source[ with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials].

   1. Maximum Coarse-Aggregate Size: 1/2 inch.
   2. Gradation: Uniformly graded.

C. Normal-Weight Fine Aggregate: ASTM C 33, manufactured or natural sand, from same source for entire Project.

D. Water: Potable, complying with ASTM C 94/C 94M except free of wash water from mixer washout operations.

2.4 ADMIXTURES

B. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

   1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
   2. Retarding Admixture: ASTM C 494/C 494M, Type B.
   3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
   4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
   5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
   6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

C. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable,[ free of carbon black,] nonfading, and resistant to lime and other alkalis.

   1. Color: As selected by Architect from manufacturer's full range.

2.5 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming; manufactured for application to fresh concrete.
B. Absorptive Cover: AASHTO M 182, Class 3, burlap cloth made from jute or kenaf.

C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

D. Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.
   1. For integrally colored concrete, curing compound shall be pigmented type approved by color pigment manufacturer.

2.6 REPAIR MATERIALS

A. Bonding Agent: ASTM C 1059/C 1059M, Type II, nonredispersible, acrylic emulsion or styrene butadiene.

B. Epoxy Bonding Adhesive: ASTM C 881/C 881M, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements.
   1. Types I and II, non-load bearing or Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

2.7 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of cast-in-place architectural concrete proportioned on basis of laboratory trial mixture or field test data, or both, according to ACI 301.
   1. Use a qualified independent testing agency for preparing and reporting proposed design mixtures based on laboratory trial mixtures.

B. Proportion concrete mixtures in accordance with Section 033000 "Cast-in-Place Concrete."

2.8 CONCRETE MIXING

A. Ready-Mixed Architectural Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M and furnish batch ticket information.
   1. Clean equipment used to mix and deliver cast-in-place architectural concrete to prevent contamination from other concrete.
   2. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 FORMWORK

A. General: Comply with Division 03 Section "Cast-in-Place Concrete" for formwork, embedded items, and shoring and reshoring.

B. Limit deflection of form-facing panels to not exceed ACI 303.1 requirements.
C. In addition to ACI 303.1 limits on form-facing panel deflection, limit cast-in-place architectural concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:
   1. Class A, 1/8 inch (3.2 mm).

D. Fabricate forms to result in cast-in-place architectural concrete that complies with ACI 117, “Specifications for Tolerances for Concrete Construction and Materials.”

E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-in-place surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical. Kerf wood rustications, keyways, reglets, recesses, and the like, for easy removal.
   1. Seal form joints and penetrations at form ties with form joint tape or form joint sealant to prevent cement paste leakage.
   2. Do not use rust-stained steel form-facing material.

F. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

G. Do not chamfer exterior corners and edges of cast-in-place architectural concrete.

H. Coat contact surfaces of wood rustications and chamfer strips with sealer before placing reinforcement, anchoring devices, and embedded items.

I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

L. Coat contact surfaces of forms with form-release agent, according to manufacturer’s written instructions, before placing reinforcement.

M. Coat contact surfaces of forms with surface retarder, according to manufacturer’s written instructions, before placing reinforcement.

N. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and attach securely to prevent deflection and maintain stability of liners during concreting. Prevent form liners from sagging and stretching in hot weather. Seal joints of form liners and form liner accessories to prevent mortar leaks. Coat form liner with form-release agent.

3.2 REINFORCEMENT AND INSERTS

A. General: Comply with Division 03 Section "Cast-in-Place Concrete" for fabricating and installing steel reinforcement. Securely fasten steel reinforcement and wire ties against shifting during concrete placement.

B. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.
3.3 REMOVING AND REUSING FORMS

A. Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F (10 deg C) for 24 hours after placing concrete if concrete is hard enough to not be damaged by form-removal operations and curing and protection operations are maintained.
   1. Schedule form removal to maintain surface appearance that matches approved field sample panels.
   2. Cut off and grind glass-fiber-reinforced plastic form ties flush with surface of concrete.

B. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achieved [28-day design compressive strength] [at least 70 percent of 28-day design compressive strength]. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

C. Clean and repair surfaces of forms to be reused in the Work. Do not use split, frayed, delaminated, or otherwise damaged form-facing material. Apply new form-release agent.

D. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for cast-in-place architectural concrete surfaces.

3.4 JOINTS

A. Construction Joints: Install construction joints true to line with faces perpendicular to surface plane of cast-in-place architectural concrete so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
   1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated.
   2. Form keyed joints as indicated. Embed keys at least 1-1/2 inches (38 mm) into concrete. Align construction joint within rustications attached to form-facing material.
   3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
   4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
   5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
   6. Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

B. Contraction Joints: Form weakened-plane contraction joints true to line with faces perpendicular to surface plane of cast-in-place architectural concrete so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

3.5 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, form-release agent, reinforcement, and embedded items is complete and that required inspections have been performed.

B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.
C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.
   1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Deposit concrete continuously between construction joints. Deposit concrete to avoid segregation.
   1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
   2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 303.1.
   3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches (150 mm) into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. Do not permit vibrators to contact forms.

E. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
   1. When average high and low temperature is expected to fall below 40 deg F (4.4 deg C) for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
   2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
   3. Do not use calcium chloride, salt, or other materials containing antifreeze agents.
   4. Do not use chemical accelerators unless otherwise specified and approved in design mixtures.

F. Hot-Weather Placement: Comply with ACI 301 and as follows:
   1. Maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
   2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.6 FINISHES, GENERAL

A. Architectural Concrete Finish: Match Architect's design reference sample, identified and described as indicated, to satisfaction of Architect.

B. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces.
   1. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

C. Maintain uniformity of special finishes over construction joints unless otherwise indicated.
3.7 AS-CAST FORMED FINISHES

A. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Remove fins and other projections exceeding specified limits on formed-surface irregularities. Repair and patch tie holes and defects.

3.8 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and with ACI 301 for hot-weather protection during curing.

B. Begin curing cast-in-place architectural concrete immediately after removing forms from concrete. Cure according to ACI 308.1, by one or a combination of the following methods that will not mottle, discolor, or stain concrete:

1. Moisture Curing: Keep exposed surfaces of cast-in-place architectural concrete continuously moist for no fewer than seven days with the following materials:
   a. Water.
   b. Continuous water-fog spray.
   c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch (300-mm) lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches (300 mm), and sealed by waterproof tape or adhesive. Cure for no fewer than seven days. Immediately repair any holes or tears during curing period; use cover material and waterproof tape.

3. Curing Compound: Mist concrete surfaces with water. Apply curing compound uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

3.9 FIELD QUALITY CONTROL

A. General: Comply with field quality-control requirements in Division 03 Section "Cast-in-Place Concrete."

3.10 REPAIRS, PROTECTION, AND CLEANING

A. Repair and cure damaged finished surfaces of cast-in-place architectural concrete when approved by Architect. Match repairs to color, texture, and uniformity of surrounding surfaces and to repairs on approved mockups.

1. Remove and replace cast-in-place architectural concrete that cannot be repaired and cured to Architect's approval.

B. Protect corners, edges, and surfaces of cast-in-place architectural concrete from damage; use guards and barricades.

C. Protect cast-in-place architectural concrete from staining, laitance, and contamination during remainder of construction period.
D. Clean cast-in-place architectural concrete surfaces after finish treatment to remove stains, markings, dust, and debris.

E. Wash and rinse surfaces according to concrete finish applicator’s written instructions. Protect other Work from staining or damage due to cleaning operations.
   1. Do not use cleaning materials or processes that could change the appearance of cast-in-place architectural concrete finishes.

END OF SECTION
SECTION 033543 - POLISHED CONCRETE FINISHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes polished concrete finishing.

1. Project Concrete:
   a. Lower Level Slab-on-Grade: Normal Weight Concrete according to Section 033000 "Cast-in-Place Concrete" as modified in this section.
   b. Upper Level Suspended Slabs: Lightweight Concrete according to Section 033000 "Cast-in-Place Concrete" as modified in this section.

2. Concrete for polished concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, initial finishing, and curing is specified in Division 03. Coordinate requirements for materials, mixes with requirements indicated.

B. Related Requirements:

   1. Section 033000 "Cast-in-Place Concrete" for concrete not designated as polished concrete and for use of additives and curing compounds in areas designated to be polished.

1.3 DEFINITIONS

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

   1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with polished concrete to attend, including the following:
      a. Contractor's superintendent.
      b. Independent testing agency responsible for concrete design mixtures.
      c. Ready-mix concrete manufacturer.
      d. Cast-in-place concrete subcontractor.
      e. Polished concrete finishing Subcontractor.

   2. Review curing procedures, construction joints, concrete repair procedures, concrete finishing, and protection of polished concrete.
1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Polishing Schedule: Submit plan showing polished concrete surfaces and schedule of polishing operations for each area of polished concrete before start of polishing operations. Include locations of all joints, including construction joints.

D. Samples for Verification: For each type of exposed color matching Architect's Sample.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Material Certificates: For each of the following, signed by manufacturers:
   1. Liquid floor treatments.

1.7 QUALITY ASSURANCE

A. Installer Qualification: Approved by concrete polishing system manufacturer with a minimum of five similar successful projects within the past three years.

B. Field Sample Panels: After approval of verification sample and before casting concrete, produce field sample panels to demonstrate the approved range of selections made under Sample submittals. Produce a minimum of four sets of full-scale panels, approximately 48 by 48 inches minimum each, to demonstrate the expected range of finish, color, and appearance variations.

   1. Locate panels as indicated or, if not indicated, as directed by Architect.
   2. Maintain field sample panels during construction in an undisturbed condition as a standard for judging the completed Work.
   3. Demolish and remove field sample panels when directed.
   4. Include finish samples in the following polish levels for review and selection by District and Architect. Selected sample will be used as Design Reference Sample:

      a. Level 1: Matte finish, 100 grit
      b. Level 2: Low sheen (Matte), 400 grit
      c. Level 3: High sheen (Semi-gloss), 800 grit

C. Mockup: After selection of final Field Sample Panel and before casting concrete floor, build mockup to verify selections made and to demonstrate typical joints, surface finish, tolerances, and standard of workmanship. Build mockups to comply with the following requirements, using materials indicated for the completed Work:

   1. Build mockup in the location and of the size indicated or, if not indicated, as directed by Architect.
   2. Demonstrate curing, staining, finishing, and protecting of polished concrete.
   3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
1.8 FIELD CONDITIONS

A. Traffic Control: Maintain access for pedestrian traffic as required for other construction activities.

PART 2 - PRODUCTS

2.1 CONCRETE POLISHING SYSTEM, GENERAL

A. Source Limitations: Obtain polishing system materials, including treatments and finishing products, from a single manufacturer.

B. Dynamic Coefficient of Friction: Provide polished concrete installed on walkway surfaces with dynamic coefficient of friction indicated as determined by testing identical products per ANSI A137.1 DCOF AcuTest procedure.
   1. Dynamic Coefficient of Friction: Not less than 0.42.

2.2 BASIS-OF-DESIGN SYSTEM

A. Project system is based on products and performance provided by Floor Seal Technology, Inc.
   1. Stain: None.
   2. Cut: Matte, 400 - 800 grit, to be verified with sample panels and mockup.
   5. Lightweight Aggregate: Pumice
   7. Additives: 30 percent slag to produce selected mix. No fly ash. Aggregates shall be knocked down during concrete finishing to produce sanded cutting surface.
   8. Use plastic trowel blades - do not burnish.
   9. No silicate curing compounds.
   10. Spread curing compounds into joints to reduce curling.
   11. FF/FL: 40/30.

B. Other comparable products include the following but must be part of a sole-sourced system matching the specified requirements for performance and aesthetics.
   1. Americrete
   2. Ardex Americas.
   3. Artcrete
   4. Euclid Chemical Company (The), an RPM company

2.3 LIQUID FLOOR TREATMENTS

A. Penetrating Liquid Floor Treatments for Polished Concrete Finish: Clear, waterborne solution of inorganic silicate or silicate materials and proprietary components; odorless; that penetrates, hardens, and is suitable for polished concrete surfaces.
   1. Products: Subject to compliance with requirements, provide the following or comparable from listed manufacturer or Architect approved equal:
      a. Floor Seal Technologies, Inc.; MirrorCrete

B. Finish Protection for Polished Concrete Finish: Clear, waterborne, reactive micro-impregnating polymer or penetrating solution for increased abrasion and stain resistance.
1. Products: Subject to compliance with requirements, provide the following or comparable from listed manufacturer or Architect approved equal:
   a. Floor Seal Technologies, Inc.; MirrorSealer

2.4 CONCRETE POLISH EQUIPMENT AND TOOLING

A. Equipment and tooling equipment as recommended by concrete polishing system products manufacturer for use as part of the multi-step dry mechanical process and accessories. As instructed by the concrete polishing system manufacturer, acceptable products may include:

   1. Planetary Grinder and Polisher:
      a. Large Platform, typically, 32-inch planetary floor polisher with head pressure of 600 pounds.
      b. Tooling:
         1) Metal Bonded Diamonds - 60-80 grit of medium bonded metal
         2) Transitional Diamonds Ceramic / Flat block resin bonded - 100 Grit
         3) Resin Bonded Diamonds - 100 and higher grit, as needed
   2. Micro-Polisher:
      a. Specific weight and RPM are required to reach temperature of 100 deg F for application of concrete final sealer.
      b. Required Tooling: Diamond Impregnated - 400, 800 grit, as needed
   3. Other equipment and tooling as necessary for small areas and edge work.
   4. Grinding and polishing equipment shall be be connected to a dust collector.

PART 3 - EXECUTION

3.1 EXECUTION, GENERAL

A. Inspect condition of existing concrete to be polished in the presence of Architect, polishing subcontractor, and concrete repair and treatment material manufacturer's representative. Determine whether repairs are required. If required, follow the preparation and application procedures for priming and placing repair and topping material prior to polishing. If repair is not required, skip directly to polishing procedures below.

3.2 PREPARATION

A. Joint and Crack Preparation: Honor joints and moving cracks up through the topping material, including expansion joints, isolation joints and control joints (saw cuts).

B. Fill non-moving cracks with joint and crack repair filler as instructed by topping and polishing material manufacturer.

3.3 POLISHING, GENERAL

A. Polish: Match design reference sample approved in Mockup.

B. Apply polished concrete finish system to cured and prepared slabs to match accepted mockup.
   1. Machine grind floor surfaces to receive polished finishes level and smooth.
2. Apply reactive stain for polished concrete in polishing sequence and according to manufacturer’s written instructions.
3. Provide surface with sand exposure only. Aggregate exposure not acceptable.

3.4 POLISHING PROCEDURES

A. The following is a general guideline for polishing procedures. Verify with system manufacturer's recommendations and written instructions, while relying on polishing experience for best results. However, additional steps may be required based on site conditions, age of installation, and desired finish.

1. Knock down aggregates in wet concrete with pin roller or similar float device and allow concrete to cure taking appropriate steps to ensure final product matching design Reference sample. Broadcast decorate flakes if required.
2. Step #1: Grind floor with 60-80 grit Metal Bonded Diamonds. Vacuum floor after each grinding/polishing step to remove dust.
3. Step #2: Grind with 100 grit Transitional, Ceramic / Flat block Resin Bonded Diamonds. Vacuum floor after each grinding/polishing step to remove dust.
4. Step #3: Grind/Hone with 200 grit Resin Bonded Diamond. Vacuum floor after each grinding/polishing step to remove dust.
5. Apply liquid floor treatment in accordance with manufacturer's application instructions. Allow to dry before beginning the next step.
6. Step #4: Grind/Polish with 400 grit Resin Bonded Diamond. Vacuum floor after each grinding/polishing step to remove dust. Proceed with successively higher grits until desired gloss level is achieved.
7. Apply finish sealer material in accordance with manufacturer's application instructions. Allow to dry before beginning the next step.
8. Step #5: Micro-polish with 400 to 800 grit pad. Do not burnish concrete. Dry, micro fiber mop the floor remove all debris. Floor should be allowed to cool to room temperature prior to second application.
9. Apply second coat of finish protection material in accordance with manufacturer's application instructions. Allow to dry.

3.5 EDGEWORK AND JOINT COMPLETION

A. Where needed, polished edge work shall be done with a hand held or walk behind polishing tool. The edge polishing process shall match the corresponding steps outlined above for the desired gloss level. Edge work steps should always precede the corresponding polisher steps.

B. Upon completion of polishing work, fill moving joints with indicated joint sealant.

3.6 PROTECTION

A. Protect the new polished concrete from spills and contamination by petroleum, oil, hydraulic fluid, acid and acidic detergents, paint and other liquid dripping from trades and equipment working over these substrates. If construction equipment must be used on these substrates, diaper all components that may drip fluids. Protect surface by installing a temporary, breathable protective floor covering.

B. Avoid moisture for a minimum of 72 hours after installation as instructed by system manufacturer.
C.  Do not place any protective plastic sheeting, rubber matting, rugs, or furniture that will trap moisture or prevent proper drying, which can result in a cloudy effect on the floor. Use pulp-based material only.

D.  Limit pedestrian use until 24 hours after installation. Normal pedestrian use may occur after 7 days.

3.7 MAINTENANCE

A.  Demonstrate proper maintenance to District's representative of the newly polished concrete floor.

3.8 FIELD QUALITY CONTROL

A.  Engage special testing agency to perform the following tests.
   1. Static Coefficient of Friction: A reading of not less than 0.5 for level floor surfaces shall be achieved and documented, as determined by a certified NFSI walkway auditor using the NFSI 101-A quality control test.
      a. Readings shall be taken not less than 10-feet on center in field areas and within 1-foot of floor area perimeters. In no case shall a reading be below 2-percent of the acceptable minimum sheen.

B.  Test Reports: Provide field quality control sheen gloss reading and static coefficient of friction test results conducted as specified and recorded on floor plan diagram confirming compliance with specified performance criteria.

END OF SECTION
SECTION 033546 - SEALED CONCRETE FINISHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes sealed concrete finishing.
   1. Concrete for sealed concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, initial finishing, and curing is specified in Section 033000 "Cast-in-Place Concrete."

1.3 PREINSTALLATION MEETINGS
A. Preinstallation Conference: Conduct conference at Project site.
   1. Review curing procedures, concrete finishing, and protection of sealed concrete before and after sealer application.

1.4 ACTION SUBMITTALS
A. Product Data: For each type of product.
B. Sustainable Design Submittals required by Section 01813 applicable to this Section.
C. Sample Panels:
   1. Provide three 24-inch by 48-inch by 2-inch thick sample panels using concrete materials equivalent to concrete utilized for the Project, or from actual delivered batch, coated with sealer as follows:
      a. Panel 1: One coat.
      b. Panel 2: Two coats.
      c. Panel 3: Two coats with slip-resistant micro-media material.
   2. Sample panels will be used for final selection by Architect, with approval by Owner, and will set quality and workmanship for Work to be performed.

1.5 INFORMATIONAL SUBMITTALS
A. Qualification Data: For Installer.
B. Material Certificates: For each of the following, signed by manufacturers:
   1. Liquid floor treatments.
1.6 QUALITY ASSURANCE

A. Mockups: Before applying sealer, build mockups to verify selections made under Sample submittals and to demonstrate typical joints, surface finish, tolerances, and standard of workmanship. Build mockups to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
2. Demonstrate curing, finishing, and protecting of sealed concrete.
3. Mock-ups and field test areas are required in order to validate performance and appearance related characteristics (including but not limited to color, inherent surface variations, wear, anti-dusting, abrasion resistance, chemical resistance, stain resistance, coefficient of friction, etc.) to ensure system performance as specified for the intended use, and to determine approval of the finish flooring system.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

B. Verify compatibility of sealer material with concrete curing admixtures prior to concrete placement to ensure compatibility. Provide curing products and concrete admixtures that are compatible with finish coat in locations indicated to receive finish coat.

1.7 FIELD CONDITIONS

A. Traffic and Stain Control: For cast-in-place concrete slabs scheduled to receive sealer, protect concrete from foot traffic, construction chemicals, spills, and stains prior to, and during sealer application to ensure uniform quality and look of freshly placed concrete.

B. Environmental Limitations: Comply with sealer manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting sealer application.

C. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during sealer application.

D. Close spaces to traffic during sealer application and for 24 hours after application.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Dynamic Coefficient of Friction: Provide sealed concrete installed on walkway surfaces with dynamic coefficient of friction indicated as determined by testing identical products per ANSI A137.1 DCOF AcuTest procedure.

1. Dynamic Coefficient of Friction: Not less than 0.42.

2.2 SEALER MATERIALS

A. Sealer/Finisher, Type C-1: Two-part polyaspartic aliphatic polyurea.
1. **Products:** Subject to compliance with requirements, provide Spartacote Flex Pure Clinical Plus as manufactured by Laticrete International Inc., or Architect approved equal with the following characteristics:
   b. Color and Gloss: Clear, gloss.
   c. Tensile strength: 4500 psi, minimum
   d. Low VOC
   e. Integral Antimicrobial Additive: Silver-ion, or equal.
   f. UV-resistant
   g. USDA acceptable.
   h. Chemical and stain resistant.

2. **Provide manufacturer's slip-resistant micro-media material** if selected for finish coat during Sample panel selection process, or as indicated on the drawings.

**PART 3 - EXECUTION**

3.1 **PREPARATION**

A. Prepare and clean substrates according to sealer manufacturer's written instructions for substrate indicated. Provide clean, dry substrate for sealer application.

B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with sealer or that provide a splotchy end product.

1. Roughen concrete substrates as follows:
   a. Grind concrete to an ICRI CSP-2 profile or the equivalent of 30-60-grit sandpaper using a surface grinder equipped with metal bond diamonds.
   b. Comply with ASTM C 811 requirements unless manufacturer's written instructions are more stringent.

2. Repair damaged and deteriorated concrete according to sealer manufacturer's written instructions.

3. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

   a. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with application of resinous flooring only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. of slab area in 24 hours.
   b. Plastic Sheet Test: ASTM D 4263. Proceed with application only after testing indicates absence of moisture in substrates.
   c. Relative Humidity Test: Use in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
   d. If water moisture tests exceed stated limits, apply vapor retarder for moisture vapor emission control as specified in Section 090561.13.

4. **Alkalinity and Adhesion Testing:** Verify that concrete substrates have pH within acceptable range. Perform tests recommended by manufacturer. Proceed with application only after substrates pass testing.

C. **Sealer Materials:** Mix components and prepare materials according to manufacturer's written instructions.
D. Lightweight Concrete Slabs: Verify compatibility of concrete sealer products with use on lightweight concrete. Prepare slab as instructed by sealer manufacturer.

3.2 APPLICATION

A. Apply components of sealer according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.
   1. Coordinate application of components to provide optimum adhesion of sealer material to substrate, and optimum intercoat adhesion.
   2. Cure sealer components according to manufacturer's written instructions. Prevent contamination during application and curing processes.

B. If required or indicated, add slip-resistant micro-media agents after thoroughly mixing A and B components in accordance with sealer manufacturer's written instructions.

C. Application thickness: 8 mils per coat, or equivalent to 200 square feet per coat per gallon.

D. Topcoats: Apply topcoats in number indicated for flooring system and at spreading rates recommended in writing by manufacturer and to produce wearing surface indicated.

3.3 PROTECTION

A. Protect sealed concrete floor from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by sealer manufacturer.

END OF SECTION
SECTION 036100 - GROUTED DOWELS IN CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes:
   1. Reinforcing bar dowels installed in hardened concrete using adhesive prepackaged in cartridges.
   2. Reinforcing bar dowels and threaded bar anchors installed in hardened concrete using nonshrink grout.

B. Related Sections:
   1. Section 050525 – Post-Installed Concrete Anchors for installation of adhesive anchors for attachment of nonstructural and structural components.

1.3 REFERENCES

A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.

B. ASTM: Standards of the American Society for Testing and Materials (ASTM) apply where designated in this Section.

D. ICC-ES: ICC Evaluation Service:

1.4 SUBMITTALS

A. Submittal procedures and administrative provisions are established by Division 01 Section "Submittals".

B. Product data for proprietary materials, including epoxy adhesives and nonshrink grout. Include manufacturer's detailed instructions for storage and handling, installation, and special inspection.
   1. Include current ICC Evaluation Service Report for adhesives prepackaged in cartridges.
1.5 QUALITY ASSURANCE

A. Cartridge Adhesive: Products proposed for use shall have an active ICC Evaluation Service Report evidencing compliance with ICC ES acceptance criteria AC308 for use to resist tension and shear in cracked and uncracked concrete.

1. Installation shall conform to manufacturer’s written instructions listed in ICC ES report.

PART 2 - PRODUCTS

2.1 ADHESIVE AND GROUT MATERIALS

A. Cartridge Adhesive

1. Epoxy Adhesive: Two-component, 100% solids, structural epoxy conforming to ASTM C881, Type IV; Grade 3; prepackaged in cartridges for manually or pneumatically operated caulk gun and automatically mixed at nozzle. Approved for use in cracked and uncracked concrete in accordance with ICC ES AC308, as demonstrated by an active ICC Evaluation Service Report. Subject to compliance with specified requirements, provide one of the following, or equal:

   HIT-RE 500-V3 Adhesive, Hilti Inc. (ICC ESR-3814)
   Set-XP Epoxy Adhesive, Simpson Strong-Tie Co. (ICC ESR-2508)

2. Hybrid Adhesive: Two-component, hybrid adhesive prepackaged in cartridges for manually or pneumatically operated caulk gun and automatically mixed at nozzle. Approved for use in cracked and uncracked concrete in accordance with ICC ES AC308, as demonstrated by an active ICC or IAPMO Evaluation Service Report. Subject to compliance with specified requirements, provide one of the following, or equal:

   HIT-HY 200 Adhesive, Hilti Inc. (ICC ESR-3187)
   AT-XP Adhesive, Simpson Strong-Tie Co. (UES-ER-0263)

B. Nonshrink Grout: Premixed, nonmetallic, noncorrosive product, complying with ASTM C1107, Class B or C, at fluid consistency. Non-bleeding after mixing at a 27 (plus or minus 3 second) flow, ASTM C939, at 45 to 90 degrees F. Will pass through flow cone 45 minutes after initial mixing without the addition of water. Subject to compliance with requirements, provide one of the following:

   Euco N.S., Euclid Chemical Co.
   Masterflow 928, Master Builders
   Five Star Grout, U.S. Grout Corp.

2.2 DOWELS

A. Reinforcing Bars: ASTM A615, Grade 60, or ASTM A706, deformed. Embedded end shall be free of offsets that interfere with installation.
PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine areas to be drilled to verify conditions of access, interferences, and existing materials.
B. Locate existing reinforcing steel, which might interfere with drilling, with a suitable metal detector or by chipping.

3.2 PREPARATION
A. Protect existing exposed surfaces from grouting operations.
B. Dowels shall be free of oil, mud, loose rust or other materials that may reduce bond.

3.3 INSTALLATION WITH CARTRIDGE ADHESIVE
A. General: Install anchors in accordance with manufacturer’s written instructions, including drilling, hole cleaning, dispensing of epoxy and setting of dowels.
B. Adhesive Type: Approved hybrid adhesives shall be acceptable where designated embedment depth is 12 inches or less. Hybrid adhesives shall not be acceptable for dowels with deeper embedment; use epoxy adhesive.
C. Drilling:
   1. Drilling Equipment: Use electric or pneumatic rotary type drilling hammer with medium or light impact and carbide tipped masonry bit. Where edge distances are less than 2 inches, use lighter impact equipment to prevent microcracking during drilling process.
   2. Do not cut reinforcing steel, except with approval of Owner's Representative. Where reinforcing is encountered, drill new hole a minimum of 2 diameters clear at no additional cost to Owner.
D. At overhead applications, use manufacturers standard hole plug to prevent epoxy leakage and temporarily support dowel to prevent movement out of hole. Hybrid adhesive is preferred for overhead application, where embedment depth permits use.
E. Fill abandoned holes with nonshrink grout.

3.4 INSTALLATION WITH NONSHRINK GROUT
A. Drill holes to a diameter 1-inch minimum larger than the nominal diameter of the dowels.
B. Drill holes using water-cooled core drilling equipment. Roughen surface by method acceptable to Owner's Representative.
C. Clean hole by flushing with water hose inserted to back of hole until water runs clear, brush twice with round steel wire bristle brush of appropriate diameter, and flush with hose until water runs clear.
D. Place reinforcing bar into hole. Provide centralizing devices as required to maintain bar at center of core.

E. Mix and place grout at fluid consistency in accordance with manufacturer's recommendations.

F. Cure by covering with wet cloth for 3 days minimum or by coating with curing compound.

3.5 CLEANING

A. Clean excess epoxy from around holes before it hardens only on surfaces that will not be exposed to view.

B. On surfaces that will be exposed to view, allow epoxy to cure then chip away hardened epoxy. Surfaces shall be repaired to match existing finish to the satisfaction of the Owner's Representative.

3.6 PROTECTION

A. Protect dowels from accidental disturbance during setting time specified by manufacturer.

B. Do not place pull-out or shear loads on dowels during curing time specified by manufacturer.

3.7 FIELD QUALITY CONTROL

A. Inspection and testing will be performed in accordance with procedures and administrative requirements of Division 01 Section, "Quality".

B. Testing Agency will:
   1. Review manufacturer's recommended installation and inspection procedures, as contained in ICC Evaluation Service Report.
   2. Special Inspect installation for conformance with Contract Documents, manufacturer's recommendations, and requirements of the applicable ICC-ES report.
   3. Test dowels in accordance with requirements of CBC Section 1910A.5 for adhesive anchors.
      a. Testing Procedure: Use hydraulic ram testing procedure of CBC Section 1910A.5.5 for testing of bond (confined configuration).
      b. Test Loads: As shown on Drawings, or as otherwise designated by Owner's Representative, in conformance with test load requirements CBC Section 1910A.5.4.
      c. Testing Frequency: 100 percent, except frequency can be reduced in accordance with CBC Section 1910A.5.3.
      d. Acceptance Criteria: Maintain test load for a minimum of 15 seconds with no discernible movement of dowel out of hole.

END OF SECTION
SECTION 040413 - COMMON SUBMITTAL REQUIREMENTS FOR MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. This Section includes the following:
      1. Supplementary administrative and procedural requirements for submitting Shop
         Drawings, Product Data, Samples, and other submittals specific to the work of this
         Division.
   B. Related Requirements:
      1. Division 01 submittal requirements.

1.3 DEFINITIONS
   A. Contractor:  Refers to an entity in direct Contract with the Owner to furnish and/or perform any
      portion of the Work of the Contract.
      1. Contractor shall review and approve Product Submittals prior to forwarding them to the
         Architect.
   B. Product Submittals:  In general, Product Submittals show characteristics of the proposed
      construction in one of the following forms:
      1. Shop Drawings.
      2. Product Data.
      3. Samples.
   C. Action Submittals:  Written and graphic information and physical samples that require
      Architect/Engineer's responsive action.  Action submittals are those submittals indicated in
      individual Specification Sections as "action submittals."
   D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design
      Requirements."  Submit documentation for products and materials contributing to achievement
      of LEED rating indicated.  Sustainable Design Submittals are in addition to other submittal
      requirements.
   E. Informational Submittals:  Written and graphic information and physical samples that do not
      require Architect/Engineer's responsive action.  Submittals may be rejected for not complying
      with requirements.  Informational submittals are those submittals indicated in individual
      Specification Sections as "informational submittals."
   F. Submittal Review Sheet:  Specific form required to accompany each submittal.  Obtain
      Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
   a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Refer to Section 01330 for quantity of days allowed for review.
2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER'S AND GENERAL CONTRACTOR'S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect's staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:
   1. Action Codes Permitting Use:
      a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
      b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
      c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect's notations and Contract Document requirements.
d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.

2. Action Code Prohibiting Use:
   a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
   a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. Informational Submittals: For Architect's information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

1. Action Code for Information Only:
   a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.
   1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.
   1. Submittal Numbering: See below.
   2. Contact Information: Full Name, Phone Number and Email Address.

B. Submittal Definition
   1. Each submittal consists of items from only ONE Specifications section.
2. Complete Submittal: If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.

3. Partial Submittals: If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).

4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.

C. Submittal Numbering

1. Number submittals as described below to assist tracking.

2. Number each submittal in the format nnnnnn-nn.
   a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.
   b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.
   c. P-Number for Partial Submittals: Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.
   d. R-Number for Re-submittals: Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.
   e. Examples:

3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS

A. Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.

B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:
   1. Submittal Number: See Submittal Numbering in Submittal Transmittal Requirements paragraph.

D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION
SECTION 042113 - BRICK MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Clay face brick.
   2. Thin brick.
   3. Mortar and adhesive.
   4. Ties and anchors.
   5. Embedded flashing.
   6. Miscellaneous masonry accessories.
   7. Water repellent and graffiti control.

B. Products Installed but not Furnished under This Section:
   1. Steel lintels in masonry veneer.
   2. Steel shelf angles for supporting masonry veneer.
   3. Joint sealant at deflection/story drift joints and control joints.

C. Related Requirements:
   1. Section 051200 "Structural Steel Framing" for installing anchor sections of adjustable masonry anchors for connecting to structural steel frame.
   2. Section 061600 "Sheathing" for glass-mat gypsum sheathing substrate with continuous water-resistive barrier.
   3. Section 061600 "Sheathing" for cement board wall sheathing substrate for adhered thin brick applications.
   4. Section 072100 "Thermal Insulation" for composite thermal spacer support system used as part of thin brick application assembly.
   5. Section 072726 "Membrane Air Barriers" for fluid-applied water-resistive air barrier used as part of brick veneer assemblies.
   6. Section 076200 "Sheet Metal Flashing and Trim" for sheet metal flashing and for furnishing manufactured reglets installed in masonry joints.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For the following:
   1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
   2. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.
D. Samples for Verification: For each type and color of the following, based on Architect's previously selected products:

1. Clay face brick, in the form of straps of five or more bricks; one with each type of sealer and one unsealed.
2. Thin brick, in the form of straps of five or more bricks; one with each type of sealer and one unsealed.
3. Pigmented mortar. Make Samples using same sand and mortar ingredients to be used on Project, if any.
5. Accessories embedded in masonry.
6. Masonry sealer and graffiti control applied to one-half of brick sample straps.

E. Test Reports:

1. Anchors, ties, and metal accessories, including ES reports as applicable.

1.4 QUALITY ASSURANCE

A. Provide the following upon request:

1. Material Certificates: For each type and size of the following:
   a. Masonry units.
      1) Include material test reports substantiating compliance with requirements.
      2) For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
      3) For exposed brick, include test report for efflorescence according to ASTM C 67.
      4) For masonry sealers and graffiti control products.
   b. Cementitious materials. Include name of manufacturer, brand name, and type.
   c. Mortar admixtures.
   d. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.

B. Mockups: Build mockups using approved Samples, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockup according to Mockup Drawing as shown on Drawings.
2. Include each type of exposed brick masonry construction in in exterior envelope mockup in accordance with Section 01450 "Mockup Requirements," including accessories.
   a. Include a sealant-filled joint at least 16 inches long in each mockup.
   b. Include through-wall flashing installed for a 24-inch length in corner of exterior wall mockup approximately 16 inches down from top of mockup, with a 12-inch length of flashing left exposed to view (omit masonry above half of flashing).
   c. Include metal studs, sheathing, water-resistant barrier, veneer anchors, flashing, cavity drainage material, and weep holes in exterior masonry-veneer wall mockup.
   d. Include portion of metal wall panels built into brick masonry to demonstrate interface transition and compatibility. Include flashing and sealant.
3. Water Repellant and Graffiti Control: Test a minimum 48- by 48-inch area on each type of masonry. Use the manufacturer's application instructions. Let test area protective treatment cure before inspection. Keep test panels available for comparison throughout the protective treatment project.
   a. Demonstrate graffiti removal to Owner and Architect.
4. Clean exposed faces of mockups with masonry cleaner as indicated.
5. Protect accepted mockups from the elements with weather-resistant membrane.

   a. Approval of mockup also includes color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; and aesthetic qualities of workmanship.
   b. Approval of mockups is also for other material and construction qualities specifically approved by Architect in writing.
   c. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

   1. Product: Subject to compliance with requirements, match Architect’s Sample as follows, or Architect approved equal:
      
      a. Size: Norman
      b. Pattern: Refer to Drawings for pattern and protrusions.

         1) Pattern 1:
            i. Manufacturer: Belden Brick
            ii. Color: Alaska White Velour

         2) Pattern 2:
            i. Manufacturer: Belden Brick
            ii. Color: Contra Costa Blend

B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate. All brick supplied must be pre-blended by the manufacturer.

2.2 UNIT MASONRY, GENERAL

A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6, except as modified by requirements in the Contract Documents.

B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects will be exposed in the completed Work and will be within 20 feet vertically and horizontally of a walking surface.

C. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.

2.3 BRICK

A. Regional Materials: Brick shall be manufactured within 500 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.
B. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:

1. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
2. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.
3. Provide special shapes for applications requiring brick of size, form, color, and texture on exposed surfaces that cannot be produced by sawing.
4. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.
5. All special shapes are to be manufactured per Architectural details, no cuts for special shapes are to be made on site.

C. Clay Face Brick: Facing brick complying with ASTM C 216.

1. Grade: MW above-grade and SW below-grade.
2. Type: FBX.
3. Additional Requirements:
   a. Under no circumstances may the saturation coefficient requirements of ASTM C216, Table 1 Physical Requirements be waived.
   b. The minimum compressive strength of an individual brick shall be 34.5 MPa (5000 psi).
   c. Brick shall pass the freezing and thawing test as described in ASTM C67.
   d. Brick shall pass the efflorescence test as "not effloresced" as described in ASTM C67.

D. Thin Brick: Veneer brick complying with ASTM C1088.

1. Grade: Exterior
2. Type: TBX.
3. Thickness: 1/2-inch
4. Additional Requirements:
   a. Under no circumstances may the saturation coefficient requirements of ASTM C216, Table 1 Physical Requirements be waived.
   b. The minimum compressive strength of an individual brick shall be 34.5 MPa (5000 psi).
   c. Brick shall pass the freezing and thawing test as described in ASTM C67.
   d. Brick shall pass the efflorescence test as "not effloresced" as described in ASTM C67.

2.4 MORTAR MATERIALS

A. Portland Cement: ASTM C 150/C 150M, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.

1. Alkali content shall not be more than 0.1 percent when tested according to ASTM C 114.

B. Hydrated Lime: ASTM C 207, Type S.

C. Aggregate for Mortar: ASTM C 144.

1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
2. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.

E. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
   1. Manufacturer: Spec Mix Inc., or Architect approved equal.

F. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494/C 494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. GCP Applied Technologies Inc. (formerly Grace Construction Products).

G. Water: Potable.

2.5 PREBLENDED MORTAR MATERIALS

A. Mortar Adhesive for Thin-set Adhered Masonry Applications: ANSI A118.4; lightweight, non-sag, polymer modified thin-set mortar.
   1. Product: Subject to compliance with requirements, provide the following, or Architect approved equal:
      a. Laticrete International, Inc.; MVIS Masonry Veneer Mortar

B. Moisture Barrier for Thin-set Adhered Masonry Applications: ANSI A118.10 and ANSI A118.12; Fluid-applied, nailable, single component, load bearing, waterproofing, crack isolation, and air barrier membrane used as primer for masonry veneer thinset mortar over cement board.
   1. Product: Subject to compliance with requirements, provide the following, or Architect approved equal:
      a. Laticrete International, Inc.; MVIS Air & Water Barrier

C. Water: Potable.

2.6 TIES AND ANCHORS

A. General: Ties and anchors shall be coated to provide thermal break to decrease thermal transfer through rigid insulation, and shall extend at least 1-1/2 inches into veneer but with at least a 5/8-inch cover on outside face.
   1. Acceptable Manufacturers: Subject to compliance with requirements, provide listed product or equal by one of the following:
      a. Heckmann Building Products, Inc.
      b. Wire-Bond.
   2. Changes to the specified tie/anchor is subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

B. For locations where typical anchor cannot be used, provide the following:
1. Fabricate sheet metal anchor sections and other sheet metal parts from 0.109-inch-thick, stainless-steel sheet.
   a. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 316.

C. Stainless-Steel Wire: ASTM A 580/A 580M, Type 316.
   1. Diameter: 3/16-inch

D. Adjustable Masonry-Veneer Anchors and Ties, typical, unless otherwise indicated:
   1. General: Provide anchors that allow vertical adjustment but resist a 200-lbf load in both tension and compression perpendicular to plane of wall without deforming or developing play in excess of 1/16 inch.
      a. Polymer-Coated, Steel Drill Screws for Steel Studs: ASTM C 954 except manufactured with hex washer head. Screw diameter by length required to penetrate steel stud flange with not less than three exposed threads through insulation and exterior sheathing, and with organic polymer coating with salt-spray resistance to red rust of not less than 1000 hours according to ASTM B 117.
      b. Stainless-Steel Barrels: ASTM A 580/A 580M, Type 316.
      c. Washer: 1-1/2-inch diameter, Stainless-Steel, Type 316
      d. Adjustment: Up to 1/2-inch.
   2. Adjustable Veneer-Anchor: Single screw veneer anchor for metal stud construction with a polymer-coated dual-diameter barrel screw, factory-installed washers to seal both the face of the insulation and the air/vapor barrier, and adjustable steel-reinforced plastic-coated wings to accept compressed leg seismic hook.
      a. Basis-of-Design Product: Subject to compliance with requirements, provide the following, or Architect approved equal:
         1) Hohmann & Barnard, Inc.; Thermal 2-Seal Wing Nut Anchor.
   3. Compressed Leg Seismic Hook/Pintle: Engage with wing nut anchor and continuous wire.
      a. Basis-of-Design Product: Subject to compliance with requirements, provide the following, or Architect approved equal:
         1) Hohmann & Barnard, Inc.; SH-2X-Seismic Hook.
      b. Length: As required, verify.
      c. Thickness: 3/16-inch
      d. Stainless-Steel: ASTM A 580/A 580M, Type 316.

2.7 EMBEDDED FLASHING MATERIALS

A. Masonry flashing shall be metal, except as otherwise noted. Metal flashing shall be through-wall, where feasible, except where otherwise clearly shown or noted. Through-wall flashing shall be 2-piece, except where otherwise clearly shown or noted.

B. Metal Flashing: Provide metal flashing complying with SMACNA's "Architectural Sheet Metal Manual" and as follows to suit condition and masonry color:
   1. Stainless Steel: ASTM A 240, Type 316, 0.016 inch thick.
   2. Fabricate continuous flashings in sections 96 inches long minimum, but not exceeding 12 feet. Provide splice plates at joints of formed, smooth metal flashing.
   3. Fabricate through-wall flashing with snap-lock receiver on exterior face where indicated to receive counter Flashing.
4. Fabricate through-wall flashing with drip edge where indicated. Fabricate by extending flashing 1/2 inch out from wall, with outer edge bent down 30 degrees and hemmed.

5. Metal Drip Edge: Fabricate from stainless steel. Extend at least 3 inches into wall and 1/2 inch out from wall, with outer edge bent down 30 degrees and hemmed.

C. Flexible Flashing: Use one of the following unless otherwise indicated:

1. Non-asphaltic, Stainless-Steel-Laminated Flashing: 7-oz./sq. ft., No. 316 stainless-steel sheet bonded on one side to glass-fiber cloth or polymeric fabric.
   a. Products: Subject to compliance with requirements, provide one of the following:
      1) Hohmann & Barnard, Inc.; Mighty-Flash Stainless Steel Fabric Flashing.
      2) York Manufacturing, Inc.; Multi-Flash SS.

   a. Products: Subject to compliance with requirements, provide one of the following:
      2) York Manufacturing, Inc.; York 316

D. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.

E. Application: Unless otherwise indicated, use the following:

1. Where flashing is indicated to receive counterflashing, use metal flashing.
2. Where flashing is indicated to be turned down at or beyond the wall face, use metal flashing.
3. Where flashing is partly exposed and is indicated to terminate at the wall face, use metal flashing with a built-in metal drip edge, or flexible flashing with manufactured metal drip edge.
4. Where flashing is fully concealed, use metal flashing or flexible flashing.

F. Solder and Sealants for Sheet Metal Flashings: As specified in Division 07 Section "Sheet Metal Flashing and Trim."

1. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with phosphoric acid flux of type recommended by stainless-steel sheet manufacturer.
2. Elastomeric Sealant: ASTM C 920, chemically curing silicone sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

G. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

H. Termination Bars for Flexible Flashing: Stainless steel bars 1/8 inch by 1 inch.

2.8 MISCELLANEOUS MASONRY ACCESSORIES

A. Cement Backer Board: Refer to Section 061600 "Sheathing."
B. Rigid Insulation: Semi-rigid mineral wool board complying with Section 072100 "Thermal Insulation" as part of NFPA 285 compliant assembly.

C. Thermal Spacer Composite Support System: Refer to Section 072100 "Thermal Insulation."

D. Weather-Resistive-Barrier (WRB): Fluid-applied air barrier complying with Section 072726 "Membrane Air Barriers" as part of NFPA 285 compliant assembly.

E. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from urethane or PVC.

F. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 or PVC, complying with ASTM D 2287, Type PVC-65406 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

G. Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt).

   1. Paper Backing: FS UU-B-790a, Type I, Grade D, Style 2 vapor-permeable paper.

I. Lath Attachment Devices: Material and type required by ASTM C1063 for installations indicated.

J. Weep/Vent Products: Use one of the following unless otherwise indicated:
   1. Mesh Weep/Vent: Free-draining mesh; made from polyethylene strands, full height and width of head joint and depth 1/8 inch less than depth of outer wythe; in color selected from manufacturer's standard.
      a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
         1) Advance Building Products Inc.; Mortar Break Weep Mesh.
         2) Archovations, Inc.; CavClear Weep Vents.
         3) Mortar net USA, Ltd.; Mortar Net Weep Vents.
   2. Vinyl Weep/Vent: Units made from flexible PVC, designed to fit into a head joint and consisting of a louvered vertical leg, flexible wings to seal against ends of masonry units, and a top flap to keep mortar out of the head joint; in color selected by Architect.
      a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
         1) Hohmann & Barnard, Inc.; #343 Weep Hole.
         2) Williams Products, Inc.; Williams-Goodco Brick Vent.
         3) Wire-Bond; Louvered Weep Holes.

K. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.
   1. Products: Subject to compliance with requirements, provide the following:
      a. Mortar Net USA, Ltd.; Mortar Net.
   2. Provide one of the following configurations:
2.9 MASONRY SEALER AND GRAFFITI CONTROL

A. Masonry Sealer and Graffiti Control: Manufacturer's clear, penetrating, solvent-based silicone elastomer formulated to weatherproof brick materials and protect treated surfaces from repeated graffiti attacks without altering the natural appearance.

1. Product: Subject to compliance with requirements, provide the following, or Architect approved equal:
   a. PROSOCO, Inc.; Sure Klean Weather Seal Blok-Guard & Graffiti Control

2.10 MASONRY CLEANERS

A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   b. PROSOCO, Inc.

2.11 MORTAR MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.

1. Do not use calcium chloride in mortar.
2. Use portland cement-lime mix, or preblended mix, unless otherwise indicated.
3. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Mortar for Unit Masonry: Comply with ASTM C 270, Proportion Specification. Provide the following types of Portland-cement-sand mortar:

1. Type N.

C. Preblended, Portland Cement-Lime Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

D. Preblended, Dry Mortar Thinset Adhesive and Moisture Control Mixes: Mix according to manufacturer's instructions at the Project site.

E. Preblended Pointing Mortar Mix: Mix according to manufacturer's instructions at the Project site.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
   1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation. All surfaces including, but not limited to metal panel and back face of thin brick must be free of water, snow, dirt, mud, oil and other foreign materials prior to application.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Trim or flash in place per manufacturer's details and BIA Technical Note 28C on Thin Brick Veneer.

D. Protect the tops of all uncompleted walls to prevent water entry.

3.3 LINTELS

A. Install steel lintels where indicated.

B. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.

3.4 FLASHING, WEEP HOLES, AND VENTS

A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated. Install vents at shelf angles, ledges, and other obstructions to upward flow of air in cavities, and where indicated.

B. Install flashing as follows unless otherwise indicated:
   1. Extend flashing through veneer, across airspace behind veneer, and up face of sheathing at least 8 inches. Fasten upper edge of flexible flashing through sheathing to metal stud backup with termination bar; seal top edge of termination bar. Lap water-resistant barrier at least 4 inches over top edge of flashings.
   2. At lintels and shelf angles, extend flashing a minimum of 6 inches into masonry at each end. At heads and sills, extend flashing 6 inches at ends and turn up not less than 2 inches to form end dams.
   3. Seal laps in flashing with elastomeric sealant complying with requirements in Section 079200 "Joint Sealants" for application indicated.
4. Where shown or required, install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch back from outside face of wall, and adhere flexible flashing to top of metal drip edge.

5. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch back from outside face of wall, and adhere flexible flashing to top of metal flashing termination.

6. Cut flexible flashing off flush with face of wall after masonry wall construction is completed.

C. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.

D. Lap flashing ends a minimum of 3 inches.

E. Seal vertical and horizontal legs of all flashing laps with compatible lap sealant.

F. Lap water-resistive barrier over top of flashing.

G. Mechanically attach flashing, and tape and seal top edge of flashing according to manufacturer's instructions to surface of water-resistive barrier over backing in such a manner as to prevent moisture from entering the wall or to redirect water to the exterior.

H. Turn up the ends of discontinuous (e.g., head, sill and stepped) flashings to form end dams or extend not less than 4 inches beyond edges of openings.

I. Extend flashing through wall with at least 1/4 inch exposed to form a drip.

J. Install weep holes in veneers in head joints of first course of masonry immediately above embedded flashing.

1. Use specified weep/vent products to form weep holes.
2. Use wicking material to form weep holes above flashing under brick sills. Turn wicking down at lip of sill to be as inconspicuous as possible.
3. Space weep holes 24 inches o.c. unless otherwise indicated.
4. Space weep holes formed from wicking material 16 inches o.c.
5. Cover cavity side of weep holes with plastic insect screening at cavities insulated with loose-fill insulation.
6. Trim wicking material flush with outside face of wall after mortar has set.

K. Place cavity drainage material in airspace behind veneers to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.

3.5 INSTALLATION, GENERAL

A. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.

B. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

C. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.
D. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested according to ASTM C 67. Allow units to absorb water so they are damp but not wet at time of laying.

3.6 EXPANSION JOINTS

A. General: Install expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span expansion joints without provision to allow for in-plane wall or partition movement.

B. Form expansion joints as follows:
   1. Build flanges of metal expansion strips into masonry. Lap each joint 4 inches in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.
   2. Build flanges of factory-fabricated, expansion-joint units into masonry.
   3. Build in compressible joint fillers where indicated.
   4. Form open joint full depth of brick wythe and of width indicated, but not less than 1/2 inch for installation of sealant and backer rod specified in Section 079200 "Joint Sealants."

C. Install metal expansion strips in sealant joints at locations indicated. Build flanges of expansion strips into masonry by embedding in mortar between stone masonry and backup wythe. Lap each joint 4 inches in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.

D. Provide horizontal, pressure-relieving joints by either leaving an airspace or inserting a compressible filler of width required for installing sealant and backer rod specified in Section 079200 - Joint Sealants, but not less than 3/8 inch.

E. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.

3.7 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in bond pattern indicated on Drawings; do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.

C. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

D. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

E. Perform necessary field cutting and trimming as masonry is set.

F. Arrange masonry with color and size variations uniformly dispersed for an evenly blended appearance.
G. Set masonry to comply with requirements indicated on Drawings. Install supports, fasteners, and other attachments indicated or necessary to secure masonry in place. Set masonry accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.

H. Maintain uniform joint widths. Lay walls with joints not less than 3/8 inch at narrowest points or more than 1/2 inch at widest points.

I. Provide sealant joints of widths and at locations indicated.
   1. Keep sealant joints free of mortar and other rigid materials.
   2. Sealing joints are specified in Section 079200 "Joint Sealants."

3.8 MORTAR BEDDING AND JOINTING

A. General: Use either Portland cement-lime-sand mortar or prepackaged Portland cement-lime mortar mix.

B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

3.9 TOLERANCES

A. Dimensions and Locations of Elements:
   1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch or minus 1/4 inch.
   2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch.
   3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:
   1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
   2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
   3. For vertical lines and surfaces, do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
   4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
   5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
   6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
   7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.
C. Joints:
   1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
   2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.
   3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
   4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.
   5. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.10 ANCHORED MASONRY VENEERS
A. Anchor masonry veneers to wall framing with seismic masonry-veneer anchors to comply with the following requirements:
   1. Fasten screw-attached and seismic anchors through insulation and sheathing to wall framing to metal stud backup with metal fasteners of type indicated. Install in accordance with manufacturer.
   2. Embed tie sections in masonry joints.
   3. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
   4. Space anchors as indicated, but not more than 15 inches o.c. vertically and 16 inches o.c. horizontally, with not less than one anchor for each 2 sq. ft. of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 8 inches, around perimeter.
B. Provide not less than 1 inch of airspace between back of masonry veneer and face of insulation.
   1. Keep airspace clean of mortar droppings and other materials during construction. Bevel beds away from airspace, to minimize mortar protrusions into airspace. Do not attempt to trowel or remove mortar fins protruding into airspace.

3.11 ADHERED THIN BRICK VENEER
A. General: Use either dry Portland cement-lime mortar mix or prepackaged thinset mortar adhesive over cement backer board.
B. Cement Board: Install cement backer boards over thermal spacers and continuous insulation in accordance with Section 061600 "Sheathing" and Section 072100 "Thermal Insulation."
C. Portland Cement-Lime Mortar:
   1. Install paper-backed metal lath over water-resistive barrier on cement backer board to comply with ASTM C1063.
   2. Install scratch coat over metal lath 3/8 inch (10 mm) thick to comply with ASTM C926.
   3. Coat backs of brick units and face of scratch coat with cement-paste bond coat, then butter both surfaces with setting mortar. Use sufficient setting mortar, so a slight excess will be forced out the edges of stone units as they are set. Tap units into place, completely filling space between units and scratch coat.
D. Install mortar adhesive in accordance with manufacturer's instructions.
2. Horizontal, Soffits: Install thin brick with thin-brick mortar adhesive over cement backer board.
3. Key thin-set adhesive mortar materials thoroughly into substrate. Comb on additional mortar with the notched side of a 1/4-inch by 3/8-inch notched trowel.

E. Coat backs of thin brick units with thin-set adhesive mortar coat. Use sufficient mortar, so a slight excess will be forced out the edges of brick units as they are set. Tap units into place, completely filling space between units and backup.

F. Discard mortar after two hours or when too stiff to work. Retempering within two hours is permitted, but may contribute to mortar color variation.

G. Do not fill movement joints to receive sealant.

3.12 POINTING
A. Prepare brick-joint surfaces for pointing with mortar by removing dust and mortar particles. Where setting mortar was removed to depths greater than surrounding areas, apply pointing mortar in layers not more than 3/8 inch deep until a uniform depth is formed.

B. Point brick joints by placing and compacting pointing mortar in layers of not more than 3/8 inch deep. Compact each layer thoroughly, and allow it to become thumbprint hard before applying next layer.

C. Tool joints, when pointing mortar is thumbprint hard, with a smooth jointing tool to produce the following joint profile:
   1. Joint Profile: Match campus standard, unless otherwise indicated.

3.13 FIELD QUALITY CONTROL
A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. Inspections: Special inspections according to Level B in TMS 402/ACI 530/ASCE 5.
   1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.

C. Testing Prior to Construction: One set of tests.

D. Clay Masonry Unit Test: For each type of unit provided, according to ASTM C 67 for compressive strength.

E. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.

F. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for mortar air content and compressive strength.
G. Water-Spray Test: Test area of assembly [shown on Drawings] [as directed by Architect] <Insert area> for water penetration according to AAMA 501.2. Test assembly after installation of composite support system but prior to installation of cement backer board at thin brick applications in accordance with Section 072726 "Membrane Air Barriers."

3.14 REPAIRING AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

B. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooiling joints.

C. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
   1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
   2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
   3. Protect adjacent nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
   4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
   6. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.

3.15 WATER REPELLENT AND GRAFFITI CONTROL

A. Application:
   1. Before applying, read “Preparation” and “Safety Information” sections in the Manufacturer’s Product Data Sheet. Refer to the Product Data Sheet for additional information about application of water repellants and graffiti control. Do not dilute or alter.
   2. Apply products in accordance with manufacturer’s written instructions at a rate and thickness to match approved mockup Sample and in a manner that does not alter finish appearance of masonry.

B. Dense, Smooth Surfaces:
   1. Apply enough in a single saturating application to completely wet the surface without creating drips, puddles or rundown. Brush out or back roll all runs and drips for uniform appearance. Do not over apply. Over application may cause unacceptable color change. One application is normally enough. Always test for application rate.

C. Protect treated surfaces from rain for a minimum of 6 hours after application.

D. Demonstrate graffiti removal to Owner’s representative.
3.16 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

B. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above or recycled, and other masonry waste, and legally dispose of off Owner’s property in accordance with Section 017419 “Construction Waste Management and Disposal.”

END OF SECTION
SECTION 050413 - COMMON SUBMITTAL REQUIREMENTS FOR METALS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:

1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.

1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:

1. Shop Drawings.
2. Product Data.
3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
   2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
   3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
   4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
      a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
   1. Refer to Section 01330 for quantity of days allowed for review.
   2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER'S AND GENERAL CONTRACTOR'S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect's staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:

1. Action Codes Permitting Use:
   a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
   b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
   c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect's notations and Contract Document requirements.
d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.

2. Action Code Prohibiting Use:
   a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
   a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. Informational Submittals: For Architect's information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

1. Action Code for Information Only:
   a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.
   1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.
   1. Submittal Numbering: See below.
   2. Contact Information: Full Name, Phone Number and Email Address.

B. Submittal Definition
   1. Each submittal consists of items from only ONE Specifications section.
2. Complete Submittal: If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.

3. Partial Submittals: If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).

4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.

C. Submittal Numbering

1. Number submittals as described below to assist tracking.

2. Number each submittal in the format nnnnnn-nn.

   a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.

   b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.

   c. P-Number for Partial Submittals: Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.

   d. R-Number for Re-submittals: Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.

   e. Examples:

3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS

A. Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.

B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:

   1. Submittal Number: See Submittal Numbering in Submittal Transmittal Requirements paragraph.

D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION
SECTION 050525 - POST-INSTALLED CONCRETE ANCHORS

PART 1 – GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Post-installed mechanical anchors in concrete, including:
      a. Wedge-type expansion anchors approved for use for seismic applications in cracked and uncracked concrete.
      b. Screw-type drilled-in anchors approved for use for seismic applications in cracked and uncracked concrete.
   2. Post-installed adhesive anchors in concrete, approved for use for seismic applications in cracked and uncracked concrete.

B. Related Sections:

1.2 REFERENCES

1.3 DEFINITIONS

A. Nominal Embedment Depth: Minimum length from concrete surface to end of anchor following completion of anchor installation. For wedge-type anchors, nominal embedment depth shall be measured following application of installation torque.

1.4 SUBMITTALS

A. General: Submit the following in accordance with Division 01, "Submittal Procedures".
   1. Manufacturer's product data.
   2. Manufacturer’s installation instructions.
   3. ICC-ES or IAPMO-ES Evaluation Reports.

1.5 QUALITY ASSURANCE

A. Certifications: Anchors shall have an active ICC-ES or IAPMO-ES Evaluation Report in accordance with the following ICC-ES Acceptance Criteria:
   1. Mechanical Anchors in Concrete: Acceptance Criteria for Mechanical Anchors in Concrete Elements (AC 193).

PART 2 – PRODUCTS

2.1 MECHANICAL ANCHORS

A. General: Anchors shall be tested and approved for use in cracked and uncracked concrete in accordance with ICC-ES AC 193.

1. Anchors installed through underside of steel deck shall be tested and approved for installation through the soffit of concrete-filled metal deck assemblies in accordance with ICC-ES AC 193.

B. Acceptable Products: Where anchor manufacturer and product are indicated on Drawings, provide designated product.

1. Contractor shall be allowed to substitute products of other manufacturer's, subject to demonstrating equivalent tension and shear strength to specified anchor, under project installation conditions. Product substitutions are subject to DSA review and approval, submitted by Architect as a SSC per IR A-6.

2. Where anchor design is prepared by Trade Subcontractor's Engineer, use product designated by Trade Subcontractor's Engineer, subject to meeting requirements of this Section.

C. Wedge Anchors: Wedge type, torque-controlled expansion anchors approved for use in cracked and uncracked concrete. Size and nominal embedment depth as indicated on Drawings.

1. Material: Unless otherwise indicated on the Drawings, provide carbon steel anchors with zinc plating in accordance with ASTM B633, SC1, Type III. As indicated on the Drawings, provide AISI Type 304 or Type 316 stainless steel anchors with manufacturers matching nut and washer.

2. Acceptable Products: Where anchor product and manufacturer are not indicated on Drawings or designated by Trade Subcontractor's Engineer, provide one of the following:
   a. Kwik Bolt TZ, by Hilti, Inc. per ICC ESR 1917.

D. Screw Anchors: Hardened steel, screw-type anchors or rod hangers approved for use in cracked and uncracked concrete. Diameter and nominal embedment depth as indicated on Drawings.

1. Limitations: Anchors shall be used in dry interior environments only.

2. Material: Case hardened low carbon steel, with zinc plating in accordance with ASTM B633, SC1, Type III.

3. Acceptable Products: Where anchor product and manufacturer are not indicated on Drawings or designated by Trade Subcontractor's Engineer, provide one of the following:
   a. Kwik HUS-EZ screw anchor and HUS-EZ1 rod hanger, by Hilti per ICC ESR 3027

2.2 ADHESIVE ANCHORS

A. Adhesive Anchors: Threaded steel rod or inserts complete with nuts and washers, epoxy adhesive injection system, and manufacturer’s installation instructions.
B. General: Anchors shall be tested and approved for use to resist seismic forces (IBC Seismic Design Categories A to F) in cracked and uncracked concrete in accordance with ICC-ES AC 308.

C. Epoxy Adhesive: Two-component, 100% solids, structural epoxy conforming to ASTM C881, Type IV; Grade 3; prepackaged in cartridges for manually or pneumatically operated caulking gun and automatically mixed at nozzle.
   1. Where anchor manufacturer and product are indicated on Drawings, provide designated product.
   2. Contractor shall be allowed to substitute products of other manufacturer's, subject to demonstrating equivalent tension and shear strength to specified anchor, under project installation conditions.
   3. Where anchor design is prepared by Trade Subcontractor's Engineer, use product designated by Trade Subcontractor's Engineer, subject to meeting requirements of this Section.
   4. Acceptable Products: Where anchor product and manufacturer are not indicated on Drawings or designated by Trade Subcontractor's Engineer, provide one of the following:
      a. HIT RE500 V3 Epoxy Adhesive Anchoring System, by Hilti, Inc. (ICC ESR-3814)
      b. Set-XP Epoxy Adhesive, by Simpson Strong-Tie Co. (ICC ESR-2508)

D. Acrylic Adhesive: Hybrid Adhesive: Two-component, hybrid adhesive prepackaged in cartridges for manually or pneumatically operated caulking gun and automatically mixed at nozzle. Approved for use in cracked and uncracked concrete in accordance with ICC ES AC308 or ACI 355.4, as demonstrated by an active ICC or IAPMO Evaluation Service Report.
   1. Acceptable Products: Where anchor product and manufacturer are not indicated on Drawings or designated by Trade Subcontractor's Engineer, provide one of the following:
      a. HIT -HY 200 Adhesive, Hilti Inc. ICC ESR 3187
      b. AT-XP Adhesive, Simpson Strong-Tie Co UES ESR 0263

E. Threaded Rod:
   1. Material: Unless otherwise indicated on the Drawings, furnish carbon steel threaded rods conforming to ASTM A36 or ASTM A193 Type B7. As indicated on the Drawings, provide Type 304 or Type 316 stainless steel anchors with manufacturers matching nut and washer.
   2. Finish: Furnish carbon steel rods with zinc plating in accordance with ASTM B633, SC1, Type III at dry interior locations. Furnish carbon steel rods with hot-dipped galvanized coating complying with ASTM A153 at exterior and damp interior locations.

PART 3 – EXECUTION

3.1 INSTALLATION

A. General: Install anchors in conformance with manufacturer's written instructions.

B. Examination:
   1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Notify Owner's Representative for clarification where reinforcing steel or other embedded items require relocation of anchors or cutting of reinforcement.
2. Notify Owner's Representative for clarification where anchors appear to be located too close to edge of concrete, in particular where edge is not shown on Drawing detail.

3. Notify Owner's Representative for clarification where concrete thickness is inadequate to achieve specified anchor embedment. Minimum concrete thickness shall allow for specified embedment, plus one anchor diameter allowance for overdrilling, plus 3/4 inch minimum cover from end of hole to concrete surface.

C. Drilling:
1. Do not drill holes in concrete mix has achieved full design strength.
2. Drill holes with rotary impact hammer drills using carbide-tipped bits with diameter as recommended by anchor manufacturer. Reduce impact as hole approaches concrete surface as necessary to prevent cracking and spalling. Use core bits only with approval of Owner's Representative and only for mechanical anchors.
3. Holes shall be drilled perpendicular to the concrete surface, unless otherwise shown on Drawings. Anchors shall be drilled to within 5 percent of specified alignment.
4. Exercise care in drilling to avoid damaging existing reinforcing, conduits and other embedded items.

D. Wedge Anchors:
1. Drill holes designated nominal embedment depth plus one anchor diameter minimum. End of hole shall be 3/4 inch minimum clear from concrete surface.
2. Remove dust and debris with pressurized air, in accordance with manufacturer's instructions.
3. Set anchors to designated nominal embedment depth, plus an allowance for withdrawal during torque tightening.
4. Tighten using a torque wrench to manufacturer's recommended installation torque. Following attainment of 10% of recommended torque, achieve 100% of designated torque within 5 or fewer turns of the nut. If torque is not achieved, the anchor shall be removed and replaced unless otherwise directed by the Owner's Representative.

E. Screw Anchors:
1. Take particular care to achieve proper hole diameter. Use only sharp bits with diameter recommended by manufacturer. Use drilling equipment and methods to prevent enlargement of holes by wobble.
2. Remove dust and debris with pressurized air, in accordance with manufacturer's instructions.
3. Install the anchor in accordance with manufacturer's instructions with an impact wrench. Take care not to overtighten anchor; note that manufacturer's maximum installation torque is not the torque intended to be achieved during proper installation.

F. Adhesive Anchors:
1. Drill holes to diameter recommended by manufacturer with rotary impact hammer drills using carbide-tipped bits; core bits shall not be permitted.
2. Thoroughly clean holes by brushing and blowing with compressed air in accordance with manufacturer's instructions. Clean immediately prior to anchor installation under observation of Special Inspector.
3. Inject adhesive into holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive. Follow manufacturer recommendations to ensure proper mixing of adhesive components. Sufficient adhesive shall be injected in the hole to ensure that the annular gap is filled to the surface. Remove excess adhesive from the surface. Shim anchors with suitable device to center the anchor in the hole.
4. Do not disturb or load anchors before manufacturer specified cure time has elapsed.
3.2 REPAIR OF DEFECTIVE WORK

A. Remove and replace misplaced or malfunctioning anchors. Fill empty anchor holes and patch failed anchor locations with high-strength non-shrink, nonmetallic grout. Anchors that fail to meet proof load or installation torque requirements shall be regarded as malfunctioning.

3.3 FIELD QUALITY CONTROL

A. Testing Agency will:

1. Review manufacturer's recommended installation and inspection procedures, as contained in Evaluation Service Report.

2. Special Inspect installation for conformance with Contract Documents, manufacturer's recommendations, and requirements of the applicable ES report. Verify that anchors are being installed by trained installers.
   a. Periodically inspect installation of mechanical anchors.
   b. Continuously inspect installation of adhesive anchors during hole cleaning and anchor installation.

3. Test anchors in accordance with requirements of CBC Section 1910A.5, including testing frequency and method for adhesive anchors.
   a. Test Loads: As shown on Drawings, or as otherwise designated by Owner’s Representative, in conformance with test load requirements CBC Section 1910A.5.4.
   b. Testing Frequency, Structural Applications: 100 percent, except frequency can be reduced in accordance with CBC Section 1910A.5.3.
   c. Testing Frequency, Equipment and Component Anchorage: 50 percent or alternate bolts in a group, including at least one-half of the anchors in each group shall be tested.

END OF SECTION
SECTION 051200 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Structural steel framing, steel lintels, shelf angles, embedded plates, open web joist bearing plates, steel beam bearing plates, slide bearings at expansion joints, roof opening frames, mechanical equipment support frames and other items defined as structural steel.
   2. Shear stud connectors, deformed bar anchors, anchor rods, expansion bolts and other incidental items of structural steel required to be built into concrete or masonry and attached to the structural frame.
   4. Erection of structural steel.
   5. Welding of reinforcing supplied by Section 03 20 00 "Concrete Reinforcing".
   6. Grout below steel bearing and base plates.

B. Related Sections:
   1. Section 01400 "Quality Control Requirements" for independent testing agency procedures and administrative requirements.
   2. Section 051213 "Architecturally Exposed Structural Steel Framing" for additional requirements for architecturally exposed structural steel.
   3. Section 053100 "Steel Decking" for field installation of shear connectors through deck.
   4. Section 055000 "Metal Fabrications" for miscellaneous steel fabrications and other metal items not defined as structural steel.
   5. Division 05 "Metal Stairs."
   6. Section 099600 "High-Performance Coatings" for surface-preparation and priming requirements at high-performance coatings.

1.2 REFERENCES

D. AISC Specification for Structural Joints Using ASTM A325 or A490 Bolts.
E. AWS D1.1: Structural Welding Code - Steel.
F. AWS D1.4: Structural Welding Code - Reinforcing Steel.
G. AWS D1.8: Structural Welding Code – Seismic Supplement
H. SSPC: The Society for Protective Coatings.
1.3 DEFINITIONS

A. Structural Steel: Elements of structural-steel frame, as classified by AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

B. Seismic-Load-Resisting System: Elements of structural-steel frame designated as "SLRS" or along grid lines designated as "SLRS" on Drawings, including columns, beams, and braces and their connections.

C. Heavy Sections: Rolled and built-up sections as follows:
   1. Shapes included in ASTM A6/A6M with flanges thicker than 1-1/2 inches.
   2. Welded built-up members with plates thicker than 2 inches.
   3. Column base plates thicker than 2 inches.

D. Protected Zone: Structural members or portions of structural members indicated as "Protected Zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.

E. Demand Critical Welds: Those welds, the failure of which would result in significant degradation of the strength and stiffness of the Seismic-Load-Resisting System and which are indicated as "Demand Critical" or "Seismic Critical" on Drawings.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:
   1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

C. Shop Drawings: Submit fabrication and erection drawings in accordance with Section 01 33 00. Show fabrication of structural-steel components. Before preparation of shop drawings and fabrication of materials affected by existing construction, field verify existing elevations, dimensions and conditions as shown on Contract Documents and report discrepancies to Architect for resolution. Submit all relevant drawings together so that review can be complete.
   1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
   2. Include embedment drawings.
   3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
   4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.
   5. Indicate items to be galvanized, where required.
   6. Identify members and connections of the seismic-load-resisting system.
   7. Indicate locations and dimensions of protected zones.
   8. For each joint, identify demand critical welds including prequalified welded joint designation and welding process.
   9. Indicate all locations of SLRS where nondestructive testing is to be performed by Fabricator.
   10. Include welding access hole dimensions, surface profile and finish requirements.
   11. Indicate where weld tabs are to be removed.
D. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs):
Provide according to AWS D1.1, "Structural Welding Code - Steel," for each welded joint qualified by testing, including the following:
1. Power source (constant current or constant voltage).
2. Electrode manufacturer and trade name, for demand critical welds.

1.5 INFORMATIONAL SUBMITTALS
A. Welding certificates.
B. Mill test reports for structural steel, including chemical and physical properties.

1.6 QUALITY ASSURANCE
A. Fabricator Qualifications: A fabricator experienced in fabricating structural steel similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to fabricate structural steel without delaying the Work.
   1. Fabricator shall participate in the AISC Quality Certification Program and be designated an AISC-Certified Plant, Category BU.
B. Installer Qualifications: An experienced installer who has completed structural steel work similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.
   1. Installer shall participate in the AISC Quality Certification Program and be designated an AISC-Certified Erector, Category ACSE.
C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code - Steel."
   1. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.
D. Comply with applicable provisions of the following specifications and documents:
   1. AISC 303.
   2. AISC 341 and AISC 341s1.
   3. AISC 360.
   4. RCSC's "Specification for Structural Joints Using ASTM A325 or A490 Bolts."

1.7 DELIVERY, STORAGE, AND HANDLING
A. Deliver materials to site at such intervals to ensure uninterrupted progress of work.
B. Deliver anchor rods and anchorage devices to be embedded in cast-in-place concrete or masonry in ample time so as to not delay work.
C. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.
1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

D. Store fasteners in a protected place in sealed containers with manufacturer’s labels intact.
   1. Fasteners may be repackaged provided Owner’s testing and inspecting agency observes repackaging and seals containers.
   2. Only new and factory lubricated fasteners shall be used on the project. Fasteners that have become dry or rusty are not permitted.

E. Store welding electrodes in hermetically sealed containers. Electrodes exposed to the atmosphere for periods greater than those permitted shall be redried in accordance with AWS D1.1.

1.8 STRUCTURAL STEEL TO RECEIVE SFRM

A. Provide structural steel substrate to receive sprayed fire-resistive materials free of paint, lubricants, oils, dirt or other contaminants which would significantly impair adhesion of sprayed materials.

1.9 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers’ recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

PART 2 - PRODUCTS

2.1 STRUCTURAL-STEEL MATERIALS

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25%.

B. W-Shapes and WT cut from W-shapes: ASTM A992.

C. Channels, Angles and Miscellaneous Shapes: ASTM A36.

D. Plate and Bar: Per Drawings.

E. Cold-Formed Hollow Structural Sections: ASTM A500, Grade B, structural tubing.
F. Steel Pipe: ASTM A53, Type E or S, Grade B.

G. Welding Electrodes: Comply with AWS requirements, including requirements for welds in the Seismic Force Resisting System and Demand Critical welds.

2.2 BOLTS, CONNECTORS, AND ANCHORS

A. High-Strength Bolts, Nuts, and Washers: ASTM A325, Type 1, heavy-hex steel structural bolts or ASTM F1852 tension-control, bolt-nut-washer assemblies with splined ends; ASTM A563, Grade C, heavy-hex carbon-steel nuts; and ASTM F436, Type 1, hardened carbon-steel washers.
   1. Direct-Tension Indicators: ASTM F959, Type 325, compressible-washer type with plain finish.

B. High-Strength Bolts, Nuts, and Washers: ASTM A490, Type 1, heavy-hex steel structural bolts or ASTM F2280 tension-control, bolt-nut-washer assemblies with splined ends; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436, Type 1, hardened carbon-steel washers with plain finish.
   1. Direct-Tension Indicators: ASTM F959, Type 490, compressible-washer type with plain finish.

C. Shear Connectors: ASTM A108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1, Type B.

D. Anchor Rods: ASTM F1554, Grade 36
   2. Head: Form head with ASTM A563, Grade A, heavy hex nut. Lock against loosening with suitable jam nut.
   3. Plate Washers: ASTM A572 Grade 50. Provide steel plate of sufficient size to completely cover hole in baseplate; minimum thickness shall be 1/3 of bolt diameter.

E. High Strength Anchor Bolt Assembly:
   1. Anchor rod: ASTM F1554, Grade 105, with Supplementary Requirement S4, "Grades 55 and 105 Charpy Impact Requirements at +40 deg F." Mark exposed end in accordance with Supplementary Requirement S3, "Permanent Grade Identification".
   2. Head: Form head with round steel plate washer sandwiched between ASTM A194, Grade 2H, heavy hex nuts. Plate washer size shall be 3 times bolt diameter and thickness shall be 1/2 of the bolt diameter, unless otherwise designated.
   4. Washer: Provide steel plate washer of sufficient size to completely cover hole in baseplate; minimum thickness shall be 1/3 of bolt diameter.

G. Non-High-Strength Bolts, Nuts, and Washers: ASTM A307, Grade A.
H. Deformed Bar Anchors: ASTM A496 or ASTM A1064.

I. Clevises and Turnbuckles: Made from cold-finished carbon steel bars, ASTM A108, Grade 1035.

J. Eye Bolts and Nuts: Made from cold-finished carbon steel bars, ASTM A108, Grade 1030.

L. Hot Dip Galvanizing for Bolts and Similar Threaded Fasteners: ASTM A153.

2.3 PRIMER

A. Shop-Applied Primer for Steel to Receive High-Performance Coating (HPC): Coordinate with Section 09 96 00 - High-Performance Coatings.

B. Primer: Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

C. Galvanizing Repair Paint: ASTM A780.

D. Coating for Steel in Contact with Earth: 3M SkotchKote 306, liquid epoxy, or approved equal.

2.4 GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.5 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate in accordance with reviewed shop drawings, AISC's "Code of Standard Practice for Steel Buildings and Bridges" and AISC 360.

1. Camber structural-steel members where indicated.
2. Fabricate beams with rolling camber up.
3. Identify high-strength structural steel according to ASTM A6 and maintain markings until structural steel has been erected.
4. Mark and match-mark materials for field assembly.
5. Clip angles, headed shear connectors or other components shown welded to top flanges of beams, except for end connections, shall be shipped loose for attachment in field.
6. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1.

C. Bolt Holes: Cut, drill, mechanically thermal cut, or punch standard bolt holes perpendicular to metal surfaces.
D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 1, "Solvent Cleaning" or SSPC-SP 2, "Hand Tool Cleaning".

F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1 and manufacturer's written instructions.

G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.
   1. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
   2. Weld threaded nuts to framing and other specialty items indicated to receive other work.

H. Where lintel and soffit plates are indicated with edge flush with masonry, horizontal leg shall either terminate 1/4 inch short of masonry at jambs, or be notched at end extending into masonry to permit mortar joints across face. At beam and plate lintels spanning from jamb to jamb of opening, stop plate short of masonry. Where bearing of horizontal leg is required at opening jamb, notch lintel end to permit full 3/4 inch of mortar cover along face.

2.6 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A325 or A 490 Bolts" for type of bolt and type of joint specified.

B. Weld Connections: Comply with AWS D1.1 and AWS D1.8 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
   1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.7 SHOP PRIMING

A. Shop prime steel surfaces unless otherwise noted. Do not shop prime the following:
   1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
   2. Surfaces to be field welded.
   3. Surfaces to be high-strength bolted with slip-critical connections.
   4. Surfaces to receive sprayed fire-resistant materials applied fireproofing.
   5. Galvanized surfaces.

B. Shop prime steel surfaces concealed by interior building finish.

C. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:
   1. SSPC-SP 2, "Hand Tool Cleaning."
   2. SSPC-SP 3, "Power Tool Cleaning."
   3. SSPC-SP 7/NACE No. 4, "Brush-Off Blast Cleaning."
   4. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
a. Provide at exposed structural steel surfaces.

D. Priming: Immediately after surface preparation, apply primer according to manufacturer’s written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

E. Priming at High-Performance Coatings: Comply with Section 09 96 00 "High-Performance Coatings."
   2. Apply shop primer in accordance with High-Performance Coating manufacturer’s instructions after surface preparation in compliance with primer manufacturer’s requirements. Maintain minimum coverage at joints, corners, edges and exposed surfaces.

2.8 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A123.
   1. Fill vent and drain holes that will be exposed in the finished Work unless they will function as weep holes, by plugging with zinc solder and filing off smooth.

2.9 SOURCE QUALITY CONTROL

A. Testing and Inspection: Owner will engage qualified special inspectors in accordance with Section 01 45 33.
   1. Qualifications: The minimum category of special inspector required to perform services outlined below are noted by qualifications in parentheses. The definitions of the categories of special inspector are included in Section 01 45 33.

B. Coordinate with Independent Testing and Inspecting Agency employed by the Owner to perform shop quality control inspection and testing listed below:
   1. High Strength Bolting:
      a. General Requirements:
         1) On a periodic basis, verify bolting material conforms to specified ASTM standards.
         2) On a periodic basis, verify that the requirements for bolts, nuts, washers, paint, and installation/tightening standards are met.
         3) On a continuous basis, observe preinstallation testing and calibration procedures when such procedures are required by the installation method or in the Contract Documents.
            a) Where required by the installation method for slip-critical and pretensioned bolts, a representative sample of not fewer than three complete fastener assemblies of each combination of diameter, length, grade and lot to be used shall be tested in a tension calibrator to verify that the pretensioning method develops a pretension that is equal to or greater than 1.05 times the minimum pretension specified for the diameter and grade of bolt. Testing shall be conducted by Contractor and observed by the Special Inspector.
b. Slip-Critical and Pretensioned Bolts:
   1) On a periodic basis, visually inspect faying surfaces and bolt type for all slip-critical bolted connections for general conformance with the Contract Documents prior to bolting.
   2) On a periodic basis, verify that selected procedure is used to tighten bolts.
   3) On a continuous basis, observe bolt installation when the calibrated wrench method or turn-of-nut method without matchmarking is used.
   4) On a periodic basis, observe bolt installation when the turn-of-nut method with matchmarking, direct tension indicator, or tension-control (twist-off bolt) methods are used. Visually verify tightening of all bolts.

c. Snug-Tightened Bolts:
   1) On a periodic basis, visually inspect to verify that all plies of connected elements have been brought into contact, at 100% of connections.

2. Welding:
   a. Fillet Welds:
      1) On a periodic basis, visually inspect 100% of all fillet welds 5/16" or less, for size, length and quality, per AWS D1.1.
      2) On a continuous basis, inspect welding process for all multi-pass fillet welds and single-pass fillet welds larger than 5/16".

   b. Partial Penetration Welds:
      1) On a continuous basis, inspect welding process for all partial penetration groove welds.
      2) Test 100% of all partial penetration welds 5/16 inch and larger, using Ultrasonic Testing per AWS D1.1, Section 6. Test 25% of all partial penetration welds less than 5/16 inch, using Magnetic Particle Testing per ASTM E-709, performed on root pass and on finished weld.

   c. Full Penetration Welds:
      1) On a continuous basis, inspect welding process for all full penetration groove welds.
      2) Test 100% of all full penetration welds 5/16 inch and larger, using Ultrasonic Testing per AWS D1.1 Section 6. Test 25% of all full penetration welds less than 5/16 inch, using Magnetic Particle Testing per ASTM E-709, performed on root pass and on finished weld.
      3) Test 25% of all SLRS beam-to-column full penetration welds using Magnetic Particle Testing - Yoke Method per ASTM E-709 and AWS D1.8, performed on root pass and on finished weld.

3. Additional SLRS Testing and Inspection: In addition to the requirements above, inspection, testing and documentation for quality control and quality assurance for the seismic load resisting system shall be performed in accordance with the Quality Assurance Plan as defined in AISC 341-05, appendix Q. Additionally, welding inspection and nondestructive testing shall be performed in accordance with AWS D1.8 clause 7, including the following nondestructive testing work:
   a. Nondestructive testing of welds:
      1) In addition to the qualification requirements of Section 01 45 33, all Ultrasonic Testing technicians shall be certified by their employer for Flaw Detection in accordance with AWS D1.8, Annex F.
      2) Test 100% of all SLRS wide-flange member web k-areas using Magnetic Particle Testing where welding of doubler plates, continuity plates or stiffeners has been performed in the k-area.
3) Where weld tabs have been removed, test 100% of all weld ends using Magnetic Particle Testing. Exception: removed weld tabs at continuity plate welds need not be tested.

4) If a repair to a weld tab removal site is made by additional welding, test 100% of the repaired area and area immediately adjacent area to the repair using Magnetic Particle Testing.

5) If a repair to a weld access hole is made within a Protected Zone, test 100% of the access hole using Magnetic Particle Testing or Dye Penetrant Testing.

6) If a welding repair is performed within a Protected Zone, test 100% of the repair area using Magnetic Particle Testing.

C. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with steel Erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

1. Set plates for structural members on wedges, shims, or setting nuts as required.
2. Weld plate washers to top of baseplate where indicated.
3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer’s written installation instructions for shrinkage-resistant grouts.
C. Maintain erection tolerances of structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges."

D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
   1. Level and plumb individual members of structure.
   2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.

F. Do not use thermal cutting during erection unless approved by Structural Engineer of Record. Finish thermally cut sections within smoothness limits in AWS D1.1.

G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

H. Remove erection bolts on welded, Architecturally Exposed Structural Steel; fill holes with plug welds; and grind smooth at exposed surfaces.

I. Do not field cut openings through structural steel members for passage of conduit, pipes, or ducts without obtaining written permission from Structural Engineer of Record. Wherever permission is given, provide openings and additionally reinforce member as directed by Structural Engineer of Record.

J. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1 and manufacturer's written instructions.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high strength bolts according to RCSC’s "Specification for Structural Joints Using ASTM A325 or A490 Bolts" and as indicated below for type of bolt and type of joint specified. If Twist-Off Tension-Control Bolts or Direct-Tension-Indicators are used, bolt assemblies shall be installed following recommendations of the manufacturer, and the following minimum requirements.
   1. ASTM F436, hardened carbon-steel washers shall be used at the following locations:
      a. To cover over-sized and slotted holes.
      b. Beveled washer at joint face with a slope greater than 1:20.
      c. Below the nut of a Twist-Off Tension-Control Bolt Assembly for Pretensioned, Slip-Critical and Bearing Joints when the spline is intended to be severed.
      d. Below the turned element when using a Calibrated Wrench Pretensioning method for Pretensioned and Slip-Critical Joints.
      e. At Pretensioned and Slip-Critical Joints with ASTM A490 bolts, under the bolt head or nut when bearing against connected material with a specified minimum yield strength less than 40 ksi.
   2. For Pretensioned and Slip-Critical Joints, assemblies shall be initially installed as a Snug-tightened joint. For Slip-Critical Joints with Tension-Control Bolt assemblies, the initial Snug-tightened joint shall also be accomplished without severing the splined end. If a
splined end is severed during this operation the bolt assembly shall be removed and replaced.

3. Snug-tightened condition shall bring the connected plies into firm contact. Compacting the joint to a snug-tight condition shall progress systematically from the most rigid part of the joint. Subsequent bolt tightening shall also progress systematically from the most rigid part of the joint.

4. Fastener components shall be protected from dirt and moisture in closed containers at the site of installation. Only as many fastener components as are anticipated to be installed during the work shift shall be taken from protected storage. Fastener components that are not incorporated into the work shall be returned to protected storage at the end of the work shift. Fastener components shall not be cleaned or modified from the as-delivered condition. Bolt assemblies that accumulate rust or dirt shall not be incorporated into the work.

B. Weld Connections: Comply with AWS D1.1 and AWS D1.8 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.

2. Remove backing bars or runoff tabs where indicated, back gouge, and grind steel smooth.

3. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC’s "Code of Standard Practice for Steel Buildings and Bridges" for mill material.

3.5 FIELD QUALITY CONTROL

A. Testing and Inspection: Owner will engage qualified special inspectors.

B. Coordinate with independent testing and inspecting agency engaged by the Owner to perform field quality control inspection and testing.

1. Provide necessary scaffolding or temporary platforms required by testing agency in order to perform their work. Such scaffolding or platforms shall comply with safety regulations and shall be acceptable to testing agency.

C. High Strength Bolting:

1. General Requirements:
   a. On a periodic basis, verify bolting material conforms to specified ASTM standards.
   b. On a periodic basis, verify that the requirements for bolts, nuts, washers, paint, and installation/tightening standards are met.
   c. On a continuous basis, observe preinstallation testing and calibration procedures when such procedures are required by the installation method or in the Contract Documents.

1) Where required by the installation method for slip-critical and pretensioned bolts, a representative sample of not fewer than three complete fastener assemblies of each combination of diameter, length, grade and lot to be used shall be tested in a tension calibrator to verify that the pretensioning method develops a pretension that is equal to or greater than 1.05 times the minimum pretension specified for the diameter and grade of bolt. Testing shall be conducted by Contractor and observed by the Special Inspector.
2. Slip-Critical and Pretensioned Bolts:
   a. On a periodic basis, visually inspect faying surfaces and bolt type for all slip-critical bolted connections for general conformance with the Contract Documents prior to bolting.
   b. On a periodic basis, verify that selected procedure is used to tighten bolts.
   c. On a continuous basis, observe bolt installation when the calibrated wrench method or turn-of-nut method without matchmarking is used.
   d. On a periodic basis, observe bolt installation when the turn-of-nut method with matchmarking, direct tension indicator, or tension-control (twist-off bolt) methods are used. Visually verify tightening of all bolts.

3. Snug-Tightened Bolts:
   a. On a periodic basis, visually inspect to verify that all plies of connected elements have been brought into contact, at 100% of connections.

D. Welding:
1. Allow Testing Agency to visually inspect field welding of steel members in accordance with Section 6, Inspection of AWS Structural Welding Code. Correct work that is not approved and re-inspect until welds are acceptable to Testing Agency. Perform such additional inspecting and work at no additional cost to Owner.
2. Fillet Welds:
   a. On a periodic basis, visually inspect 100% of all fillet welds 5/16" or less, for size, length and quality, per AWS D1.1.
   b. On a continuous basis, inspect welding process for all multi-pass fillet welds and single-pass fillet welds larger than 5/16".
3. Partial Penetration Welds:
   a. On a continuous basis, inspect welding process for all partial penetration groove welds.
   b. Test 100% of all partial penetration welds 5/16 inch and larger, using Ultrasonic Testing per AWS D1.1, Section 6. Test 25% of all partial penetration welds less than 5/16 inch, using Magnetic Particle Testing per ASTM E-709, performed on root pass and on finished weld.
4. Full Penetration Welds:
   a. On a continuous basis, inspect welding process for all full penetration groove welds.
   b. Test 100% of all full penetration welds 5/16 inch and larger, using Ultrasonic Testing per AWS D1.1 Section 6. Test 25% of all full penetration welds less than 5/16 inch, using Magnetic Particle Testing per ASTM E-709, performed on root pass and on finished weld.
   c. Test 25% of all SLRS beam-to-column full penetration welds using Magnetic Particle Testing - Yoke Method per ASTM E-709 and AWS D1.8, performed on root pass and on finished weld.
5. Stud Shear Connector Welds:
   a. Verify all ceramic welding ferrules have been removed and visually inspect 100% of installed studs for full 360° flash. Alternatively, sound 100% of installed studs, for full penetration weld, using an 8 lb. maul.
   b. Test all questionable studs, not showing full 360° flash by bending studs to 15° from vertical, away from weld discontinuity, per AWS D1.1, Section 7.
c. Randomly test all other studs by bending to 15° from vertical as noted:
   1) Studs welded through deck: 15%.
   2) Studs welded to bare steel: 5%.

6. Miscellaneous Metals, Inserts and Prefabricated Components: Where integrity of the connections impact life safety or performance of the building structure, provide testing and inspection as for typical welds previously specified.

7. Procedures and Preparation:
   a. Verify qualifications of all welders as AWS certified.
   b. Verify manufacturer's certificates of compliance for weld filler materials.
   c. Verify proposed welding procedures and materials meet AWS requirements.
   d. On a periodic basis, verify adequate preparation of faying surfaces.
   e. On a periodic basis, verify preheat and interpass temperatures of steel, proper technique and sequence of welding, and cleaning and number of passes are provided as required.

E. Additional SLRS Testing and Inspection: In addition to the requirements above, inspection, testing and documentation for quality control and quality assurance for the seismic load resisting system shall be performed in accordance with the Quality Assurance Plan as defined in AISC 341-10, Section J. Additionally, welding inspection and nondestructive testing shall be performed in accordance with AWS D1.8 clause 7, including the following nondestructive testing work:

   1. Nondestructive testing of welds:
      a. In addition to the qualification requirements of Section 01 45 33, all Ultrasonic Testing technicians shall be certified by their employer for Flaw Detection in accordance with AWS D1.8, Annex F.
      b. Where weld tabs have been removed, test 100% of all weld ends using Magnetic Particle Testing. Exception: removed weld tabs at continuity plate welds need not be tested.
      c. If a repair to a weld tab removal site is made by additional welding, test 100% of the repaired area and area immediately adjacent area to the repair using Magnetic Particle Testing.
      d. If a repair to a weld access hole is made within a Protected Zone, test 100% of the access hole using Magnetic Particle Testing or Dye Penetrant Testing.
      e. If a welding repair is performed within a Protected Zone, test 100% of the repair area using Magnetic Particle Testing.

F. Protected Zones

   1. Verify location and extents of all Protected Zones with the Contract Documents.
   2. On a periodic basis, verify no holes and unapproved attachments have been placed in the Protected Zones.

G. Headed Shear Studs

   1. Verify stud quantities are as shown on Contract Documents.
   2. Verify stud placement layout and spacing requirements are as shown on Contract Documents.

H. Mechanical Fasteners (Misc.)

   1. Fasteners: Visually inspect specified size, spacing, embedment and location. See also Specification sections:
      a. 03 30 00 - Cast-In-Place Concrete.
b. 05 31 00 - Steel Decking.

c. 05 40 00 - Cold Formed Metal Framing.

I. Structural Configuration:

1. Submittals: On a periodic basis, verify mill test reports and other submitted
documentation, for compliance with Contract Documents.
   a. Materials: On a periodic basis, verify materials delivered to site comply with
      Contract Documents and approved shop drawings.
   b. Bolts.
   c. Electrodes.
   d. Mechanical Fasteners.
   e. Deck Gauge.

2. Detail Compatibility, on a periodic basis:
   a. Review project documents affecting integrity of the structure, including Contract
      Documents and pertinent submittals (approved shop drawings).
   b. Visit site, at intervals appropriate to the stage of construction, to perform review of
      the structure and visually confirm general compliance with the Contract Documents
      and pertinent submittals.
   c. Inspect the following to verify member orientation, configuration, type and size
      comply with details indicated on the Contract Documents and approved shop
      drawings:
         1) Bracing and stiffening members.
         2) Proper applications of joint details at connections for structural members.
         3) Other work critical to the integrity of the building structure.

J. Conventional Testing and Inspection Requirements:

1. High Strength Bolting:
   a. Bolt Material Test: Test a minimum of two bolts of each ASTM grade and diameter
      specified, for bolt hardness and tensile properties. (SNT-TC-1A).
   b. Fabrication and Erection Tolerances: Verify in-place structure satisfies specified
      tolerances.

K. If special inspection of fabricator's work is required, testing agency may test and inspect
structural steel at plant before shipment. Owner and SER reserve right to reject material not
complying with Contract Documents at any time before final acceptance.

L. Definitions:

   1. ASNT - The American Society for Non-destructive Testing.
   2. NDE - Non-destructive Evaluation.

M. Correct deficiencies in Work that test reports and inspections indicate does not comply with the
Contract Documents.

3.6 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair
galvanizing to comply with ASTM A780.
B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

C. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

END OF SECTION
SECTION 051213 - ARCHITECTURALLY EXPOSED STRUCTURAL STEEL (AESS)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes architecturally exposed structural-steel (AESS).
   1. Requirements in Section 051200 "Structural Steel Framing" apply to AESS as modified in this Section.
B. Related Requirements:
   1. Section 055000 "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other metal items not defined as structural steel.
   2. Section 057100 "Decorative Metal Stairs" for stairs with AESS finishing.
   3. Section 099600 "High-Performance Coatings" for surface preparation and priming requirements.

1.3 DEFINITIONS
A. AESS: Structural steel designated as "architecturally exposed structural steel" or "AESS" in the Contract Documents.

1.4 AESS GRADES
A. General: Comply with 2016 AISC "Code of Standard Practice for Steel Buildings and Bridges," Section 10, for a description of the grading categories used on the Drawings and as follows:
   1. AESS 3: Feature elements viewed at a distance less than 20 feet vertically and horizontally.

1.5 COORDINATION
A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

1.6 ACTION SUBMITTALS
A. Sustainable Design Submittals required by Section 01813 applicable to this Section.
B. Shop Drawings: Show fabrication of AESS components. Shop Drawings for structural steel may be used for AESS provided items of AESS are specifically identified and requirements below are met for AESS.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain. Indicate grinding, finish, and profile of welds.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections. Indicate orientation of bolt heads.
5. Indicate exposed surfaces and edges and surface preparation being used.
6. Indicate special tolerances and erection requirements.
7. Indicate tack welds, temporary braces, backing and fixtures used in fabrication, delivery, and erection.

C. Samples: Submit Samples of AESS to set minimum quality standards for exposed welds for Grades AESS-3 and better.

1. Two steel plates, 3/8 by 8 by 4 inches, with long edges joined by a groove weld and with weld ground smooth.
2. Steel plate, 3/8 by 8 by 8 inches, with one end of a short length of rectangular steel tube, 4 by 6 by 3/8 inches, welded to plate with a continuous fillet weld and with weld ground smooth and blended.
3. Round steel tube or pipe, minimum 8 inches in diameter, with end of another round steel tube or pipe, approximately 4 inches in diameter, welded to its side at a 45-degree angle with a continuous fillet weld and with weld ground smooth and blended.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD, or is accredited by the IAS Fabricator Inspection Program for Structural Steel (AC 172).

1. In addition to the qualifications of steel fabricator listed in Section 051200, engage a steel fabricator experienced in fabricating AESS similar to that for this project and with a successful in-service performance.

B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category ACSE.

1. In addition to the qualifications of steel installer listed in Section 051200, engage a steel installer experienced in erecting AESS similar to that for this project and with a successful in-service performance.

C. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint Endorsement P1, Endorsement P2, and Endorsement P3, or SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."

D. Shop Painting: Paint topcoats and other coatings to be applied over shop primers shall be compatible with shop primers.

E. Provide the following upon request:

1. Qualification Data: For Installer and fabricator.
2. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

F. Mockups: Build first-in-place mockups of AESS to set quality standards for fabrication and installation.
1. Build mockup of typical AESS column as shown on Drawings to be used as Project reference sample.
2. Coordinate high-performance coatings requirements with Section 099600 "High-Performance Coatings."
3. Obtain Architect's approval prior to commencement of remaining Work of this Section.
4. The expectations for the quality of workmanship, fabrication, finishing, and erection of AESS shall be as defined herein. The mockup shall be used as a basis for judgment of the as-built work.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
6. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Use special care in handling to prevent twisting, warping, nicking, bending, and other damage or distortions. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.
1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.
2. Use nylon tie-downs or chains with softeners to avoid damage to edges and surfaces of members.

1.9 FIELD CONDITIONS

A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 STRUCTURAL STEEL MATERIALS

A. Refer to Section 051200 "Structural Steel Framing" for structural steel to be finished as AESS.

2.2 DECORATIVE STEEL STAIRS AND RAILINGS

A. Refer to Section 057100 "Decorative Metal Stairs" and Section 057300 "Decorative Metal Railings" for stair and railing items to be finished as AESS.
2.3 BOLTS, CONNECTORS, AND ANCHORS

A. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.
   1. Finish: Mechanically deposited zinc coating.

B. Corrosion-Resisting (Weathering Steel), Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 3, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

2.4 FILLER

2.5 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Zinc-Rich Primer: Organic zinc-rich, epoxy or urethane primer containing a minimum of 77-percent zinc dust by weight, compatible with topcoats, and as instructed by topcoat manufacturer.

C. Shop Primers: Comply with Section 099600 "High-Performance Coatings."

2.6 FABRICATION

A. Shop fabricate and assemble AESS to the maximum extent possible. Locate field joints at concealed locations. Detail assemblies to minimize handling and to expedite erection.

B. Handling: The fabricator shall handle the steel with care to avoid marking or distorting the steel members:
   1. Slings shall be nylon-type or chains or wire rope with softeners.
   2. Care shall be taken to minimize damage to any shop paint or coating.
   3. When temporary braces or fixtures are required during fabrication or shipment, or to facilitate erection, care shall be taken to avoid blemishes or unsightly surfaces resulting from the use or removal of such temporary elements.
   4. Tack welds not incorporated into final welds shall be treated consistently with requirements for final welds.
   5. Backing and runoff tabs shall be removed and the welds ground smooth.
   6. Bolt heads in connections shall be on the same side, as specified, and consistent from one connection to another.

C. Fabrication Tolerances:
   1. Comply with ASTM A6/A6M and ASTM A500/A500M for permissible tolerances for member depth, width, out of square, and camber and sweep. The following exceptions apply:
      a. For Grade AESS 3, the matching of abutting cross sections shall be required.
b. For Grade AESS 3, the as-fabricated straightness tolerance shall be one-half of that specified in ASTM A6/A6M and ASTM A500/A500M.

2. The tolerance on overall profile dimensions of welded built-up members shall meet the requirements in AWS D1.1/D1.1M. For Grade AESS 3, the as-fabricated straightness tolerance for the member as a whole shall be one-half of that specified in AWS D1.1/D1.1M

3. For Grade AESS 3, copes, miters and cuts in surfaces exposed to view shall have a gap that is uniform within 1/8 in., if shown to be an open joint. If the joint is shown to be in contact, the contact shall be uniform within 1/16 in..

4. For Grade AESS 3, seams shall be oriented as directed by Architect.

D. Surface Condition: For Grade AESS 3, the surface condition of steel given in ASTM A6/A6M shall be acceptable.

E. Curved Members: Fabricate indicated members to curved shape by rolling to final shape in fabrication shop.

   1. Distortion of webs, stems, outstanding flanges, and legs of angles shall not be visible from a distance of 20 feet under any lighting conditions.
   2. Tolerances for walls of hollow steel sections after rolling shall be approximately 1/2 inch.
   3. The as-fabricated variation from the theoretical curvature shall be equal to or less than the standard camber and sweep tolerances permitted for straight members.

F. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

   1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
   2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
   3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.7 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

   1. Joint Type: Slip critical.

B. Weld Connections: Comply with AWS D1.1/D1.1M and AWS D1.8/D1.8M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work, and comply with the following:

   1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding specified tolerances.
   2. Use weld sizes, fabrication sequence, and equipment for AESS that limit distortions to allowable tolerances.
   3. Provide continuous, sealed welds at angle to gusset-plate connections and similar locations where AESS is exposed to weather.
   4. Provide continuous welds of uniform size and profile where AESS is welded.
   5. For Grade AESS 3, welds shall meet AWS D1.1/D1.1M requirements, except that weld spatter exposed to view, if any, shall be removed.
   6. For Grades AESS 3, welds shall be ground smooth/filled.
2.8 SHOP PRIMING

A. Shop prime steel surfaces except the following:
   1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
   2. Surfaces to be field welded.
   3. Surfaces to be high-strength bolted with slip-critical connections.

B. Surface Preparation for Nongalvanized Steel: Clean surfaces to be painted with high-performance coatings. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:
   1. SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."
   2. Prior to blast cleaning:
      a. Grease or oil, if any is present, shall be removed by solvent cleaning to meet the requirements of SSPC-SP 1.
      b. Weld spatter, slivers and similar surface discontinuities shall be removed.
      c. Sharp corners resulting from shearing, flame cutting or grinding shall be eased.

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 2.5 mils. Comply with requirements in SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel," for shop painting. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces. Do not apply primer to surfaces to be embedded in concrete or masonry.
   1. Shop prime uncoated steel with zinc-rich primer.
   2. Shop prime galvanized steel with shop primer for galvanized steel.
   3. Stripe paint corners, crevices, bolts, welds, and sharp edges.
   4. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish from first.

2.9 FINISHES, GENERAL

A. Finish metal fabrications after assembly.

B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

C. Finishing: For architecturally exposed steel items, apply high-performance coatings in accordance with Section 099600 "High-Performance Coatings."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
   1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.
B. Examine AESS for twists, kinks, warping, gouges, and other imperfections before erecting.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep AESS secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

1. If possible, locate welded tabs for attaching temporary bracing and safety cabling where they will be concealed from view in the completed Work.

2. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

A. Plan and execute erection operations in such a manner that allows the architectural appearance of the structure to be maintained.

B. Set AESS accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

1. Slings shall be nylon-type or chains or wire rope with softeners.

2. Care shall be taken to minimize damage to shop paint or coating.

3. When temporary braces or fixtures are required to facilitate erection, care shall be taken to avoid blemishes, holes or unsightly surfaces resulting from the use or removal of such temporary elements.

4. Tack welds not incorporated into final welds shall be ground smooth.

5. Backing and runoff tabs shall be removed and the welds ground smooth.

6. Bolt heads in connections shall be on the same side, as specified, and consistent from one connection to another.

C. Do not use thermal cutting during erection.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Slip critical.

2. Orient bolt heads as indicated on Drawings.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect AESS as specified in Section 051200 "Structural Steel Framing." The testing agency is not responsible for enforcing requirements relating to aesthetic effect.
B. Architect will observe AESS in place to determine acceptability relating to aesthetic effect.

3.6 REPAIRS AND PROTECTION

A. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Grind steel smooth.

B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces. Immediately before Date of Substantial Completion, clean, repair, and repaint scratches, gouges, and other such distortions caused by construction operations.
   1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

C. Touchup Priming and Painting: Cleaning, touchup priming, and touch-up painting are specified in Section 099600 "High-Performance Coatings."

END OF SECTION
SECTION 051250 - BUCKLING RESTRAINED BRACES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes:
   1. Furnishing buckling-restrained braces (BRB's).
   2. Engineering design of BRB's.
   3. Engineering design of BRB connection gussets.

B. Related Sections:
   1. Section 051200 – Structural Steel Framing for erection of BRB's and furnishing of connection hardware for BRB's, including loose plates and fasteners.

1.3 REFERENCES

A. Standards listed below apply where designation is cited in this Section. Where the applicable year of adoption or revision is not listed below, the latest edition applies.

B. ASTM: Standards of the American Society for Testing and Materials (ASTM) apply where designated in this Section. Use applicable year of adoption or revision as published in AISC 360-10.

C. American Institute of Steel Construction’s

D. American Welding Society’s

E. Research Council on Structural Connections’

F. SSPC: Latest edition of Society for Protective Coatings surface preparation and painting specifications apply where cited in this Section.
1.4 DEFINITIONS

A. Buckling-Restrained Brace (BRB): Specialty structural brace element consisting of an axial force resisting steel core encased by a system that prevents buckling of the steel core.

1. Tension and compression shall be resisted entirely by the steel core. The buckling restraining system shall prevent brace buckling and control plate buckling without restraining the steel core from longitudinal extension and shortening.

B. Design Axial Strength, $P_{yc}$: The tensile yield strength of the brace, as designated on the Drawings.

C. Core Area, $A_{sc}$: The Drawings designate a nominal core area to be used when the actual steel yield strength of the core plate is 40 ksi.

D. Stiffness Modification Factor, KF: The stiffness modification factor, as designated on the Drawings.

1.5 DESIGN AND PERFORMANCE REQUIREMENTS

A. Physical Requirements:

1. The area of the steel core, $A_{sc}$, shall be the nominal core area designated on the drawings.

2. The casing shall not exceed the maximum dimensions designated on the Drawings, without written approval of Owner’s Representative.

B. Performance Criteria:

1. Braces shall achieve the stiffness modification factor, KF, designated on sheet S5.30 of the Drawings, within the tolerance designated on the Drawings.

2. Braces shall provide for stable cyclic displacement (lengthening and shortening), corresponding to the acceptance criteria of ANSI/AISC 341, Section K3.

3. The axial brace strain, $2\varepsilon_{bm}$, shall be designated on sheet S5.30 of the Drawings.

C. Design Requirements For Contractor Substitution:

1. Buckling Restrained Braces and end connections are not a deferred approval item. The design requirements are noted in the DSA approved specifications and Drawings. If the Manufacturer chooses to propose substitutions that differs from that used as basis of design and approved by DSA, Manufacturer’s Engineer shall redesign the BRB’s and gusset plates shown on Drawings as required to accommodate connection configuration, subject to review and acceptance of both SEOR and DSA. Acceptance by DSA shall be via an addendum or CCD per DSA IR A-6. Review by SEOR is considered a request for a substitution. As such, SEOR to be compensated for such a review and revisions.

a. Manufacturer’s engineer shall design braces to achieve the performance criteria. Design shall be based on detailed examination and understanding of the results of qualifying cyclic tests and interpolation of results to project conditions.

b. Interpolation of test results for different member sizes shall be justified by rational analysis that demonstrates stress distributions and magnitudes of internal strains that are consistent with or less severe than the tested assemblies and that considers the adverse effects of larger material and variations in material properties. Consider the effect of imposed end rotations.
c. End connections: Manufacturer's Engineer shall design connections to develop the adjusted brace strength in compression, in accordance with provisions of AISC 341 and AISC 360.

1) Adjusted brace strength shall be taken as $1.1\omega\beta*46\cdot A_{sc}$, where $\omega\beta$ are determined at $2\sigma_{cm}$.
2) Bolts in oversize holes shall be designed not to slip prior to brace yield, using $1.1\cdot 46\cdot A_{sc}$ for determination of initial yield. Bolt slip capacity shall be computed using provisions of AISC 360 and a Class A faying surface.

D. Qualification Tests: The design of braces shall be based on results from qualifying cyclic tests in accordance with requirements of ANSI/AISC 341, Section K3.

1.6 SUBMITTALS

B. Certified Manufacturer’s Quality Assurance Plan: Conform to requirements of “Quality Assurance”.

C. Brace Design: Submit drawings and calculations signed by the Manufacturer’s Engineer. Submittal shall occur prior to securing a building permit from DSA. Brace design submittal shall show compliance with the requirements of Article 1.5. If Contractor proposes to deviate from DSA-approved document, Contractor to submit request for substitution via addendum or CCD.

1. Design drawings: Show size and configuration of steel core for full length of BRB. Indicate casing size and length. Provide details of welding.
2. Calculations: Include computations for core area, brace stiffness, casing size, and end connection. Include calculations for gusset plates, where revisions are necessary to accommodate actual end connections.

D. Certified Material Test Reports: Submit to Testing Laboratory for record purposes.

1. Steel.
2. Welding filler material.
3. Coupon tests for core plate steel.

E. Erection Drawings: Show location, size and end connection of BRB’s. Give complete information necessary for fabrication of elements of structural steel frame to receive braces and fabrication of connection plates. Show methods of assembly, including type and size of bolts, hole diameter, and preparation and finish of faying surfaces. Identify tolerances for fabrication and erection.

F. Testing and Inspection Reports: Submit Quality Assurance test and inspection reports to Testing Laboratory for record purposes prior to shipping of braces.

G. LEED Submittals. Submit for record purposes.

1. Recycled Content – Product Data for MR Credits 4.1 and 4.2: Indicate percentages by weight of postconsumer and pre-consumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
2. Low-Emitting Materials – Product Data for EQ Credit 4.2: Provide manufacturers’ printed statement of VOC content, grams per liter, for primer paints.
1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Shall have manufactured and successfully tested braces up to the maximum size and inelastic deformation designated on the Drawings.

B. Design Engineer Qualifications: Structural Engineer, registered in the State of California, that is knowledgeable with the results of cyclic testing of BRB's and experienced in the design of BRB’s based on engineering analysis.
   1. Engineer may be an employee of brace manufacturer.

C. Quality Assurance Plan: Manufacturer shall have a detailed quality assurance plan to evidence that the BRB’s being manufactured are of same quality as those tested.

D. Qualification Testing: Refer to Article 1.5 D, "Qualification Tests" for requirements.
   1. Extrapolation of qualification testing: All deviations from materials, details of fabrication, and quality assurance controls used for the fabrication of tested prototype braces shall be identified by manufacturer and reviewed by design engineer and acceptable to DSA to ensure that production braces meet or exceed the level of quality used in fabrication of prototype braces.

E. Coupon Testing:
   1. Randomly sample and tension test steel plate for brace core in accordance with ASTM E8, plate-type tests.
   2. Take samples from plates at point of brace manufacture.
      a. The axis of the test specimens shall be parallel to the axis of the brace core; no testing transverse to axis of brace core is required.
      b. The end of the test specimen shall be located 6 inches minimum from the end of plate.
      c. The centerline of the test specimen shall be located at the center of steel bars and not closer than 8 inches to a rolled edge of plate.
   3. Test a minimum of 3 specimens for each plate thickness, spaced sufficiently to be representative of the plate employed in the work.
      a. Where more than one heat is employed, test a minimum of 3 specimens from each heat of steel.
      b. Test 2 additional specimens whenever an individual test varies by more than 5 percent from the average of three specimen tests.
   4. Report initial yield, yield at 0.2 percent offset, tensile strength, and elongation for each specimen. Report average yield at 2 percent offset for each sample (of 3, or more, specimen tests).
   5. When the average lower yield strength for a sample falls outside of the specified tolerances designated on the Drawings, the steel shall be rejected for use on the project.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Basis of Design: The bolted lug-type end connection, as manufactured by CoreBrace serves as the basis of design for this project, including gusset plates shown on Drawings.
1. Substitution of other brace end connection types shall be acceptable for this project, subject to limitations specified herein. Brace manufacturer shall provide engineering design of gusset plates to accommodate end connection, subject to review and acceptance by Owner's Representative. Substitution of BRB is subject to DSA review and approval and shall be submitted as an addendum or CCD prepared and approved by the Architect or Record and Structural Engineer of Record. Substitution shall be at no additional cost to Owner, including required modifications to structural steel and re-design fees to Engineer of Record. Additional costs will include fees associated with the Architect, Structural Engineer and DSA-SS/CC.

B. The following manufacturer’s, which have successfully completed qualification testing of braces similar to those required for the project, will be considered acceptable manufacturers, subject to compliance with other requirements of the Contract Documents, including limitations on maximum brace dimensions.
   1. Nippon Steel Engineering USA, Inc.
      a. All bolted end connection shall be acceptable for this project.
      b. Pin end connection shall be acceptable for this project.
   2. CoreBrace™, West Jordan, UT.
      a. All bolted end connection shall be acceptable for this project.
      b. Bolted lug type end connections shall be acceptable for this project.

2.2 MATERIALS

A. Steel Plate for Core: ASTM A36, ASTM A572, Grade 42, or JIS G 3136, Grade SN400 B; except that tensile yield stress at 2 percent offset shall be as designated on the Drawings, as evidenced by coupon testing.

   1. Steel plates 2 inches (50 mm) and thicker shall be supplied with Charpy V-Notch testing in accordance with ASTM A6 Supplementary Requirement S5, or approved equal. The impact test shall meet a minimum average value of 20 ft-lbs absorbed energy at 70 degrees Fahrenheit when tested in accordance with ASTM A673, Frequency P.

B. Casing: ASTM A500, Grade B.

   1. For portions of casing that are exposed to view in completed construction, use only materials that are smooth and free of surface blemishes including pitting, scale, seam marks, roller marks, and rolled trade names. Remove such blemishes by grinding or by filling and grinding, prior to cleaning, treating, and applying surface finishes.

C. Welding Filler Material: Conform to requirements of AWS D1.8, Section 6.3; subject to meeting the CVN toughness and elongation of filler material used for fabrication of tested assemblies.

D. Debonding Agent: Manufacturer’s standard; demonstrated suitable to maintain separation of steel core and grout encasement when subjected to a minimum of 30 cycles of inelastic yielding at 2.0 percent strain; resistant to aging effects for a life cycle of 50 years.

E. Fill Material: Manufacturer’s standard cementitious grout; demonstrated suitable for function as a confining in-fill material by sub-assembly qualification testing.

   1. Grout shall have a minimum compressive strength of 3500 psi at 28 days (ASTM C109).
F. Shop Primer:
   1. Type A: Manufacturer’s standard zinc-rich rust preventative primer, free of lead and chromates.
   2. Type B: SSPC-Paint 20, Type II. Organic, zinc-rich primer; containing less than 0.002% lead. Acceptable Products: Series 90-97 Tneme-Zinc by Tnemec, Carbozinc 621 by Carboline, or approved equal.

2.3 FABRICATION

A. Fabricate steel in accordance with Division 05 Section, "Structural Steel Framing" for members that are part of the Seismic Load Resisting System.

B. Core Plates:
   1. Cut core plates to profile shown on manufacturer’s design drawings. Conform to tolerances of manufacturer’s Quality Assurance Manual, except tolerance on plate width shall not exceed plus or minus 0.2 inches (5 mm).
   2. Axis of core plates shall be parallel to rolling direction of steel plate.
   3. Splices in the steel core shall not be permitted.
   4. Roughness: After cutting, edges of core plates shall have surface finish better than Sample 3, AWS C4.1.
   5. Gouges and notches: Occasional gouges and notches less than 0.2 inches (5 mm) deep in edges of core plates may be repaired by grinding to a smooth transition. The length of transition shall be a minimum of 10 times the depth of gouge. The area shall be inspected by MT after grinding to ensure the entire depth of gouge has been removed. Deeper gouges shall be cause for rejection of piece.
   6. Welding: Continuously weld intersections of cruciform plates. The detailing and finishing of weld terminations shall meet or exceed quality of tested assembly.

C. Holes: Holes for bolted connections shall be drilled and burrs removed. Where designated on Drawings, oversize holes conforming to requirements of ANSI/AISC 360, will be permitted. Holes for pins shall be cut and finished in accordance with manufacturer’s approved procedures.

D. Assembly: Assemble components of the Buckling-Restrained Brace in a manner to ensure proper performance of the brace.
   1. Examine steel core areas for straightness prior to coating with debonding agent.
   2. Provide end-confining plates to ensure confinement of the fill material while allowing for non-restricting movement of the steel core.
      a. Where end confining plates are exposed to view in completed construction, grind flush with face of casing.
   3. For braces exposed-to-weather at building exterior, provide weatherproof gaskets at the ends of the casing that are not subject to deterioration due to sunlight exposure.

E. Finishes: Except as otherwise designated on Drawings, conform to the following finish and painting schedule, in accordance with requirements of Division 05 Section, Structural Steel:
   1. Interior, concealed by finishes or spray fireproofed: SSPC-2 surface preparation; no shop primer paint. At brace manufacturer’s option, concealed surfaces may be shop primed with manufacturer’s standard shop primer, except faying surfaces of bolted connections and surfaces to receive spray fireproofing.
2. Interior, exposed and finish painted: SSPC-6 surface preparation; Type A primer, except at faying surfaces of bolted connections.
3. Exterior, exposed and finish painted: SSPC-6 surface preparation; Type B primer. Faying surfaces of bolted connections shall be prime painted.

2.4 SOURCE QUALITY CONTROL

A. Inspection and testing will be performed in accordance with procedures and administrative requirements of Division 01 Section "Quality Requirements".

B. Testing Laboratory will:
   1. Review manufacturer's quality assurance plan, mill certificates and coupon test report.
   2. Review manufacturer's quality assurance test and inspection reports.

C. Contractor shall:
   1. Notify Owner's Representative no less than 30 days before the start of fabrication of the buckling-restrained braces, to allow Owner's Representative to observe fabrication and assembly process.
   2. Perform testing and inspection in accordance with approved quality assurance plan and requirements of contract documents.

PART 3 - EXECUTION

3.1 ERECTION

A. Braces are erected under Division 05 Section, "Structural Steel Framing".

B. Prior to erection, clean faying surfaces of brace to be in contact with bolted connections to remove temporary coatings applied for transport and surface contaminants.

C. Buckling-restrained braces shall not be field cut or altered. Alterations to structural steel components to receive Buckling-Restrained Braces shall be as permitted by Division 05 Section "Structural Steel Framing".

3.2 PROTECTION

A. Welded, bolted, screwed or shot-in attachments for nonstructural components, erection aids, or temporary construction shall not be placed within the protected zones of braces.
   1. The protected zone includes the steel core of the brace and elements that connect the core to beam and column framing.

B. Welded, bolted, screwed or shot-in attachments shall not be made to casing tube, except with approval of Owner's Representative and brace manufacturer.
3.3 WASTE MANAGEMENT (LEED MR Credit 2.1)

A. Separate steel waste and place in designated areas for recycling.

END OF SECTION
SECTION 053100 - STEEL DECKING

PART 1 - GENERAL

1.1 SUMMARY
   A. This Section includes the following:
      1. Roof deck.
      2. Composite floor deck.
      3. Related accessories.
   B. Related Sections include the following:
      1. Section 031100 - Concrete Forming.
      2. Section 032000 - Concrete Reinforcing.
      3. Section 033000 - Cast-in-place Concrete.
      4. Section 051200 - Structural Steel Framing.
      5. Section 055000 - Metal Fabrications.

1.2 REFERENCES
   A. American Iron and Steel Institute (AISI) - North American Specification for the Design of Cold-Formed Steel Structural Members.
   D. Steel Deck Institute (SDI) – ANSI/SDI NC-2010, Standard for Non-Composite Steel Floor Deck.
   E. American Welding Society (AWS) D1.1 Structural Welding Code - Steel.
   F. American Welding Society (AWS) D1.3 Structural Welding Code - Sheet Steel.

1.3 SUBMITTALS
   A. Shop Drawings: Submit shop drawings in accordance with Section 01 33 00. Show layout and types of deck panels, anchorage details, attachment patterns, field welding requirements, side lap fastenings, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.
   B. Product Data: Submit manufacturer’s specifications/installation instructions for each type of deck, accessory, and product indicated.
      1. Include name of deck manufacturer, type, depth, uncoated steel thickness, and finish.
C. LEED Submittal:
   1. Product Data for Credit MR 4.1 and Credit MR 4.2: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
      a. Include statement indicating costs for each product having recycled content.
   2. Product Data for Credit MR5.1 and Credit MR5.2: Product data for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material.
      a. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. ICC-ES Evaluation Reports: Current evaluation reports by the ICC Evaluation Service indicating that the deck products provided are in compliance with the design requirements stated in the drawing and specification in accordance with the design code for the project.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Provide products from a manufacturer that is a member of the Steel Deck Institute.

B. Installer Qualifications: An experienced installer who has installed steel deck similar in material, design, and extent to that indicated for this Project with a record of successful in-service performance.

D. Fire-Test-Response Characteristics: Where indicated, provide steel deck units identical to those tested for fire resistance per ASTM E119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
   1. Fire-Resistance Ratings: Units shall be rated and listed in Underwriters’ Laboratories “Fire Resistance Index”.
   2. Steel deck units shall be identified with appropriate markings of applicable testing and inspecting agency.

E. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

F. SDI Publications: Fabricate panels to comply with the dimensional parameters and Standard Load Tables defined in SDI "Roof Deck Design Manual" and SDI "Floor Deck Design Manual", or as shown in the drawings.

H. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 50 percent.

I. Local Selection of Steel Products: Provide products for which the portion of material extracted, harvested, or recovered within 500 miles of the project site is not less than 50 percent.
1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Steel Deck Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. ASC Profiles, Inc. per IAPMO UES ER 329 for floor deck and IAPMO UES ER 161 for roof deck.
   2. New Millennium Building Systems, per LLC ICC-ESR 3818.
   3. Verco Manufacturing Co. per IAPMO UES ER 217.

2.2 ROOF DECK

A. Steel Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with ANSI/SDI RD-2010, “Standard for Steel Roof Deck,” and with the following:
   1. Galvanized Steel Sheet: ASTM A653, Structural Steel (SS), Grade 33, G60 zinc coating.
   2. Deck Profile: As indicated on drawings.
   3. Profile Depth: As indicated on drawings.
   4. Design Uncoated-Steel Thickness: As indicated on drawings.
   5. Span Condition: Minimum double span condition unless noted otherwise on drawings.

2.3 COMPOSITE FLOOR DECK

A. Composite Steel Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with ANSI/SDI C-2011, “Standard for Composite Steel Floor Deck – Slabs,” with the minimum section properties indicated, and with the following:
   1. Profile Depth: As indicated on drawings.
   2. Design Uncoated-Steel Thickness: As indicated on drawings.
   3. Span Condition: Minimum double span condition unless noted otherwise on drawings.
   4. Side Laps: As indicated on drawings.

2.4 DECKING TO RECEIVE SFRM

A. Provide decking to receive spray-applied fire resistive materials free of amounts of lubricants, oils, or other contaminants which would impair the adhesion of spray-applied materials.
2.5 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Welding Electrodes: Comply with AWS requirements.

C. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

D. Side-Lap Screw Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 12 minimum diameter unless indicated otherwise on drawings.

E. Provide approved manufacturer's standard side-lap connectors, as evidenced by an active evaluation report, where designated on drawings.

F. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, of same thickness, material and finish as deck; of profile indicated or required for application.

G. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile recommended by SDI for overhang and slab depth.

H. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck, unless otherwise indicated.

I. Flat Sump Plate: Single-piece steel sheet, 14 ga (0.0747 inch) thick, of same material and finish as deck. For drains, cut holes in the field.

J. Galvanizing Repair Paint: SSPC-Paint 20 or DOD-P-21035, with dry film containing a minimum of 94 percent zinc dust by weight. Comply with requirements of ASTM A780.

K. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable SDI specifications, manufacturer's written instructions, and requirements in this Section.

B. Install temporary shoring before placing deck panels, if required by SDI specifications to meet deflection limitations and prevent overloading due to construction loads.

C. Locate deck bundles to prevent overloading of supporting members.
D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.

H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

3.3 ROOF-DECK INSTALLATION

A. Install roof deck as specified below unless noted otherwise on drawings.

B. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1½ inches, and as follows:
   1. Weld Diameter: As indicated on drawings.
   2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds as indicated on drawings.
   3. Weld Spacing in Corner Zones: Space welds 6 inches apart in the roof corners and perimeter zones. Roof corner dimension to be 8'-6” square, and perimeter zone to 8'-6” wide.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:
   1. End Joints: Lapped 2 inches minimum.

D. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and weld flanges to top of deck. Space welds not more than 8 inches apart with at least one weld at each corner.
   1. Install reinforcing channels or zees in ribs to span between supports and weld.

E. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer’s written instructions. Weld to substrate to provide a complete deck installation.
   1. Weld cover plates at changes in direction of roof-deck panels, unless otherwise indicated.

F. Hanger attachments to roof deck shall be permitted only for support of suspended ceilings. Support of light fixtures, ducts, pipes or other utilities from roof deck is not permitted.

3.4 FLOOR-DECK INSTALLATION

A. Install floor deck as specified below unless noted otherwise on drawings.
B. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:
   1. Weld Diameter: As indicated on drawings, nominal.
   2. Welded shear connector may replace deck welds.
   3. Weld Spacing: Space and locate welds as indicated on drawings.

C. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals indicated on drawings.

D. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 2 1/2 inches, with end joints as follows:
   1. End Joints: Butted.

E. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations, unless otherwise indicated.

F. Floor Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of decking. Weld cover plates at changes in direction of floor deck panels, unless otherwise indicated. Cell closures should not run continuous across low deck flutes where interfering with shear connector stud installation in accordance with AWS.

G. Accessories: Cut and fit decking units and accessories around other work projecting through or adjacent to decking according to deck manufacturer’s written instructions. Provide neat, square and trim cuts. Weld to substrate to provide a complete deck installation.

H. Sump Pan and Sump Plates: Place drain sump pans over openings in decking and weld to top of decking. Space welds not more than 8 inches on-center with at least one weld at each corner.

I. Floor openings shown on the structural drawings shall be cut by deck installer and, unless specifically noted otherwise, other openings shall be field cut by trade involved. Holes or openings in deck not shown on drawings shall be approved by Architect/Engineer prior to cutting.

3.5 FIELD QUALITY CONTROL

A. Deck Welds: On a periodic basis, visually inspect size, location, length and burn-through for 100% of puddle welds on metal deck per AWS D1.3, Section 6.

B. Mechanical Fasteners: On a periodic basis, visually inspect specified size, spacing, embedment and location.

C. Remove and replace work that does not comply with specified requirements.

D. Additional inspecting, at Contractor’s expense, will be performed to determine compliance of corrected work with specified requirements.
3.6 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A780 and manufacturer’s written instructions.

B. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

END OF SECTION
SECTION 054000 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Load-bearing wall framing.
   2. Exterior non-load-bearing wall framing.

B. Related Requirements:
   1. Section 092216 "Non-Structural Metal Framing" for interior non-load-bearing, metal-stud framing and ceiling-suspension assemblies.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of cold-formed steel framing product and accessory.

B. Shop Drawings:
   1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
   2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Welding certificates.

C. Product Test Reports: For each listed product, for tests performed by manufacturer and witnessed by a qualified testing agency or by a qualified testing agency.
   1. Steel sheet.
   2. Expansion anchors.
   4. Mechanical fasteners.
   5. Vertical deflection clips.
   6. Horizontal drift deflection clips
   7. Miscellaneous structural clips and accessories.

D. Research Reports:
1. For non-standard cold-formed steel framing, from ICC-ES, or equivalent.
2. For anchors, from ICC-ES, or equivalent.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Member in good standing of the Steel Framing Industry Association (SFIA) or member of a similar organization that provides verifiable code compliance program or shall have a current third-party evaluation report.
   1. Products shall be certified under an independent third party inspection program administered by an agency accredited by IAS to ICC-ES AC98 IAS Accreditation Criteria for Inspection Agencies.

B. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

C. Product Tests: Mill certificates or data from a qualified independent testing agency, or in-house testing with calibrated test equipment indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

D. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Steel Framing Industry Association (SFIA) or by a similar organization that provides verifiable code compliance program or shall have a current third-party evaluation report.

E. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

F. AISI Specifications and Standards: Comply with AISI S100 "North American Specification for the Design of Cold-Formed Steel Structural Members" and AISI S200 "Standard for Cold-Formed Steel Framing - General Provisions."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. CEMCO: California Expanded Metal Products Company.
   2. ClarkDietrich Building Systems, Inc.
   3. MarinoWARE.
   4. SCAFCO Corporation
   5. Steel Network, Inc. (The).
2.2 PERFORMANCE REQUIREMENTS

A. Cold-Formed Steel Framing Design Standards:
   1. Wall Studs: AISI S211.

B. AISI Specifications and Standards:  Unless more stringent requirements are indicated, comply with AISI S100 and AISI S200.

C. Fire-Resistance Ratings:  Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Indicate design designations from UL’s "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.3 COLD-FORMED STEEL FRAMING, GENERAL

A. Recycled Content of Steel Products:  Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Steel Sheet:  ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:
   1. Grade:  Refer to Drawings.
   2. Coating:  G90 or equivalent.

C. Steel Sheet for Vertical Deflection and/or Drift Clips:  ASTM A 653/A 653M, structural steel, zinc coated, of grade and coating as follows:
   1. Grade:  Refer to Drawings.
   2. Coating:  G90.

2.4 LOAD-BEARING WALL FRAMING

A. Steel Studs:  Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: Refer to Drawings.
   2. Flange Width: Refer to Drawings.

B. Steel Track:  Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with straight flanges, and as follows:
   1. Minimum Base-Metal Thickness: Refer to Drawings.
   2. Flange Width: Refer to Drawings.

C. Steel Box or Back-to-Back Headers:  Manufacturer's standard C-shapes used to form header beams, of web depths indicated, unpunched, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: Refer to Drawings.
   2. Flange Width: Refer to Drawings.

D. Steel Single- or Double-L Headers:  Manufacturer's standard L-shapes used to form header beams, of web depths indicated, and as follows:
1. Minimum Base-Metal Thickness: Refer to Drawings.
2. Flange Width: Refer to Drawings.

2.5 EXTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: Refer to Drawings
   2. Flange Width: Refer to Drawings

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: Refer to Drawings.
   2. Flange Width: Refer to Drawings.

C. Vertical Deflection Clips: Manufacturer's standard bypass or head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. ClarkDietrich Building Systems, Inc.
      b. MarinoWARE.
      c. SCAFCO Corporation.
      d. Steel Network, Inc. (The).

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:
   1. Minimum Base-Metal Thickness: Refer to Drawings.
   2. Flange Width: Refer to Drawings.

E. Double Deflection Tracks: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nested inner and outer tracks; unpunched, with unstiffened flanges.
   1. Outer Track: Of web depth to allow free vertical movement of inner track, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:
      a. Minimum Base-Metal Thickness: Refer to Drawings.
      b. Flange Width: Refer to Drawings.
   2. Inner Track: Of web depth indicated, and as follows:
      a. Minimum Base-Metal Thickness: Refer to Drawings
      b. Flange Width: Refer to Drawings.

F. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.
2.6 SOFFIT FRAMING

A. Exterior Soffit Frame: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: Refer to Drawings.
   2. Flange Width: Refer to Drawings.

2.7 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from steel sheet, ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
   1. Supplementary framing.
   2. Bracing, bridging, and solid blocking.
   3. Web stiffeners.
   4. Anchor clips.
   5. End clips.
   6. Foundation clips.
   7. Gusset plates.

2.8 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36/A 36M, zinc coated by hot-dip process according to ASTM A 123/A 123M.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel hex-headed bolts or headless bolts, with encased end threaded of dimensions indicated, and with carbon-steel nuts; and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C.
   1. Product: See Drawings.

C. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488 conducted by a qualified testing agency.
   1. Product: See Drawings.

D. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.
   1. Product: See Drawings.

E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.
1. Head Type: Low-profile head beneath sheathing, manufacturer’s standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

2.9 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: SSPC-Paint 20 or MIL-P-21035B.

B. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, and plasticizing and water-reducing agents, complying with ASTM C 1107/C 1107M, with fluid consistency and 30-minute working time.

C. Shims: Load bearing, high-density multimonomer plastic, and nonleaching; or of cold-formed steel of same grade and coating as framing members supported by shims.

2.10 FABRICATION

A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI’s specifications and standards, manufacturer’s written instructions, and requirements in this Section.

1. Fabricate framing assemblies using jigs or templates.
2. Cut framing members by sawing or shearing; do not torch cut.
3. Fasten cold-formed steel framing members by welding. Wire tying of framing members is not permitted.
   a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
   b. Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by no fewer than three exposed screw threads.
4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.

C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Install load bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4 inch to ensure a uniform bearing surface on supporting concrete or masonry construction.

3.3 INSTALLATION, GENERAL

A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed steel framing according to AISI S200 and to manufacturer's written instructions unless more stringent requirements are indicated.

C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.
   1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.

D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.
   1. Cut framing members by sawing or shearing; do not torch cut.
   2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
      a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
      b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.

E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.

F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

G. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.

H. Install insulation, specified in Section 072100 "Thermal Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

I. Attach exterior sheathing to exterior framing members in accordance with Section 061600 "Sheathing." Confirm gauge of framing with item to be supported according to deflection criteria indicated.
J. Apply continuous air-barrier and rigid insulation, where shown, to sheathing in accordance with Division 07.

K. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

L. Erection Tolerances: Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
   1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.4 LOAD-BEARING WALL INSTALLATION

A. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends, and at spacings as follows:
   1. Anchor Spacing: Refer to Drawings.

B. Squarely seat studs against top and bottom tracks with gap not exceeding of 1/8 inch between the end of wall framing member and the web of track. Fasten both flanges of studs to top and bottom tracks. Space studs as follows:
   1. Stud Spacing: Refer to Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar configurations.

D. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.

E. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure as indicated.

F. Install headers over wall openings wider than stud spacing. Locate headers above openings as indicated. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
   1. Frame wall openings with not less than a double stud at each jamb of frame. Fasten jamb members together to uniformly distribute loads.
   2. Install runner tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.

G. Install supplementary framing, blocking, and bracing in stud framing indicated to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
   1. If type of supplementary support is not indicated, comply with stud manufacturer's written recommendations and industry standards in each case, considering weight or load resulting from item supported.

H. Install horizontal bridging in stud system, spaced vertically as indicated on Drawings. Fasten at each stud intersection.
I. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.

B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Space studs as follows:
   1. Stud Spacing: Refer to Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
   1. Install single deep-leg deflection tracks and anchor to building structure.
   2. Install double deep-leg deflection tracks and anchor outer track to building structure.
   3. Connect vertical deflection clips to bypassing and infill studs and anchor to building structure.
   4. Connect drift clips to cold-formed metal framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows but not more than 48 inches apart. Fasten at each stud intersection.
   1. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 18 inches of single deflection track according to one of the methods below. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
   2. Bridging: One of the following:
      a. Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
      b. Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
      c. Proprietary bridging bars installed according to manufacturer’s written instructions.

F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.6 CEILING/SOFFIT JOIST INSTALLATION

A. Install perimeter joist track sized to match joists. Align and securely anchor or fasten track to supporting structure at corners and ends.

B. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten joists to both flanges of joist track.
   1. Install joists over supporting frame with a minimum end bearing of 1-1/2 inches.
2. Reinforce ends and bearing points of joists with web stiffeners, end clips, joist hangers, steel clip angles, or steel-stud sections as indicated on Shop Drawings.

C. Space joists not more than 2 inches from abutting walls, and as follows:
   1. Joist Spacing: Refer to Drawings.

D. Frame openings with built-up joist headers consisting of joist and joist track, or another combination of connected joists if indicated.

E. Install joist reinforcement at interior supports with single, short length of joist section located directly over interior support, with lapped joists of equal length to joist reinforcement, or as indicated on Shop Drawings.

F. Install bridging at intervals indicated on Drawings. Fasten bridging at each joist intersection according to one of the following:
   1. Bridging: Joist-track solid blocking of width and thickness indicated, secured to joist webs, or
   2. Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and joist-track solid blocking of width and thickness indicated. Fasten flat straps to bottom flange of joists and secure solid blocking to joist webs.
   3. Bridging: Manufacturer’s proprietary installation method.

G. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.

H. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners, to provide a complete and stable joist-framing assembly.

3.7 FIELD QUALITY CONTROL

A. Testing: District will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Field and shop welds will be subject to testing and inspecting.

C. Testing agency will report test results promptly and in writing to Contractor and Architect.

D. Remove and replace work where test results indicate that it does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor’s expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.8 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A 780 and manufacturer’s written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.
SECTION 055000 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Steel framing and supports for countertops.
   2. Steel tube reinforcement for low partitions.
   3. Steel framing and supports for mechanical and electrical equipment.
   4. Steel framing and supports for applications where framing and supports are not specified in other Sections.
   5. Elevator machine beams, hoist beams, and divider beams.
   6. Steel shapes for supporting elevator door sills.
   7. Shelf angles.
   8. Metal ladders.
   10. Miscellaneous steel trim.
   11. Metal bollards.
   13. Loose bearing and leveling plates for applications where they are not specified in other Sections.

B. Products furnished, but not installed, under this Section include the following:
   1. Loose steel lintels.
   2. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.

C. Related Requirements:
   1. Section 033000 "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, slotted-channel inserts, wedge-type inserts, and other items cast into concrete.
   2. Section 051200 "Structural Steel Framing."

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers’ written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
1.4 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Nonslip aggregates and nonslip-aggregate surface finishes.
   2. Metal nosings and treads.
   3. Paint products.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Show fabrication and installation details for metal fabrications.
   1. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.

D. Samples for Verification: For each type and finish of extruded nosing.

1.5 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
   3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

C. Provide the following upon request:
   1. Qualification Data: For professional engineer.
   2. Mill Certificates: Signed by stainless-steel manufacturers, certifying that products furnished comply with requirements.
   3. Welding certificates.
   4. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
   5. Research/Evaluation Reports: For post-installed anchors, from ICC-ES.

1.6 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

D. Stainless-Steel Sheet, Strip, and Plate: ASTM A 240/A 240M or ASTM A 666, Type 316.

E. Stainless-Steel Bars and Shapes: ASTM A 276, Type 316.

F. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.

G. Steel Tubing: ASTM A 500/A 500M, cold-formed steel tubing, Grade B, unless otherwise indicated.

H. Steel Pipe: ASTM A 53/A 53M, Standard Weight (Schedule 40), unless otherwise indicated.

I. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.
   2. Material: Galvanized steel, ASTM A 653/A 653M, commercial steel, Type B, with G90 coating; 0.108-inch nominal thickness.

J. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.

N. Aluminum Castings: ASTM B 26/B 26M, Alloy 443.0-F.

2.2 FASTENERS

A. General: Unless otherwise indicated, provide Type 316 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
   1. Provide stainless-steel fasteners for fastening aluminum.
   2. Provide stainless-steel fasteners for fastening stainless steel.

B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers. Unless otherwise indicated in Drawings, use as specified herein.

C. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 325, Type 3; with hex nuts, ASTM A 563, Grade C; and, where indicated, flat washers. Use where indicated in Drawings.

D. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, ASTM F 593; with hex nuts, ASTM F 594; and, where indicated, flat washers; Alloy [Group 1] [Group 2].

E. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563; and, where indicated, flat washers.
1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.

F. Eyebolts: ASTM A 489.

G. Machine Screws: ASME B18.6.3.

I. Wood Screws: Flat head, ASME B18.6.1.

L. Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.
   1. Product: Refer to Drawings.

M. Cast-in-Place Anchors in Concrete: Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47/A 47M malleable iron or ASTM A 27/A 27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F 2329.
   1. Product: Refer to Drawings.

N. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors.
   1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.
      a. Product: Refer to Drawings.
      a. Product: Refer to Drawings.

O. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, 1-5/8 by 7/8 inches by length indicated with anchor straps or studs not less than 3 inches long at not more than 8 inches o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B 633, Class Fe/Zn 5, as needed for fastening to inserts.

2.3 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with, approved by, and listed with MPI and compatible with topcoat.
   1. Comply with MPI #79.
   2. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
C. Epoxy Zinc-Rich Primer: Complying with, approved by, and listed with MPI and compatible with topcoat.
   1. Comply with MPI #20.

D. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.

E. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

F. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

G. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

H. Concrete: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, concrete with a minimum 28-day compressive strength of 3000 psi.

2.4 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

1. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.

2.5 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.

B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.

C. Galvanize exterior miscellaneous framing and supports. Prime and paint exposed galvanized steel in accordance with Section 099113 "Exterior Painting."

D. Prime and paint interior miscellaneous framing and supports in accordance with Section 099123 "Interior Painting."

2.6 SHELF ANGLES

A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive 3/4-inch bolts, spaced not more than 6 inches from ends and 24 inches o.c., unless otherwise indicated.

1. Provide mitered and welded units at corners.
2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately 2 inches larger than expansion or control joint.

B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.

C. Galvanize shelf angles located in exterior walls.

D. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.

2.7 METAL LADDERS

A. General:

2. For elevator pit ladders, comply with ASME A17.1/CSA B44.

B. Steel Ladders:

1. Space siderails as indicated, but not less than 16 inches apart.
2. Siderails: Continuous, steel flat bars as indicated, with eased edges.
3. Rungs: Steel bars as indicated.
4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
5. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.

6. Support each ladder at top and bottom and not more than 60 inches o.c. with welded or bolted steel brackets.

7. Galvanize ladders, including brackets.

C. For ladders accessed from exterior grade, provide minimum 72-inch-high, hinged security door with padlock hasp at foot of ladder to prevent unauthorized ladder use.

2.8 ELEVATOR PIT SUMP COVERS

A. Fabricate from welded or pressure-locked steel bar grating Limit openings in gratings to no more than 3/4 inch in least dimension.

B. Provide steel angle supports as indicated.

2.9 MISCELLANEOUS STEEL TRIM

A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.

B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.

1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.

C. Galvanize exterior miscellaneous steel trim and finish as directed by Architect.

D. Prime and paint interior miscellaneous steel trim in accordance with Section 099123 "Interior Painting."

2.10 METAL BOLLARDS

A. Fabricate metal bollards from Schedule 40 steel pipe.

1. Cap bollards with 1/4-inch-thick steel plate.
2. Where bollards are indicated to receive controls for door operators, provide cutouts for controls and holes for wire.
3. Where bollards are indicated to receive light fixtures, provide cutouts for fixtures and holes for wire.

B. Fabricate sleeves for bollard anchorage from steel pipe or tubing with 1/4-inch-thick steel plate welded to bottom of sleeve. Make sleeves not less than 8 inches deep and 3/4 inch larger than OD of bollard. Set bollards in sleeves with nonshrink grout.

C. Galvanize, prime, and paint bollards in accordance with Section 099600 "High-Performance Coatings."
2.11 ABRASIVE METAL NOSINGS

A. Extruded Units: Aluminum, with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. American Safety Tread Co., Inc.
   b. Armstrong Products, Inc.
   c. Balco, Inc.
   d. Wooster Products Inc.

2. Provide solid-abrasive-type units without ribs.
3. Nosings: Square-back units, complying with CBC Title 24 Chapter 11B for accessibility, for casting into concrete steps.

B. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.

C. Drill for mechanical anchors and countersink. Locate holes not more than 4 inches from ends and not more than 12 inches o.c., evenly spaced between ends, unless otherwise indicated. Provide closer spacing if recommended by manufacturer.

1. Provide two rows of holes for units more than 5 inches wide, with two holes aligned at ends and intermediate holes staggered.

D. Apply clear lacquer to concealed surfaces of extruded units.

2.12 LOOSE BEARING AND LEVELING PLATES

A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.

B. Galvanize exterior plates.

C. Prime interior plates with primer specified in Section 099113 "Interior Painting."

2.13 LOOSE STEEL LINTELS

A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.

B. Size loose lintels to provide bearing length at each side of openings equal to 1/12 of clear span, but not less than 8 inches unless otherwise indicated.

C. Galvanize, prime, and paint exposed loose steel lintels located in exterior walls.
2.14 STEEL WELD PLATES AND ANGLES
   A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.15 FINISHES, GENERAL
   A. Finish metal fabrications after assembly.
   B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.16 STEEL AND IRON FINISHES
   A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.
      1. Hot-dip galvanize exterior steel fabrications.
      2. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
   B. Preparation for Shop Priming Galvanized Items: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with metallic phosphate process.
   C. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.
      1. Shop prime with universal shop primer unless zinc-rich primer is indicated.
   D. Preparation for Shop Priming: Prepare surfaces to comply with requirements indicated below:
      2. Items Indicated to Receive Primers Specified in Section 09960 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
      3. Other Items: SSPC-SP 3, "Power Tool Cleaning."
   E. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
      1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL
   A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

F. Corrosion Protection: Coat concealed surfaces of aluminum that come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:
   1. Cast Aluminum: Heavy coat of bituminous paint.
   2. Extruded Aluminum: Two coats of clear lacquer.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

3.3 INSTALLING METAL BOLLARDS

A. Fill metal-capped bollards solidly with concrete and allow concrete to cure seven days before installing.

B. Anchor bollards in concrete with pipe sleeves preset and anchored into concrete. Fill annular space around bollard solidly with nonshrink grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately 1/8 inch toward bollard.

C. Place removable bollards over internal sleeves and secure with 3/4-inch machine bolts and nuts. After tightening nuts, drill holes in bolts for inserting padlocks. District furnishes padlocks.

D. Fill bollards solidly with concrete, mounding top surface to shed water.

3.4 INSTALLING NOSINGS

A. Center nosings on tread widths unless otherwise indicated.
B. For nosings embedded in concrete steps or curbs, align nosings flush with riser faces and level with tread surfaces.

3.5 INSTALLING BEARING AND LEVELING PLATES

1. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with nonshrink grout. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.6 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

3.7 FINISH SCHEDULE FOR METAL FABRICATIONS

A. Exterior Steel:

1. Galvanize exterior steel, typical, unless otherwise indicated.
2. Where indicated, shop prime galvanized steel with galvanized steel primer and paint in accordance with Section 099113 "Exterior Painting." Do not prime or paint exterior galvanized steel where indicated.
   a. Galvanize, prime, and paint exterior steel handrails with epoxy paint and polyurethane topcoat in accordance with Section 099600 "High-Performance Coatings."

B. Interior Steel:

1. Where indicated, shop prime exposed steel with universal primer and paint in accordance with Section 099123 "Interior Painting."
   a. Prime and paint interior steel handrails with epoxy paint and polyurethane topcoat in accordance with Section 099600 "High-Performance Coatings."
2. Steel concealed in wall or ceiling assemblies and not exposed may remain unfinished.

END OF SECTION
PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Preassembled service class steel stairs with concrete-filled treads.
   2. Abrasive nosings.

B. Related Requirements:
   1. Section 033000 "Cast-in-Place Concrete" for concrete fill for stair treads and platforms.
   2. Section 055119 "Metal Grating Stairs" for exposed roof mounted metal stairs.
   3. Section 055213 "Pipe and Tube Railings" for steel tube railings attached to metal stairs and for steel tube handrails attached to walls adjacent to metal stairs.
   4. Section 057100 "Decorative Metal Stairs" for Architectural class stairs with precast concrete treads.

1.3 RELATED WORK

A. Refer to Section 055000 "Metal Fabrications" for materials and finishes not noted in this Section that apply to the work of this Section.

1.4 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

C. Coordinate locations of hanger rods and struts with other work so that they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.

1.5 ACTION SUBMITTALS

A. Product Data: For metal pan stairs and the following:
   1. Abrasive nosings.
B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

D. Samples for Verification: For each type and finish of nosing and tread finish.

1.6 INFORMATIONAL SUBMITTALS

A. Evaluation Reports:
   1. For anchors, from ICC-ES, or equivalent.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

B. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Provide the following upon request:
   1. Fabricator qualifications.
   2. Welding certificates.
   3. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance of Stairs: Refer to Drawings. Metal stairs have been designed to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
   1. Uniform Load: 100 lbf/sq. ft.
   2. Concentrated Load: 300 lbf applied on an area of 4 sq. in.
   3. Uniform and concentrated loads are not assumed to act concurrently.
   4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
   5. Deflection of treads, platforms, and framing members limited to L/360 or 1/4 inch, whichever is less.

B. Structural Performance of Railings: Refer to Section 057300 “Decorative Metal Railings,” including attachments to metal stairs.

C. Seismic Performance of Stairs: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
2.2 METAL STAIRS, GENERAL

A. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," Service class, unless more stringent requirements are indicated.

2.3 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

D. Steel Tubing: ASTM A 500 (cold formed), Grade B or ASTM A 513.

E. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.

F. Uncoated, Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, either commercial steel, Type B, or structural steel, Grade 25, unless another grade is required by design loads; exposed.

G. Uncoated, Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, either commercial steel, Type B, or structural steel, Grade 30, unless another grade is required by design loads.

2.4 ABRASIVE NOSINGS

A. Extruded Units: Aluminum units with full-abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Model N2.25E as manufactured by Nystrom, Inc., or comparable product by one of the following, or by Architect approved equal:
   a. American Safety Tread Co., Inc.
   b. Amstep Products.
   c. Armstrong Products, Inc.
   d. Babcock-Davis.
   e. Balco, A CSW Industrials Co.

2. California Title 24 compliant.

4. Anchor: Provide integral extruded anchors for embedding units in concrete-filled steel pan stair treads as standard with manufacturer; minimum 5/8-inch deep.

5. Base Finish: Mill

6. Length: Fabricate units in lengths necessary to accurately fit openings or conditions, less 1/8-inch clearance on each end.

7. Apply clear lacquer to concealed surfaces of extruded units set into concrete.

8. Color: As selected by Architect from manufacturer's complete line of colors.

B. Apply clear lacquer to concealed surfaces of extruded units set into concrete.
2.5 FASTENERS

A. Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel hex-headed bolts or headless bolts, with encased end threaded of dimensions indicated; with carbon-steel nuts, ASTM A 563; and, where indicated, flat hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C.

C. Post-Installed Anchors: Torque-controlled expansion anchors according to ICC-ES AC193, or chemical anchors
   1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.
      a. Product: Refer to Drawings.

2.6 MISCELLANEOUS MATERIALS

A. Shop Primers: Provide rust-inhibitive primers and paints that comply with Section 099123 "Interior Painting."

B. Cast-in-Place Concrete Treads:
   1. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with minimum 28-day compressive strength of 3000 psi and maximum aggregate size of 1/2 inch unless otherwise indicated.
   2. Plain Steel Welded-Wire Reinforcement: ASTM A 1064/A 10645M, galvanized steel, 6 by 6 inches, W1.4 by W1.4, unless otherwise indicated on Drawings.
   3. Reinforcement Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening welded-wire reinforcement in place.
      b. For galvanized reinforcement, use galvanized wire or dielectric-polymer-coated wire bar supports.

2.7 FABRICATION, GENERAL

A. Provide complete stair assemblies, including metal framing, hangers, struts, railings, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
   1. Join components by welding unless otherwise indicated.
   2. Use connections that maintain structural value of joined pieces.

B. Preassembled Stairs: Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

E. Form exposed work with accurate angles and surfaces and straight edges.

F. Weld connections to comply with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. Weld exposed corners and seams continuously unless otherwise indicated.
   5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 3 welds: partially dressed weld with spatter removed.

G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.

H. Embed stair nosings into concrete treads so that top of abrasive resin insert is less than 1/16 inch above top of tread. Comply with CBC Title 24 Chapter 11B requirements for placement.

I. Finish cast-in-place concrete treads as indicated.

2.8 STEEL-FRAMED STAIRS

A. Stair Framing:
   1. Fabricate stringers of steel as indicated.
      a. Provide closures for exposed ends of stringers.
   2. Construct platforms of steel headers and miscellaneous framing members as indicated.
   3. Weld or bolt stringers to headers; weld or bolt framing members to stringers and headers.
      If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
   4. Where stairs are enclosed by gypsum board assemblies, provide hanger rods or struts to support landings from floor construction above or below. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.

B. Metal Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness indicated.
   1. Steel Sheet: Uncoated cold- or hot-rolled steel sheet.
   2. Directly weld metal pans to stringers; locate welds on top of subtreads where they are concealed by concrete fill or attach risers and subtreads to stringers with brackets made of steel angles or bars. Weld brackets to stringers and attach metal pans to brackets by welding, riveting, or bolting. Do not weld risers to stringers.
   3. Attach abrasive nosings to risers.
   4. At Contractor's option, provide stair assemblies with metal pan subtreads filled with reinforced concrete during fabrication.
   5. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.
2.9 STAIR RAILINGS

A. Comply with applicable requirements in Section 055213 "Pipe and Tube Railings."
   1. Connect posts to stair framing by direct welding unless otherwise indicated.

2.10 FINISHES

A. Finish metal stairs after assembly.

B. Preparation for Shop Priming: Prepare uncoated ferrous-metal stair surfaces to comply with the following:
   2. Exposed metal to receive primers specified in Section 099123 "Interior Painting": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

C. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

D. Shop-Primed and Field-Painted Finish: Comply with primers and paints specified in Section 099123 "Interior Painting," as indicated.
   1. Color: As selected by Architect from paint manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLING METAL PAN STAIRS

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.

C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.

D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

G. Place and finish concrete fill for treads and platforms to comply with Section 033000 "Cast-in-Place Concrete."
1. Install abrasive nosings with anchors fully embedded in concrete. Center nosings on tread width.

3.2 INSTALLING RAILINGS

A. Adjust railing systems before anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated or, if not indicated, as required by design loads. Plumb posts in each direction. Secure posts and rail ends to building construction as follows:

1. Anchor posts to steel by welding or bolting to steel supporting members.

3.3 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."

END OF SECTION
SECTION 055119 - METAL GRATING STAIRS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes roof-mounted metal stairs with steel-grating treads and closed metal risers.

B. Related Requirements:
   1. Section 055213 "Pipe and Tube Railings" for steel tube railings attached to metal grating stairs and for steel tube handrails attached to walls adjacent to metal stairs.

1.3 COORDINATION

A. Coordinate roof mounted supports with flashing and roof membrane installation.

B. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.

1.4 ACTION SUBMITTALS

A. Product Data: For metal grating stairs and the following:
   1. Premanufactured tread products.
   2. Paint products.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

B. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Provide the following upon request:
   1. Installer qualifications.
   2. Welding certificates.
3. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance of Stairs: Metal stairs have been designed withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
   1. Uniform Load: 100 lbf/sq. ft.
   2. Concentrated Load: 300 lbf applied on an area of 4 sq. in.
   3. Uniform and concentrated loads need not be assumed to act concurrently.
   4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
   5. Limit deflection of treads, platforms, and framing members to L/360.

B. Seismic Performance of Stairs: Metal stairs withstand the effects of earthquake motions determined according to ASCE/SEI 7.

2.2 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

D. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.

E. Steel Bars for Grating Treads: ASTM A 1011 or ASTM A 1018.

F. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.

2.3 FASTENERS

A. General: Provide zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 12 for exterior use.

B. Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.
2.4 MISCELLANEOUS MATERIALS

A. Shop Primers and Paints: Provide primers and paints that comply with Section 099113 "Exterior Painting" for galvanized steel.
   1. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.

B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

2.5 FABRICATION, GENERAL

A. Provide complete stair assemblies, including metal framing, hangers, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
   1. Join components by welding unless otherwise indicated.
   2. Use connections that maintain structural value of joined pieces.

B. Form exposed work with accurate angles and surfaces and straight edges.

C. Weld connections to comply with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. Weld exposed corners and seams continuously unless otherwise indicated.
   5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 4 welds: good quality, uniform undressed weld with minimal splatter.

D. Fabricate joints that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

2.6 STEEL-FRAMED STAIRS

A. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," Service Class, unless more stringent requirements are indicated.

B. Stair Framing:
   1. Fabricate stringers of steel as indicated.
   2. Construct platforms of steel headers and miscellaneous framing members as needed to comply with performance requirements.
   3. Weld or bolt stringers to headers; weld or bolt framing members to stringers and headers.
   4. Risers: Rolled steel floor plate.
   5. Finish: Galvanized and prepared for field painting.

C. Metal Bar-Grating Stair Treads: Form treads and platforms to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."
   1. ADA-Compliant: Fabricate treads and platforms from welded steel grating with openings in gratings no more than 1/2 inch in least dimension.
2. Basis-of-Design Product: Subject to compliance with requirements, provide Algrip Slip Resistant Metal Bar Grating by Grating Pacific, Inc., or Architect approved equal by one of the listed manufacturers.
   a. Grating shall be type "W" Welded Steel Grating manufactured with A-1011 Carbon Steel. Bar spacing shall be type 11-4 (bearing bars spaced at maximum 11/16 inch on center and cross bars spaced at 4 inches on center).
   b. Bearing bar size: 1-1/2 inch by 3/16 inch up to 54 inch span. Provide 1-3/4 inch by 3/16 inch bar size for spans over 48 inches, or provide intermediate tread support.
   c. Surface: Slip-resistant.

3. Finish: Galvanized and prepared for field finishing.

4. Fabricate grating treads with rolled-steel floor plate nosing and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts as indicated.

5. Fabricate grating platforms with nosing matching that on grating treads. Provide toeplates at open-sided edges of grating platforms. Weld grating to platform framing.

6. Other acceptable manufacturers: Subject to compliance with requirements, provide comparable products by one of the following:
   a. McNichols
   b. Grainger
   c. P&R Metals, Inc.

2.7 STAIR RAILINGS

A. Comply with applicable requirements in Section 055213 "Pipe and Tube Railings."
   1. Connect posts to stair framing by direct welding unless otherwise indicated.

2.8 FINISHES

A. Finish metal stairs after assembly.

B. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.
   1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
   2. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

C. Preparation for Shop Priming: Prepare surfaces to comply with requirements indicated below:
   1. Galvanized Items: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner or metallic phosphate prior to priming.

D. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel."
   1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

E. Repairing Galvanized Surfaces: Clean welds and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.
F. Shop-Primed and Field-Painted Finish: Comply with primer and paints specified in Section 099113 "Exterior Painting," as indicated for steel framing, treads and risers, brackets and supports.

1. Color: As selected by Architect from paint manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.

C. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

D. Attach to roof structural supports as indicated.

E. Provide metal flashing at post base supports feathered into roof membrane and seal roof penetrations watertight.

F. Paint stairs in accordance with Section 09 9113 "Exterior Painting."

3.2 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

END OF SECTION
SECTION 055213 - PIPE AND TUBE RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Steel tube railings and handrails.

B. Related Requirements:
   1. Section 055112 "Metal Pan Stairs" for interior service-class metal stairs on which to mount tube railings.
   2. Section 055119 "Metal Grating Stairs" for exterior metal stairs on which to mount tube railings.
   3. Section 057300 "Decorative Metal Railings" for ornamental railings.

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

1.4 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Railing brackets.
   2. Grout, anchoring cement, and paint products.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

D. Samples: For each type of exposed finish required.
   1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
2. Fittings and brackets.

1.5 INFORMATIONAL SUBMITTALS

A. Evaluation Reports:
   1. For anchors, from ICC-ES, or equivalent.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

B. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Provide the following upon request:
   1. Fabricator qualifications.
   2. Welding certificates.
   3. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.
   4. Product Test Reports: For pipe and tube railings, for tests performed by a qualified testing agency, according to ASTM E 894 and ASTM E 935.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

1.8 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.
   1. Provide post-mounted brackets and type of wall bracket with flange tapped for concealed anchorage to threaded hanger bolt and that provides 1-1/2-inch clearance from inside face of handrail to finished wall surface.
2.2 STEEL AND IRON

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Tubing: ASTM A 500, cold-formed steel tubing, Grade C.

C. Plates, Shapes, and Bars: ASTM A 36.

2.3 FASTENERS

A. General: Provide the following:
   1. Ungalvanized Steel Railings: Plated steel fasteners complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5 for zinc coating.
   2. Hot-Dip Galvanized Railings: Type 304 stainless-steel or hot-dip zinc-coated steel fasteners complying with ASTM A 153/A 153M or ASTM F 2329 for zinc coating.
   3. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

B. Fasteners for Anchoring Railings to Other Construction: Refer to Drawings for type, grade, and class.

C. Fasteners for Interconnecting Railing Components:
   1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless otherwise indicated.
   2. Provide tamper-resistant flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Post-Installed Anchors: Torque-controlled expansion anchors according to ICC-ES AC193, or chemical anchors capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry and 4 times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency. Refer to Drawings for type and evaluation report number.
   1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
      a. Product: Refer to Drawings.
      a. Product: Refer to Drawings.

2.4 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

D. Shop Primers: Provide primers that comply with Section 099600 "High-Performance Coatings."

E. Intermediate Coats and Topcoats: Provide products that comply with Section 099600 "High-Performance Coatings."
   2. Polyurethane Topcoat: Compatible with undercoat.

F. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

G. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.

2.5 FABRICATION

A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage.

B. Shop assemble railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form work true to line and level with accurate angles and surfaces.

E. Fabricate connections that are exposed to weather in a manner that excludes water. Provide weep holes where water may accumulate.

F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.

G. Connections: Fabricate railings with either welded or nonwelded connections unless otherwise indicated.

H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove flux immediately.
   4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.

I. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.

J. Form Changes in Direction as Follows:
   1. By radius bends of radius indicated, or if not indicated by smallest radius without deformation of metal.

K. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

L. Close exposed ends of railing members with prefabricated end fittings.

M. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch or less.

N. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
   1. At brackets and fittings fastened to gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.

O. For interior railing posts set in concrete, provide steel sleeves not less than 6 inches long with inside dimensions not less than 1/2 inch greater than outside dimensions of post, with metal plate forming bottom closure.

2.6 STEEL AND IRON FINISHES

A. Galvanized Railings:
   1. Hot-dip galvanize exterior indicated steel railings, including hardware, after fabrication.
   2. Comply with ASTM A 123/A 123M for hot-dip galvanized railings.
   4. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
   5. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.

C. Preparation for Shop Priming of Metal Railings: Prepare surfaces to comply with requirements indicated below:
   1. Galvanized Items: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner or metallic phosphate prior to priming.
   2. Items indicated to receive primers specified in Section 099600 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
   3. Other Items: SSPC-SP 3, "Power Tool Cleaning."

D. Shop prime steel items not indicated to be galvanized unless they are to be embedded in concrete, masonry, or unless otherwise indicated.

E. Shop prime with primers specified in Section 099600 "High-Performance Coatings."
F. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel."

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

G. Steel Railing and Handrail Finishes: Shop-primed and shop-coated finish complying with coating specified in Section 099600 "High-Performance Coatings," as indicated.

1. Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel." Apply at spreading rates recommended by coating manufacturer.

2. Color: As selected by Architect from coating manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.

B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.

1. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.

2. Set posts plumb within a tolerance of 1/16 inch in 3 feet.

3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.

C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

D. Adjust railings before anchoring to ensure matching alignment at abutting joints.

E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.
B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within 6 inches of post.

3.4 ANCHORING POSTS

A. When installing posts in concrete, use metal sleeves preset and anchored into concrete for installing posts. After posts are inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout or anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.

B. Weld posts to metal stair framing as indicated and cover with oval flanges connected to posts and to metal supporting members as follows:
   1. For steel pipe railings, weld flanges to post and bolt to metal supporting surfaces.

3.5 ATTACHING RAILINGS

A. Attach handrails to wall with wall brackets and to railing posts with post brackets. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

B. Secure wall brackets and railing end flanges to building construction as follows:
   1. For steel-framed partitions, use fasteners as indicated in Drawings installed through flanges of steel framing or through concealed steel reinforcements.

3.6 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 requirements for touching up shop-painted surfaces.
   1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A 780/A 780M.

3.7 PROTECTION

A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

END OF SECTION
SECTIO N 057005 - LANDSCAPE METALWORK

PART 1 - GENERAL

1.1 DESCRIPTION

A. Provide all labor, materials and equipment as required for complete, finished installation of metalwork as shown on the drawings and specified including the following items:
   1. Railings and Guardrails
   2. Miscellaneous landscape metal

B. Metal fabrication includes plates, bars, strips, tubes, pipes and castings made from iron and steel that are not specifically listed herein.

1.2 Related requirements specified elsewhere include:

A. Section 312300, SUBGRADE PREPARATION AND BASE MATERIAL

B. Section 321312, SITE CONCRETE

1.3 REFERENCES AND STANDARDS

A. "Code for Arc and Gas Welding in Building Construction" of American Welding Society, AWSD1.1, latest edition, with current supplements and addenda, is hereby made a part of this Section and miscellaneous metalwork shall conform to the applicable requirements therein, except as otherwise specified herein or shown on the drawings. Nothing contained herein shall be construed as permitting work that is contrary to code requirements or governing rules and regulations.

B. All work shall conform to the American Institute of Steel Construction Specifications for design, erection and fabrication, and acceptable standards of good practice. Finished members shall be true to line and free from twists and bends.

C. SSPC "Steel Structures Painting Manual, Volume 2, Systems and Specifications".

1.4 SUBMITTALS, per Section 013300

A. Product Data: Furnish manufacturer’s literature including paint, grout and recommendations for cleaning.

B. Shop Drawings: Provide shop drawings of all handrails, guardrails, and railings. Shall show dimensions, sizes, thicknesses, gauges, finishes, joining attachments and relationship of work to adjoining construction. Where items must fit and coordinate with finished surfaces and/or constructed spaces, take measurements at site and not from drawings. Where concrete, masonry or other materials must be set to exact locations to receive work, furnish assistance and directions necessary to permit other trades to properly locate their work. Where welded connectors, concrete or masonry inserts are required to receive work, shop drawings shall
show exact locations required, and all such drawings shall be furnished to the trades responsible for installing the connectors or inserts. Catalogue work sheets showing illustrated cuts of item to be furnished, scale details and dimensions may be submitted for standard manufactured items. 

1. Provide templates for anchorage installations by others.

C. Samples: Furnish finish samples of uncoated steel anchor and bolts for farm machinery, etc.

D. Certificates: Submit certification signed by California registered civil or structural engineer indicating compliance with Contract Documents and code requirements where required.

1.5 SYSTEM DESCRIPTION

A. Rail Regulatory Requirements:
   2. Building Code: Comply with requirements of applicable building codes for railing design, except where more restrictive codes are specified.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: Firm with minimum five years successful experience fabricating metal items similar to those required for Project.

PART 2 - MATERIALS

2.1 BASIC MATERIALS AND ACCESSORIES

A. Steel Tubing: ASTM A500 (cold-formed), Minimum Grade B, seamless where exposed.

B. Steel Pipe: ASTM A53, Type S, seamless, Grade A, minimum standard weight, STD or Schedule 40, unless otherwise noted.

D. Bolts: Structural grade steel, ASTM A307-(latest edition), with suitable hex nuts and washers, all galvanized except where noted otherwise.
E. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron ASTM A47 or cast steel ASTM A27. Provide bolts, washers and shims as required, hot-dip galvanized, ASTM A153.

F. Fasteners and Rough Hardware: Type as required for specific usage; provide galvanized zinc-coated fasteners for exterior use or where built into exterior walls.

G. Welding Materials: AWS D1.1, type required for materials being welded.

H. Stainless Steel
1. Plate, Sheet and Strip: ASTM A167, Type 302 or Type 304. Provide mill finish unless otherwise shown.
2. Bars and Shapes: ASTM A276, Type 304. Provide mill finish unless otherwise shown.
3. Tubing: ASTM A269
4. Stainless Steel Railing Finishes: Submit finish sample for approval. Remove tool and die marks and stretch lines or blend into finish. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated free of cross scratches. Run grain with long dimension of each piece.
5. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

I. Castings: Gray iron, ASTM A 48, Class 30; malleable iron, ASTM A 47.

J. Screws: Stainless Steel and Galvanized zinc, electro-plated or brass.

K. Welding Electrodes: As permitted by AWS D1.1

L. Galvanizing:
1. Galvanize fabricated items as shown and specified after fabrication in accordance with ASTM A123-09.
2. Parts shall be made in suitable sections. First clean in a hot pickling bath to remove scale and then rinse clean with clear water. After pickling and washing, dip parts in liquid zinc tank sufficient length of time to heat parts to zinc temperature, then remove and allow to drip and cool; straighten as required.

M. Non-Metallic Shrinkage Resistant Grout: Premixed, nonmetallic, non-corrosive, non-staining, shrinkage resistant product containing selected silica sands, Portland cement, shrinkage compensating agents, plasticizing and water-reducing agents, complying with CE-CRD-C621 and ASTM C1107, free of gas-producing or gas-releasing agents, oxidizing catalysts, inorganic accelerators and chlorides. Provide one of the following:
1. "Five Star Grout" (U.S. Grout Corp.).
2. "Masterflow 713" (Master Builders Co.).
3. "Crystex" (L&M Construction Chemicals, Inc.).

N. Fasteners and Anchorage Devices: Provide fasteners complying with the requirements of Industrial Fasteners Institute standards. Type, grade, class and style best suited for the respective purpose. Use countersunk flat-head Phillips type machine screws for exposed fasteners, except where Allen head screws are required. Use galvanized steel or stainless steel fasteners for exterior construction and for fastening components fabricated of galvanized steel except where specified otherwise. Fasteners exposed in finish surfaces to match finish of adjacent surfaces.

O. Component Connections: Refer to Drawings.
P. Material Selection: Select materials for straightness, free of defects and irregularities.
   1. Exposed-to-view surfaces exhibiting pitting, seam marks, roller marks, "oil canning", stains, discolorations, and imperfections on finished units are not acceptable.

Q. Joints: Make exposed joints flush butt type, hairline joints where mechanically fastened; provide concealed connection devices with hidden fasteners.
   1. Fabricate continuous items with joints neatly fitted and secured.
   2. Ease exposed edges to approximate 1/32" uniform radius.
   3. Fabricate joints exposed to weather in manner to exclude water or provide weep holes where water could accumulate.

R. Welding: Comply with AWS for recommended practices in welding each type of material; provide welds behind finished surfaces without distortion or discoloration on exposed side; dress exposed and contact surfaces.

S. Exposed Mechanical Fastenings: Flush countersunk fasteners unobtrusively located, consistent with design of structure.

T. Assemblage: fit and shop assemble in largest practical sections for site delivery.

U. Dissimilar Materials: Separate dissimilar materials with bituminous paint where concealed, with preformed separators, or similar method to prevent corrosion.

2.2 SPECIALLY FABRICATED PRODUCTS

A. Railings and Handrails: Make all bar railings of milled steel unless noted otherwise; all connections welded. Where pipe railing are required, make from (1-1/2) outside diameter seamless steel pipe unless noted otherwise. Fabricate in largest sections feasible; all shop joints welded; all field joints with concealed sleeves and pins.
   1. 1.5" O.D. Stainless Steel Tube HSS1 1/2x0.12
   2. 1.5" I.D (1.9" O.D) Stainless Steel Extra Strong Pipe

B. Railings and Handrails Design: Continuous railings conforming to applicable code and design requirements. Construct to support a concentrated load of 250 lbs. Applied at any point and in any direction and for a uniform load of 50 lbs. Per foot applied in any direction. The concentrated and uniform loading conditions shall not be applied simultaneously.

2.3 SHOP PAINTING

A. General:
   1. Shop paint miscellaneous metal work, except members or portions of members to be embedded in concrete or masonry, surfaces and edges to be field welded unless otherwise specified.
   2. Remove oil, grease and similar contaminants in accordance with SSPC SP-1 "Solvent Cleaning", prior to any additional surface preparation specified.
   3. Clean and prepare metal surfaces before applying shop coat. Remove rust and mill scale in accordance with SSPC SP-3 "Power Tool Cleaning".
   4. Immediately after surface preparation, apply primer in accordance with manufacturer's instructions. Use painting methods which will result in full coverage and dry film thickness specified.
5. Apply one shop coat of primer to fabricated metal items, except apply 2 coats of primer to surfaces inaccessible after assembly or erection. In addition, apply one shop coat of finish paint to entire surfaces of exterior loose lintels, shelf and relieving angles, dunnage and other items as noted or specified. Change color of second or finish coat to distinguish it from the first coat.

6. Separate dissimilar metals with one coat of dielectric separator. Do not extend coating onto exposed or finished surfaces.

7. Application: Do not paint when ambient temperature is below 40°F. Paint in dry weather or under cover; paint over dry rust-free surfaces. Stir paint and keep at uniform consistency during application. Apply paint by brush or spray per manufacturer's directions to a dry film thickness of not less than 1.5 mils (approximately 370-375 SF of surface per gallon); do not thin paint in excess of manufacturer's recommendations. Allow paint to dry before handling or shipment.

B. Fully Concealed Items:
1. Clean steel work by "Solvent Cleaning" method specified in SSPC-SP 1, followed by "Hand Tool Cleaning" to remove loose mill scale and rust by methods specified in SSPC-SP 2.
2. Apply ferrous metal primer immediately after cleaning to uniform dry film thickness of 2.0 mils.
3. Apply second coat of same primer and same thickness on concealed work which will be built into below grade work, or will be concealed in areas designated high humidity areas.

C. Exposed Exterior Items:
1. Apply the following cleaning, treatment and painting to exterior work which will be fully exposed or only partially exposed, and to exposed interior work in areas designated as high humidity areas.
2. Clean by "Solvent Cleaning" method specified in SSPC-SP 1, followed by "Power Tool Cleaning" to remove loose mill scale and rust by methods specified in SSPC-SP 3, followed by "Pickling" to remove remaining mill scale and rust by methods specified in SSPC-SP 8. Power tool cleaning and pickling may be omitted from work fabricated from cold-rolled or cold-finished stock, and from castings, provided surfaces are not heavily rusted.
3. Apply pretreatment as recommended by ferrous metal primer manufacturer.
4. Apply prime coat of ferrous metal primer immediately after pretreatment to uniform dry film thickness.

D. Preparation of Galvanized Metal Non-Ferrous Metal
1. Surface preparation:
   a. Existing galvanized metal: SSPC-SP1 Solvent Clean to remove visible and soluble surface contaminants.
   b. New galvanized metal shall be prepared per SSPC-SP16 Brush-Off Blast Cleaning of Non-Ferrous Metals to create a dense, uniform and angular surface profile of 1.0 to 1.5 mils. When abrasive blasting is not practical use power tools that create a surface profile (1.0 to 1.5 mils) and do not burnish the surface. The purpose is not to remove zinc but to roughen the surface. If zinc is removed to expose substrate, bare substrate must be primed with a zinc-rich primer such as Tnemec Series 94-H2O | Hydro-Zinc.
2. Surface clean cuts and welds to bright metal.
3. Prime Coat/Tie-Coat: Series 66HS Hi-Build Epoxoline; 2.0 – 3.0 mils DFT
4. Color Finish: Series 1075 Endura-Shield II; 2.0 – 3.0 mils DFT
5. Total DFT: 4.0 – 6.0 mils.

E. Preparation of Ferrous Metal
1. Surface preparation: SSPC-SP6/NACE No. 3 commercial blast clean to create a dense, uniform and angular anchor profile of 2.0 mils minimum.
2. Prime Coat: Series 94-H20 Hydro-Zine or Series 90-97 Tneme Zinc (meets Class B Slip for critical bolted connections); 2.5 – 3.5 mils DFT.
3. Field Touch-Up Primer: Series 94-H20 Hydro-Zinc; 2.5 – 3.5 mils DFT.
4. Striping Existing Metal: Series 66HS Hi-Build Epoxoline brush applied to all bare and corroded surfaces, sharp edges, welds, nuts and bolts per SSPC-PA 1, 6.6 Striping, 7.4.6 Application Method.
5. Intermediate Coat: Series 66HS Hi-Build Epoxoline; 4.0- 6.0 mils DFT.
6. Color Finish: Series 1075 Endura-Shield II; 3.0 – 5.0 mils DFT.
7. Total DFT: 9.5 – 14.5

PART 3 - EXECUTION

3.1 CONDITION OF SURFACES: Inspect all surfaces to receive site metal work and report all defects which would interfere with this installation. Starting work implies acceptance of surfaces as satisfactory.

3.2 FIELD MEASUREMENTS: Take field measurements prior to preparation of shop drawings and fabrication, where possible; do not delay job progress; allow for trimming and fitting where necessary.

3.3 WORKMANSHIP

A. Verify all measurements at job. Coordinate all metalwork with adjoining work for details of attachments, fittings, etc. Do all cutting, shearing, drilling, punching, threading, tapping, etc., required for site metalwork or for attachment of adjacent work. Drill or punch holes; do not use cutting torch. Shearing and punching shall leave true lines and surfaces. Obtain Owner’s Representative’s review prior to site cutting or making adjustments which are not part of scheduled work. Perform necessary cutting and altering for installation and coordination with other work.

B. Conceal all fastenings where feasible. Thickness of metal and details of assembly and supports shall give ample strength and stiffness. Form joints exposed to weather to exclude water.

C. Make all permanent connections in ferrous metal surfaces using welds where at all possible; do not use bolts or screws where they can be avoided.

D. Provide all lugs, clips, anchors, miscellaneous fastenings necessary for complete assembly and installation.

E. Set all work plumb, true, rigid, neatly trimmed out, accurately fitted and free from distortions or defects detrimental to appearance or performance. Miter corners and angles of exposed moldings and frames unless otherwise noted.

F. Set railings where shown set in sleeves or cored with quick-setting non-shrink anchor cement. Size sleeves for approximately 1/4" clearance all around.
G. Where items must be incorporated or built into adjacent work, deliver to trade responsible for such work in sufficient time that progress of work is not delayed. Be responsible for proper location of such items.

H. Make provisions for erection stresses by temporary bracing; Keep work in alignment.

I. Install ornamental metal items in accordance with manufacturer’s recommendations, installation instructions, and approved shop drawings.

J. Install items plumb, true and in correct relation to adjacent work, free from distortion or defects detrimental to appearance and performance.

K. Prior to securing continuous items, adjust to ensure proper matching at butt joints and correct alignment throughout their length.

L. Tolerances: Accurately align and locate components to required lines and levels to conform to following tolerances:
   1. Plumb: 1/8” in 10'-0”; ¼” in 40'-0”; non-cumulative.
   2. Level: 1/8” in 20'-0”; ¼” in 40'-0”; non-cumulative.
   3. Location: 3/8” maximum deviation from measured theoretical location (any member and location).

3.4 WELDING:

A. Perform all welding in accordance with AWS Code D1.1. Welds shall be made only by operators experienced in performing the type of work indicated. Welds normally exposed to view in the finished work shall be uniformly made and shall be ground smooth. Where welding is done in proximity to glass or finished surfaces, such surfaces shall be protected from damage due to weld sparks, spatter, or tramp metal.

B. Field Welding: Comply with AWS Welding Code for procedures related to field welding as related to appearance and quality of welds made and for methods used in correcting welding work. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals. Obtain fusion without undercut or overlap. Remove welding flux immediately. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.

3.5 BOLTED, SCREWED AND RIVETED CONNECTIONS

A. In general, use bolts for field connections only and then only as detailed. Provide washers under all heads and nuts bearing on wood. Draw all nuts tight and nick threads of permanent connections to prevent loosening. Use beveled washers where bearing is on sloped surfaces.

B. Where screws must be used for permanent connections in ferrous metal, use flat-head-type, countersunk, with screw slots filled and finished smooth and flush.

C. Where rivets are used, they shall be machine-driven, tight, heads centered, countersunk, and finished flush and smooth.
3.6 SURFACE TREATMENT AND PROTECTIVE COATINGS

A. Cleaning: Thoroughly clean all mill scale, rust, dirt, grease and other foreign matter from ferrous metal prior to any galvanizing, hot phosphate treatment or painting. Conditions which are too severe to be removed by hand cleaning methods shall be cleaned per SSPC "Surface Preparation Specifications," "Solvent Cleaning, SSPC-SP-1"; "Power Tool Cleaning, SSPC-SP-3"; or "Brush-Off Blast Cleaning, SSPC-SP 7"; as required.

B. Exterior Ferrous Metal: Welds, burrs, and rough surfaces ground smooth and completed assembly cleaned, hot phosphate treated. Hot phosphate treatment not required on items which are not exposed in the finish work or on those items where size prohibits such treatment. Indicate on shop drawings where treatment is proposed to be omitted.

3.7 PAINTING

A. Prime Coat: After material has been properly cleaned and treated, apply two shop prime coats, each of a different color, to all surfaces except those encased in concrete or masonry. Apply all paint per manufacturer's directions. Spot paint all abrasions and field connections after assembly. Shop coats shall be dry prior to shipment to job site.

B. Finish Coats: Apply one coat per manufacturer's instructions. May be shop-applied where applicable.

3.8 GALVANIZING

A. Galvanize fabricated items after fabrication in accordance with ASTM A123-66.

B. Parts shall be made in suitable sections. First clean in a hot pickling bath to remove all scale and then rinse clean with clear water. After pickling and washing, dip parts in liquid zinc tank sufficient length of time to heat parts to zinc temperature, then remove and allow to drip and cool; straighten as required.

3.9 INSTALLATION

A. Coordinate and furnish anchorages, setting drawings, diagrams, templates, instructions and directions for installation of anchorages, including concrete inserts, sleeves, anchor bolts and other miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to the project site. Deliver items which are to be built into the work of other Sections in time so as not to delay the progress of the Work.

B. Protect finished surfaces against damage during construction and remove protection at time of substantial completion.

C. Railings and Guardrails:

1. Anchor posts of railings into concrete by means of pipe sleeves preset and anchored into concrete. Set sleeves in concrete with tops flush with finish surface elevations and protect sleeves from water and concrete entry. After posts have been inserted into sleeves, solidly fill annular space between post and sleeve with non-shrink non-metallic grout. Cover anchorage joint with a round steel flange welded to post after placement of anchoring material.
2. Anchor posts to steel members with steel oval flanges, angle type or floor type as required by conditions, welded to posts and bolted to steel supporting members.

3. Mount handrails only on completed walls. Do not support handrails temporarily by any means not satisfying structural performance requirements. Mount handrails only on gypsum board assemblies reinforced to receive anchors. Adjust railings prior to anchoring to ensure matching alignment at abutting joints. Locate posts at spacing indicated, or if not indicated, at equal intervals as required by design loadings.

4. Secure handrails to wall with wall brackets and end fittings. Provide brackets of design shown, with flanges tapped for concealed anchorage and with not less than 1-1/2 in. clearance from inside face of handrail and finished wall surface. Located brackets as indicated, or if not indicated, at equal spacings as required by design loads.

D. Loose Plates: Prior to setting loose bearing and setting plates, clean concrete and masonry bearing surfaces of any bond reducing materials and roughen to improve bond to surfaces. Clean bottom surface of plates. Set on wedges or other adjustable devices. After members have been positioned and plumbed, tighten anchor bolts. do not remove wedges or shims, but if protruding, cut off flush with the edge of the plate before packing with grout. Pack grout solidly between bearing surfaces and plates to ensure no voids remain.

E. Immediately after erection, clean field welds, bolted connections, marred and abraded surfaces. Paint and touch-up paint with the specified paint system. Touch up galvanized surfaces in accordance with ASTM A780.

F. Replace items damaged in course of construction.

3.10 PROTECTION AND CLEANING, per Section 017400

A. Remove all soil and foreign matter from finished surface and apply such protective measures as may be required to prevent damage or discoloration of any kind until acceptance of project.

END OF SECTION
SECTION 057100 - DECORATIVE METAL STAIRS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes steel-framed decorative metal stairs with precast concrete treads.

B. Related Requirements:
   1. Section 051213 "Architecturally Exposed Structural Steel (AESS)" for finish requirements of decorative metal stairs.
   2. Section 055000 "Metal Fabrications" for miscellaneous steel fabrications and other metal items required for decorative metal stair installation.
   3. Section 057300 "Decorative Metal Railings" for metal railings attached to decorative metal stairs.

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages for metal stairs. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.4 ACTION SUBMITTALS

A. Product Data: For metal stairs and the following:
   1. Abrasive nosings.
   2. Paint products.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

D. Samples for Initial Selection:
   1. For precast tread finish and color, and slip-resistant coatings, provide manufacturer’s available options.

E. Samples for Verification:
1. For finish metal work complying with AESS requirements for steel plate and welded joints; 12 inch long sample of finished pipe with welded joint in each AESS finish level required.
2. Sample: For precast concrete finish.
3. Sample: Full size sample of abrasive metal nosing by 6 inches long.

1.5 INFORMATIONAL SUBMITTALS

A. Evaluation Reports:
1. For anchors, from ICC-ES, or equivalent.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.
B. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
C. Provide the following upon request:
1. Fabricator qualifications.
2. Welding certificates.
3. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance of Stairs: Refer to Drawings. Metal stairs have been designed to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Uniform Load: 100 lbf/sq. ft.
2. Concentrated Load: 300 lbf applied on an area of 4 sq. in.
3. Uniform and concentrated loads are not assumed to act concurrently.
4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
5. Deflection of treads, platforms, and framing members limited to L/360 or 1/4 inch, whichever is less.

B. Structural Performance of Railings: Refer to Section 057300 "Decorative Metal Railings," including attachments to metal stairs.

C. Seismic Performance of Stairs: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
2.2 METAL STAIRS, GENERAL

A. NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," Architectural class, unless more stringent requirements are indicated.

2.3 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

D. Uncoated, Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, either commercial steel, Type B, or structural steel, Grade 25, unless another grade is required by design loads; exposed.

2.4 FASTENERS

A. Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel hex-headed bolts or headless bolts, with encased end threaded of dimensions indicated; with carbon-steel nuts, ASTM A 563; and, where indicated, flat hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C.

C. Post-Installed Anchors: Torque-controlled expansion anchors according to ICC-ES AC193, or chemical anchors

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.
   a. Product: Refer to Drawings.

2.5 MISCELLANEOUS MATERIALS

A. Shop Primers: Provide rust-inhibitive primers that comply with Section 099600 "High-Performance Coatings."

B. Intermediate Coats and Topcoats: Provide products that comply with Section 099600 "High-Performance Coatings."

2. Polyurethane Topcoat: Compatible with undercoat.
2.6 PRECAST CONCRETE TREADS

A. Concrete Materials and Properties: Comply with requirements in Section 033000 "Cast-in-Place Concrete" for normal-weight, ready-mixed concrete with a minimum 28-day compressive strength of 5000 psi and a total air content of not less than 4 percent or more than 6 percent. Provide concrete inserts for inverted concealed bolted attachment to subtreads.
   1. Finish: As selected by Architect from precast manufacturer's available finishes and colors.
   2. Slip-Resistant Coating: Manufacturer's standard micro-grit; aluminum oxide or equivalent.

B. Reinforcement: Galvanized, welded wire reinforcement, 2 by 2 inches by 0.062-inch- diameter wire; comply with ASTM A 185/A 185M and ASTM A 82/A 82M, except for minimum wire size.

C. Abrasive Nosings: Extruded aluminum units with full-abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Model N2.25E as manufactured by Nystrom, Inc., or comparable product by one of the following, or by Architect approved equal:
      a. American Safety Tread Co., Inc.
      b. Amstep Products.
      c. Armstrong Products, Inc.
      d. Babcock-Davis
      e. Balco, A CSW Industrials Co.
   2. California Title 24 compliant.
   4. Anchor: Provide integral extruded anchors for embedding units in concrete-filled steel pan stair treads as standard with manufacturer; minimum 5/8-inch deep.
   5. Base Finish: Mill
   6. Length: Fabricate units in lengths necessary to accurately fit openings or conditions, less 1/8-inch clearance on each end.
   7. Apply clear lacquer to concealed surfaces of extruded units set into concrete.
   8. Color: As selected by Architect from manufacturer's complete line of colors.

2.7 FABRICATION, GENERAL

A. Provide complete stair assemblies, including metal framing, hangers, struts, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
   1. Join components by welding unless otherwise indicated.
   2. Use connections that maintain structural value of joined pieces.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges. Remove sharp or rough areas on exposed surfaces. Remove weld splatter.
   1. Refer to Section 051213 "Architecturally Exposed Structural Steel (AESS)" for finishing of steel stair components. Provide grading category of Grade AESS 3, or better.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.
E. Weld connections to comply with the following:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. Weld exposed corners and seams continuously unless otherwise indicated.
   5. At exposed connections, finish exposed welds to comply with NOMMA’s "Voluntary Joint Finish Standards" for Type 1 welds: no evidence of a welded joint.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated. Locate joints where least conspicuous.

G. Embed stair nosings into precast concrete treads so that top of abrasive resin insert is less than 1/16 inch above top of tread. Comply with CBC Title 24 Chapter 11B requirements for placement.

H. Finish precast concrete treads as indicated.

2.8 STEEL-FRAMED STAIRS

A. Stair Framing:
   1. Fabricate stringers of steel tubes, plates or channels indicated.
      a. Provide closures for exposed ends of channel tube stringers.
   2. Construct platforms of steel tubes, plates or channels with steel headers and miscellaneous framing members as indicated.
   3. Weld stringers to headers; weld framing members to stringers and headers. [If using bolts, fabricate and join so bolts are not exposed on finished surfaces.]

B. Subtreads, Risers, and Subplatforms:
   1. Fabricate subtreads and subplatforms of steel shapes indicated.
   2. Weld subtreads to stringers. Locate welds on top of subtreads where they will be concealed by finished treads.
   3. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.
      a. Smooth Soffit Construction: Construct subplatforms with flat metal under surfaces to produce smooth soffits.

2.9 STAIR RAILINGS

A. Comply with applicable requirements in Section 057300 "Decorative Metal Railings."
   1. Connect posts to stair framing by direct welding unless otherwise indicated.

2.10 FINISHES

A. Preparing Nongalvanized Decorative Metal Stairs for Shop Priming:
   1. Prepare uncoated ferrous-metal surfaces to comply with AESS requirements indicated but not less than the following:

2. Prepare concealed uncoated ferrous-metal surfaces to comply with SSPC-SP 3, "Power Tool Cleaning."

B. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete.

1. Shop prime uncoated metal stairs with rust-inhibitive primers specified in Section 099600 "High-Performance Coatings."

1. Color: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.

C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.

D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.

E. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

F. Field Welding: Comply with requirements for welding in "Fabrication, General" Article.

G. Attach precast concrete treads to subtread plates. Adjust levelness for deviation not more than 1/16 inch per 5 feet.
3.2 ADJUSTING AND CLEANING

A. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 099600 "High-Performance Coatings."

END OF SECTION
SECTION 057300 - DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Steel railings with stainless-steel cable infill and fittings.
   2. Stainless steel tube handrails and brackets.

B. Related Requirements:
   1. Section 057100 "Decorative Metal Stairs" for ornamental stairs on which to mount decorative railings.
   2. Section 092216 "Non-Structural Metal Framing" for metal backing for anchoring railings.
   3. Section 099600 "High-Performance Coatings" for finish of steel portions of railing system.

1.3 DEFINITIONS

A. Railings: Guards, handrails, and similar devices used for protection of occupants at open-sided floor areas and for pedestrian guidance and support, visual separation, or wall protection.

1.4 COORDINATION AND SCHEDULING

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers’ written instructions to ensure that shop primers and topcoats are compatible.

B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.

C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not meet structural performance requirements.

1.5 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Manufacturer's product lines of railings, handrails, brackets, cable and fittings assembled from standard components.
   2. Grout, anchoring cement, and paint products.
B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Include plans, elevations, sections, and attachment details.

D. Samples for Initial Selection:
   1. For handrail brackets.
   2. For cable fittings.

E. Samples for Verification: For each type of exposed finish required.
   1. Minimum 12 inch length sections of each distinctly different linear railing member, including handrails, top rails, and posts.
   2. Minimum 12 inch length of cable and each fitting and accessory proposed for the Project. Submit items in specified finish.
   3. Handrail brackets.
   4. Welded connections.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Instructions:
   1. Manufacturer's instructions for periodic checking and adjustment of cables to maintain uniform cable tension.
   2. Manufacturer's recommendation for periodic cleaning to remove accumulated dirt, debris, and stains.

1.7 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

B. Provide the following upon request:
   1. Qualification Data: For professional engineer.
   2. Mill Certificates: Signed by manufacturers of stainless-steel products certifying that products furnished comply with requirements.
   3. Welding certificates.
   4. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, according to ASTM E 894 and ASTM E 935.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
   1. Build mockups as shown on Drawings.
   2. Build mockups for each form and finish of railing consisting of two posts, top rail, cable infill area, and anchorage system components that are full height and are not less than 48 inches in length.
   3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
1.8 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.9 WARRANTY

A. Special Warranty: Stainless steel cables and connectors against defects in materials and workmanship.
   1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: In engineering railings to withstand structural loads indicated, allowable design working stresses of railing materials have been based on not less than the following:
   1. Stainless Steel: 60 percent of minimum yield strength.
   2. Steel: 72 percent of minimum yield strength.

B. Structural Performance: Railings, including attachment to building construction, have been designed to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
   1. Railing frame components and cable hardware designed to withstand loads encountered without excessive deflection or distortion when cables are tensioned to required amounts to conform to building codes.
   2. Cable Railing System, Handrails and Top Rails of Guards:
      a. Uniform load of 50 lb/ft. applied in any direction.
      b. Concentrated load of 200 lb (0.89 kN) applied in any direction.
      c. Uniform and concentrated loads need not be assumed to act concurrently.
   3. Cable Infill:
      a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft. over gross area of cable railing system.
      b. Infill load and other loads need not be assumed to act concurrently.

2.2 MANUFACTURERS

A. Source Limitations: Obtain each type of railing, cables, fittings, and accessories from single source from single manufacturer.
B. Product Options: Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods, including structural analysis, preconstruction testing, field testing, and in-service performance.

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

2.3 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.

1. Provide cast-or machined-metal brackets with flange tapped for concealed anchorage to threaded hanger bolt at wall and threaded stud at post as indicated.

C. Handrail Brackets: Final selection by Architect. Subject to compliance with requirements and as approved by Architect, provide Malibu Series Type 316 stainless steel wall-mounted and post-mounted brackets as manufactured by C.R Laurence, Inc., or Architect approved equal.

2.4 STAINLESS STEEL

A. Tubing: ASTM A 554, Grade MT 316.

B. Wire Rope and Fittings:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. C. Sherman Johnson, Co., Inc.
   b. Cable Connection (The).
   c. Feeney, Inc.
   d. Hayn Enterprises, LLC.

2. Wire Rope: 3/16 inch diameter minimum, commercial, dry grade; 1-by-19 wire rope made from polished stainless steel wire complying with ASTM A 492, Type 316.
   a. Breaking Strength: Not less than 4700 lbs.

3. Wire-Rope Fittings: Swageless quick connect, concealed threads; ball terminals, ball end turnbuckles, tensioning adjusters, fixed end studs, and other hardware, fabricated from Type 316 tumbled stainless steel, and with capability to sustain, without failure, a load equal to minimum breaking strength of wire rope with which they are used as recommended by manufacturer for installation conditions.

2.5 STEEL AND IRON

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
B. Plates, Shapes, and Bars: ASTM A 36/A 36M, with minimum yield stress of 36 ksi.

2.6 FASTENERS

A. Fastener Materials: Unless otherwise indicated, provide the following:
   1. Stainless-Steel Components: Type 316 stainless-steel fasteners.
   2. Uncoated Steel Components: Type 316 stainless-steel fasteners where exposed.
   3. Dissimilar Metals: Type 316 stainless-steel fasteners.

B. Fasteners for Anchoring to Other Construction: Provide fasteners of type, grade, and class indicated.

C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work unless exposed fasteners are unavoidable.
   1. Provide tamper-resistant flat-head machine screws for exposed fasteners unless otherwise indicated.

2.7 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Shop Primers: Provide primers that comply with Section 099600 "High-Performance Coatings."

C. Intermediate Coats and Topcoats for Ferrous Metal: Provide products that comply with Section 099600 "High-Performance Coatings."
   2. Polyurethane Topcoat: Compatible with undercoat.

2.8 FABRICATION

A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage.

B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Make up wire-rope assemblies in the shop to field-measured dimensions with fittings machine swaged. Minimize amount of turnbuckle take-up used for dimensional adjustment so maximum amount is available for tensioning wire ropes. Tag wire-rope assemblies and fittings to identify installation locations and orientations for coordinated installation.

D. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges. Remove sharp or rough areas on exposed surfaces. Remove weld splatter.
   1. Refer to Section 051213 "Architecturally Exposed Structural Steel (AESS)" for finishing of steel stair components. Provide grading category of Grade AESS 3, or better.

E. Form work true to line and level with accurate angles and surfaces.
F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.

G. Connections: Fabricate railings with welded connections unless otherwise indicated.

H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove flux immediately.
   4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds; no evidence of a welded joint.

I. Form changes in handrail direction as follows:
   1. By radius bends of radius indicated, or if not indicated, to smallest radius allowable without deformation of metal.

J. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

K. Close exposed ends of hollow railing members with prefabricated end fittings.

L. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch or less.

M. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
   1. At brackets and fittings fastened to gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and to prevent bracket or fitting rotation and crushing of substrate.

2.9 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

C. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.10 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
   1. Run grain of directional finishes with long dimension of each piece.

C. Directional Satin Finish: No. 4.
D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.11 STEEL AND IRON FINISHES

A. For interior nongalvanized-steel railings, provide nongalvanized ferrous-metal fittings, fasteners, and sleeves, unless otherwise indicated.

B. Preparing Nongalvanized Railings for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with AESS requirements indicated but not less than the following:

C. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
   1. Shop prime uncoated railings with primers specified in Section 099600 "High-Performance Coatings."

   1. Color: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.

B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
   1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
   2. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
   3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.

C. Adjust railings before anchoring to ensure matching alignment at abutting joints.
D. Fastening to In-Place Construction: Use anchorage devices and fasteners indicated.

3.3 RAILING CONNECTIONS

A. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

B. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within 6 inches of post.

3.4 ANCHORING POSTS

A. Weld posts to metal stair framing as indicated. Refer to Section 051213 "Architecturally Exposed Structural Steel (AESS)" for finishing of steel stair components for Grade indicated.

3.5 CABLE RAILING

A. Install cable railing system in accordance with manufacturer's instructions at locations indicated on the drawings.

B. Install cable railing system plumb, level, square, and rigid.

C. Anchor cable railing system to mounting surface as indicated on the drawings.

D. Use manufacturer's supplied cable hardware.

E. Terminate and tension cables in accordance with manufacturer's instructions.
   1. Tension cables to a minimum of 225 pounds each in sequence in accordance with manufacturer's instructions.

F. Ensure cables are clean, parallel to each other, and without kinks or sags.

G. Replace defective or damaged components as directed by Architect.

H. Repair damaged factory-applied finish as directed by Architect.

3.6 ATTACHING RAILINGS

A. Attach handrails to railing posts with post brackets and to walls with wall brackets. Provide brackets with 1-1/2-inch clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
   1. Walls: Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.
   2. Posts: Use type of bracket with flange tapped for concealed anchorage to tapped steel solid bar post as indicated.
   3. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
B. Secure wall brackets to building construction as follows:
   1. For steel-framed partitions, fasten brackets with fasteners as indicated in Drawings installed through flanges of steel framing or through concealed steel reinforcements.

3.7 CLEANING
   
A. Clean stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.

B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
   1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

3.8 PROTECTION
   
A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION
SECTION 060413 - COMMON SUBMITTAL REQUIREMENTS FOR WOODS, PLASTICS, AND COMPOSITES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:

1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.

1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:

1. Shop Drawings.
2. Product Data.
3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
   2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
   3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
   4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
      a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
   1. Refer to Section 01330 for quantity of days allowed for review.
   2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER'S AND GENERAL CONTRACTOR'S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect’s staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:

1. Action Codes Permitting Use:
   a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
   b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
   c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect’s notations and Contract Document requirements.
d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.

2. Action Code Prohibiting Use:
   a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
   a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. Informational Submittals: For Architect's information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

1. Action Code for Information Only:
   a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned un-reviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.

1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.

1. Submittal Numbering: See below.
2. Contact Information: Full Name, Phone Number and Email Address.

B. Submittal Definition

1. Each submittal consists of items from only ONE Specifications section.
2. **Complete Submittal:** If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.

3. **Partial Submittals:** If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).

4. **All items in each submittal, whether complete or partial, will be processed together:** Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.

**C. Submittal Numbering**

1. Number submittals as described below to assist tracking.

2. Number each submittal in the format nnnnnn-nn.
   a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.
   b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.
   c. **P-Number for Partial Submittals:** Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.
   d. **R-Number for Re-submittals:** Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.
   e. **Examples:**

**3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS**

**A.** Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.

**B.** When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

**C.** Do not edit any of the information contained within the Submittal Review Sheet except as follows:

1. **Submittal Number:** See Submittal Numbering in Submittal Transmittal Requirements paragraph.

**D.** The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION
PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Wood blocking and nailers.
   2. Wood furring.
   4. Plywood backing panels.

B. Related Requirements:
   1. Section 061600 "Sheathing."

1.3 DEFINITIONS

A. Lumber grading agencies, and the abbreviations used to reference them, include the following:
   1. NLGA: National Lumber Grades Authority.
   2. WCLIB: West Coast Lumber Inspection Bureau.
   3. WWPA: Western Wood Products Association.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
   1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
   2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
   3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5664.
   4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
   5. Include copies of warranties from chemical treatment manufacturers for each type of treatment.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Fastener Patterns: Full-size templates for fasteners in exposed framing.
1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

C. Provide the following upon request:
   1. Material Certificates: For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
   2. Evaluation Reports: For the following, from ICC-ES:
      a. Wood-preservative-treated wood.
      b. Fire-retardant-treated wood.
      c. Power-driven fasteners.
      d. Powder-actuated fasteners.
      e. Expansion anchors.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Stack lumber flat with spacers beneath and between each bundle to provide air circulation. Protect lumber from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
   1. Factory mark each piece of lumber with grade stamp of grading agency.

B. Maximum Moisture Content of Lumber: 19 percent unless otherwise indicated.

2.2 WOOD-PRESERVATIVE-TREATED LUMBER

A. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC2 for interior construction not in contact with the ground, Use Category UC3b for exterior construction not in contact with the ground, and Use Category UC4a for items in contact with the ground.
   1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. Do not use inorganic boron (SBX) for sill plates.

B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.
C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.

D. Application: Treat items indicated on Drawings, and the following:
   1. Wood sills, sleepers, blocking, and similar concealed members in contact with masonry or concrete.
   2. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
   3. Wood framing members that are less than 18 inches above the ground in crawlspaces or unexcavated areas.

2.3 FIRE-RETARDANT-TREATED MATERIALS

A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
   1. Use treatment that does not promote corrosion of metal fasteners.
   2. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering according to ASTM D 2898. Use for exterior locations and where indicated.
   3. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D 3201 at 92 percent relative humidity. Use where exterior type is not indicated.
   4. Design Value Adjustment Factors: Treated lumber shall be tested according ASTM D 5664 and design value adjustment factors shall be calculated according to ASTM D 6841. For enclosed roof framing, framing in attic spaces, and where high temperature fire-retardant treatment is indicated, provide material with adjustment factors of not less than 0.85 modulus of elasticity and 0.75 for extreme fiber in bending for Project's climatological zone.

C. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent.[ Kiln-dry plywood after treatment to a maximum moisture content of 15 percent.]

D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency.

E. Application: Treat items indicated on Drawings, and the following:
   1. Roof-related construction.
   2. Plywood backing panels.

2.4 MISCELLANEOUS LUMBER

A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
1. Blocking.
2. Nailers.
3. Furring.

B. For items of dimension lumber size, provide Construction or No. 2 grade lumber and any of the following species:
   1. Hem-fir; WCLIB or WWPA.
   2. Spruce-pine-fir (south); WCLIB, or WWPA.
   3. Western woods; WCLIB or WWPA.

C. For concealed boards, provide lumber with 15 percent maximum moisture content and any of the following species and grades:
   1. Hem-fir or hem-fir (north); Construction or No. 2 Common grade; NLGA, WCLIB, or WWPA.
   2. Spruce-pine-fir (south) or spruce-pine-fir; Construction or No. 2 Common grade; NLGA, WCLIB, or WWPA.
   3. Western woods; Construction or No. 2 Common grade; WCLIB or WWPA.

D. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.

E. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.

F. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.5 SHELVING AND CLOTHES RODS

A. Utility Shelving: Made from the following material, 3/4 inch thick.
   1. Melamine-faced particleboard with applied-PVC front edge.

B. Shelf Cleats: 3/4-by-5-1/2-inch boards with hole and notch to receive clothes rods, as specified above for shelving.

C. Shelf Brackets with Rod Support: BHMA A156.16, B04051; prime-painted formed steel.

D. Shelf Brackets without Rod Support: BHMA A156.16, B04041; prime-painted formed steel.

E. Standards for Adjustable Shelf Brackets: BHMA A156.9, B04102; powder-coat-finished steel.

F. Adjustable Shelf Brackets: BHMA A156.9, B04112; powder-coat-finished steel.

H. Rod Flanges: Aluminum.

2.6 PLYWOOD BACKING PANELS

A. Equipment Backing Panels: DOC PS 1, Exterior, C-C Plugged, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch nominal thickness; painted.
2.7 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
   1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners of Type 304 stainless steel.

B. Nails, Brads, and Staples: ASTM F 1667.

D. Wood Screws: ASME B18.6.1.

E. Lag Bolts: ASME B18.2.1.

F. Bolts: Steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and, where indicated, flat washers.

G. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated.
   1. Material: Stainless steel with bolts and nuts complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2.

2.8 MISCELLANEOUS MATERIALS

A. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, rubberized-asphalt compound, bonded to a high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than 0.025 inch.

B. Water-Repellent Preservative: NWWDA-tested and -accepted formulation containing 3-iodo-2-propynyl butyl carbamate, combined with an insecticide containing chloropyrifos as its active ingredient.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry to other construction; scribe and cope as needed for accurate fit. Locate furring, nailers, blocking, and similar supports to comply with requirements for attaching other construction.

B. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant treated plywood backing panels with classification marking of testing agency exposed to view.

C. Do not splice structural members between supports unless otherwise indicated.

D. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches o.c.

E. Sort and select lumber so that natural characteristics will not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.

F. Comply with AWPA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
   1. Use inorganic boron for items that are continuously protected from liquid water.
   2. Use copper naphthenate for items not continuously protected from liquid water.

G. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
   1. NES NER-272 for power-driven fasteners; or.

H. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

I. For exposed work, arrange fasteners in straight rows parallel with edges of members, with fasteners evenly spaced, and with adjacent rows staggered.
   1. Comply with approved fastener patterns where applicable. Before fastening, mark fastener locations, using a template made of sheet metal, plastic, or cardboard.
   2. Use finishing nails unless otherwise indicated. Countersink nail heads and fill holes with wood filler.

3.2 WOOD BLOCKING, AND NAILER INSTALLATION

A. Install where indicated and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.

B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.

C. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.

3.3 WOOD FURRING INSTALLATION

A. Install level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.

B. Furring to Receive Plywood or Hardboard Paneling: Install 1-by-3-inch nominal- size furring horizontally at 24 inches o.c.
3.4 PROTECTION

A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

B. Protect rough carpentry from weather. If, despite protection, rough carpentry becomes sufficiently wet that moisture content exceeds that specified, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION
SECTION 061600 - SHEATHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Exterior glass-mat wall sheathing.
   2. Exterior cement board wall sheathing.
   3. Laminated structural shear wall panels

B. Related Requirements:
   1. Section 061000 "Rough Carpentry" for plywood backing panels.
   2. Section 072100 "Thermal Insulation" for thermal spacers and furring for installation of cement backer boards over continuous insulation.
   3. Section 072726 "Membrane Air Barriers" for water-resistive barrier applied over wall sheathing.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For laminated structural shear wall panels as follows:
   1. Shear wall layout, framing and supports, with dimensions and sections.
   2. Shear wall/Diaphragm load tables using specified shear wall panels, fastener size/type and spacing shall be attached to designed shear walls that define the size of required collector posts for shear, along with required wall framing hardware, size or gage and on center stud/joist spacing for Vertical/Diaphragm and Concentrated loads as well as lateral load resistance that have been engineered.
   3. Details of proprietary or non-proprietary components if included.

1.4 QUALITY ASSURANCE

A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
1.5 DELIVERY, STORAGE, AND HANDLING

A. Package and handle sheathing to prevent damage during shipping and unloading.

B. Stack panels flat off of ground with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For assemblies with fire-resistance ratings, provide materials and construction identical to those of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.

2.2 EXTERIOR WALL SHEATHING

A. Drawing Keynote Type: "Exterior Sheathing"

   a. Basis-of-Design Product: Subject to compliance with requirements, provide Dens-Glass Gold as manufactured by G-P Gypsum Corporation, or comparable by one of the following tested components in NFPA 285 compliant assembly:
      1) CertainTeed Corporation; GlasRoc.
      2) National Gypsum Company; Gold Bond e(2)XP.
      3) United States Gypsum Co.;

2. Type and Thickness: Type X, 5/8 inch thick.

B. Drawing Keynote Type: "Exterior Sheathing Type-2"

   a. Basis-of-Design Product: Subject to compliance with requirements, provide Dens-Deck Prime as manufactured by G-P Gypsum Corporation, or comparable by one of the following:
      1) CertainTeed Corporation;
      2) National Gypsum Company.
      3) United States Gypsum Co.;

2. Type and Thickness: Type X, 5/8 inch thick.

2.3 CEMENT BOARD WALL SHEATHING

A. Cementitious Backer Units: ASTM C 1325, Type A.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. C-Cure; C-Cure Board 990.
b. Custom Building Products; Wonderboard.
c. FinPan, Inc.; Util-A-Crete Concrete Backer Board.
d. USG Corporation; DUROCK Cement Board.

2. Thickness: 5/8 inch, except use 1/2 inch at ceiling/soffits.

2.4 PARAPET SHEATHING

A. Glass-Mat Faced Gypsum Roof Board: ASTM C 1177.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide DensDeck Roof Board as manufactured by G-P Gypsum Corporation, or comparable by one of the following:
      a. CertainTeed Corporation.
      c. United States Gypsum Co.
   2. Thickness: 5/8 inch thick.

2.5 LAMINATED STRUCTURAL SHEAR WALL PANELS

A. Shear Wall Shear Capacity:
   1. Refer to Drawings and Section 054000 "Cold-Formed Metal Framing" for gage for framing and attachment of the laminated structural shear wall panels to provide a panel shear capacity in accordance with IAPMO-ES evaluation report number ER-0126/ICC-ES evaluation Report ER 5762 as applicable.
   2. No other similar materials, stated load capacities or methods of attachment to framing studs/track/plates other than those stated on these approvals for Sure-Board® products will be acceptable as an equal.
   3. Changes to the specified products are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

B. Drawing Keynote Type: "Exterior Sheathing Type-3":
   1. Description: Galvanized steel sheet laminated to glass-mat-faced gypsum panels, as follows:
      a. Steel sheet: 0.027-inch thick (22-gauge) minimum ASTM A 653 CS, Grade 33, with G-40 hot-dipped galvanized coating conforming to ASTM A924.
      b. Adhesive; Water soluble
      c. Panel: Glass-mat-faced gypsum sheathing, ASTM C 1177, 5/8-inch thick, Type 'X'.
      d. Fasteners: Self-drilling, self-tapping pilot point bugle head screws, #8 by 1-5/8-inch, unless otherwise indicated, with cutting nubs under screw head to seat into sheathing. Fasteners shall be provided by sheathing manufacturer.
      e. Product: Sure-Board Series 200 Structural Sheathing Panels as manufactured by CEMCO.

C. Drawing Keynote Type: "Interior Sheathing Type-1"
   1. Description: Galvanized steel sheet laminated to gypsum board panels, as follows:
      a. Steel sheet: 0.027-inch thick (22-gauge) minimum ASTM A 653 CS, Grade 33, with G-40 hot-dipped galvanized coating conforming to ASTM A924.
      b. Adhesive; Water soluble
      c. Panel: Gypsum Board, ASTM C 1369, 5/8-inch thick, Type 'X'.
d. Fasteners: Self-drilling, self-tapping pilot point bugle head screws, #8 by 1-5/8-inch, unless otherwise indicated, with cutting nubs under screw head to seat into sheathing. Fasteners shall be provided by sheathing manufacturer.

e. Finish: Level 5, in accordance with Section 092900 "Gypsum Board."

f. Product: Sure-Board Series 200 Structural Sheathing Panels as manufactured by CEMCO.

2.6 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.

1. For wall sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M.

B. Nails, Brads, and Staples: ASTM F 1667.

D. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.

1. For steel framing less than 0.0329 inch thick, use screws that comply with ASTM C 1002.
2. For steel framing from 0.033 to 0.112 inch thick, use screws that comply with ASTM C 954.

E. For structural shear wall panels, use fasteners indicated as minimum or as required by manufacturer for imposed loads.

2.7 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

A. Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C 834, compatible with sheathing tape and sheathing and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.

1. Sheathing Tape: Self-adhering glass-fiber tape, minimum 2 inches wide, 10 by 10 or 10 by 20 threads/inch, of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.

B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
C. Securely attach to substrate by fastening as indicated, complying with the following:
   1. NES NER-272 for power-driven fasteners.
   2. Table 2304.9.1, "Fastening Schedule," in ICC's "International Building Code."

D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.

E. Coordinate wall sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

3.2 GYPSUM SHEATHING INSTALLATION

A. Comply with GA-253 and with manufacturer's written instructions.
   1. Fasten gypsum sheathing to cold-formed metal framing with screws.
   2. Install boards with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
   3. Install boards with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.

B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.

C. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent boards without forcing. Abut ends of boards over centers of studs, and stagger end joints of adjacent boards not less than one stud spacing. Attach boards at perimeter and within field of board to each steel stud.
   1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of boards.
   2. For sheathing under stucco cladding, boards may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.

D. Vertical Installation: Install board vertical edges centered over studs. Abut ends and edges of each board with those of adjacent boards. Attach boards at perimeter and within field of board to each stud.
   1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of boards.
   2. For sheathing under stucco cladding, boards may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.

E. Seal sheathing joints according to sheathing manufacturer's written instructions.
1. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient amount of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.

2. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel silicone emulsion sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.

3.3 CEMENTITIOUS BACKER UNIT INSTALLATION

A. Install panels and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated.

B. Cementitious Backer Units: Install over thermal spacers and furring. Refer to Section 07 2100 "Thermal Insulation" for products and installation requirements of thermal spacers and furring.

3.4 LAMINATED STRUCTURAL PANEL INSTALLATION

A. Comply with ASTM C 846 and with manufacturer's written instructions.

B. Install sheathing vertically with long edges parallel to, and centered over, studs. Install solid wood blocking where end joints do not occur over framing. Allow 1/8-inch open space between edges and ends of adjacent units. Stagger horizontal joints if any. Install and fasten according to sheathing manufacturer's written instructions in accordance with performance requirements.

C. Fastening Methods: Fasten panels in accordance with manufacturer's instructions and in accordance with structural design as indicated below:

1. Wall and Roof Sheathing:
   a. Screw to cold-formed metal framing. Avoid jacking of sheet steel from the stud and track during installation.
   b. Space panels 1/8 inch apart at edges and ends.
   c. Provide screws on edges and field in accordance with Structural Drawings.

D. Finishing: Tape and seal exterior glass-mat-faced gypsum panels according to gypsum panel manufacturer's written instructions and as indicated above. Finish interior gypsum board panels in accordance with finish indicated.

END OF SECTION
SECTION 064116 - PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Plastic-laminate-faced architectural cabinets.
      2. Wood furring, blocking, shims, and hanging strips for installing plastic-laminate-faced architectural cabinets unless concealed within other construction before cabinet installation.
   B. Related Requirements:
      1. Section 061000 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing cabinets and concealed within other construction before cabinet installation.

1.3 PREINSTALLATION MEETINGS
   A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS
   A. Product Data: For each type of product - panel products, high-pressure decorative laminate, adhesive for bonding plastic laminate, fire-retardant-treated materials, and cabinet hardware and accessories.
      1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
   B. Sustainable Design Submittals required by Section 01813 applicable to this Section.
   C. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
      1. Show details full size.
      2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
      3. Show locations and sizes of cutouts and holes for [electrical switches and outlets] [and other items] installed in architectural plastic-laminate cabinets.
   D. Samples for Initial Selection:
      1. PVC edge material.
      2. Thermoset decorative panels.
E. Samples for Verification:
   1. Plastic laminates, 8 by 10 inches, for each color, pattern, and surface finish, with one sample applied to core material and specified edge material applied to one edge.
   2. Thermoset decorative panels, 8 by 10 inches, for each color, pattern, and surface finish, with edge banding on one edge.
   3. Exposed cabinet hardware and accessories, one unit for each type and finish.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program or is a licensee of WI's Certified Compliance Program.

B. Installer Qualifications: Fabricator of products.

C. Provide the following upon request:
   1. Qualification Data: For fabricator.
   2. Product Certificates: For the following:
      a. Composite wood and agrifiber products.
      b. Thermoset decorative panels.
      c. High-pressure decorative laminate.
      d. Adhesives.
   3. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.

D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Build mockups of typical plastic-laminate cabinets as shown on Drawings.
   2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver cabinets until painting and similar operations that could damage woodwork have been completed in installation areas. If cabinets must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 43 and 70 percent during the remainder of the construction period.

B. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS

A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of architectural plastic-laminate cabinets indicated for construction, finishes, installation, and other requirements.
1. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.

B. Grade: Custom.

C. Regional Materials: Wood products shall be manufactured within 100 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

D. Certified Wood: Plastic-laminate cabinets shall be made from wood products certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001 and FSC STD-40-004.

E. Type of Construction: Frameless.

F. Cabinet, Door, and Drawer Front Interface Style: Flush overlay.

G. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or if not indicated, as required by woodwork quality standard.
1. Manufacturers: Subject to compliance with requirements, provide products indicated on Drawings, or comparable by one of the following:
   a. Abet Laminati, Inc.
   b. Formica Corporation.
c. Lamin-Art, Inc.
d. Panolam Industries International, Inc.
e. Wilsonart International; Div. of Premark International, Inc.

H. Laminate Cladding for Exposed Surfaces:
1. Horizontal Surfaces: Grade HGS.
2. Vertical Surfaces: Grade HGS.
3. Edges: Grade HGS PVC edge banding, 0.12 inch thick, matching laminate in color, pattern, and finish.
4. Pattern Direction: Vertically for doors and fixed panels, horizontally for drawer fronts.

I. Materials for Semiexposed Surfaces:
1. Surfaces Other Than Drawer Bodies: Thermoset decorative panels.
   a. Edges of Plastic-Laminate Shelves: PVC edge banding, 0.12 inch thick, matching laminate in color, pattern, and finish.
   b. Edges of Thermoset Decorative Panel Shelves: PVC or polyester edge banding.
   c. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, NEMA LD 3, Grade VGS.
2. Drawer Sides and Backs: Thermoset decorative panels with PVC or polyester edge banding.
3. Drawer Bottoms: Thermoset decorative panels.

J. Dust Panels: 1/4-inch plywood or tempered hardboard above compartments and drawers unless located directly under tops.

K. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, NEMA LD 3, Grade BKL.

L. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.
   1. Join subfronts, backs, and sides with glued rabbeted joints supplemented by mechanical fasteners.

M. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
   1. As indicated by laminate manufacturer's designations.

2.3 WOOD MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
   1. Wood Moisture Content: 8 to 13 percent.

B. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
   1. Recycled Content of MDF and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
2. Composite Wood Products: Products shall be made using ultra-low-emitting
formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic
Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products"
or shall be made with no added formaldehyde.

3. MDF: ANSI A208.2, Grade 130.

4. Straw Based Particleboard: ANSI A208.1, Grade M-2, except for density.
   a. Products: Subject to compliance with requirements, [provide the following]
      [provide one of the following] [available products that may be incorporated into the
      Work include, but are not limited to, the following]:
      1) Environ Biocomposites Manufacturing LLC; Biofiber Wheat.
      2) Sorm Incorporated; Primeboard Premium Wheat.

5. Softwood Plywood: DOC PS 1, medium-density overlay.

6. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with
   thermally fused, melamine-impregnated decorative paper and complying with
   requirements of NEMA LD 3, Grade VGL, for test methods 3.3, 3.4, 3.6, 3.8, and 3.10.

2.4 FIRE-RETARDANT-TREATED MATERIALS

A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are
   indicated, use materials complying with requirements in this article that are acceptable to
   authorities having jurisdiction and with fire-test-response characteristics specified as determined
   by testing identical products per test method indicated by a qualified testing agency.
   1. Use treated materials that comply with requirements of referenced woodworking
      standard. Do not use materials that are warped, discolored, or otherwise defective.
   2. Use fire-retardant-treatment formulations that do not bleed through or otherwise
      adversely affect finishes. Do not use colorants to distinguish treated materials from
      untreated materials.
   3. Identify fire-retardant-treated materials with appropriate classification marking of qualified
      testing agency in the form of removable paper label or imprint on surfaces that will be
      concealed from view after installation.

B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less
   when tested according to ASTM E 84, with no evidence of significant progressive combustion
   when the test is extended an additional 20 minutes, and with the flame front not extending more
   than 10.5 feet beyond the centerline of the burners at any time during the test.
   1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15
      percent, respectively.
   2. For items indicated to receive a stained or natural finish, use organic resin chemical
      formulation.

C. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2,
   made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time
   of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index
   of 200 or less per ASTM E 84.
   1. Products: Subject to compliance with requirements, available products that may be
      incorporated into the Work include, but are not limited to, the following:
      b. SierraPine; Medite FR.
2.5 CABINET HARDWARE AND ACCESSORIES

A. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, 170 degrees of opening, self-closing.

B. Wire Pulls: Back mounted, solid metal, 4 inches long, 5/16 inch in diameter.

C. Catches: Push-in magnetic catches, BHMA A156.9, B03131.

D. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; with shelf rests, B04081.

E. Shelf Rests: BHMA A156.9, B04013; metal, two-pin type with shelf hold-down clip.

F. Drawer Slides: BHMA A156.9.
   1. Grade 1 and Grade 2: Side mounted[ and extending under bottom edge of drawer]; partial-extension type; epoxy-coated steel with polymer rollers.
   2. Grade 1HD-100 and Grade 1HD-200: Side mounted; full-overtravel-extension type; zinc-plated-steel ball-bearing slides.
   3. For drawers not more than 3 inches high and not more than 24 inches wide, provide Grade 1.
   4. For drawers more than 3 inches high but not more than 6 inches high and not more than 24 inches wide, provide Grade 1HD-100.
   5. For drawers more than 6 inches high or more than 24 inches wide, provide Grade 1HD-200.
   6. For computer keyboard shelves, provide Grade 1.

G. Door Locks: BHMA A156.11, E07121.

H. Drawer Locks: BHMA A156.11, E07041.

I. Door and Drawer Silencers: BHMA A156.16, L03011.

J. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.
   1. Satin Stainless Steel: BHMA 630.

K. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

2.6 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: [Softwood or hardwood lumber] [Fire-retardant-treated softwood lumber], kiln dried to less than 15 percent moisture content.

B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

C. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

D. Adhesive for Bonding Plastic Laminate: Unpigmented contact cement.
1. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

2.7 FABRICATION

A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.

B. Fabricate cabinets to dimensions, profiles, and details indicated.

C. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

D. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

E. Cabinet Doors:
   1. Doors Up To 80 Inches High: 3/4 inch thick panel product.
   2. Doors Over 80 Inches High: 1-3/8" thick solid-core, custom grade, 3 or 5 ply, particleboard core with stiles and rails bonded to core, WDMA I.S.1-A standard duty. Face finish same as custom cabinets. Comply with AWI Section 9.

PART 3 - EXECUTION

3.1 PREPARATION

A. Before installation, condition cabinets to average prevailing humidity conditions in installation areas.

B. Before installing cabinets, examine shop-fabricated work for completion and complete work as required.

3.2 INSTALLATION

A. Grade: Install cabinets to comply with same grade as item to be installed.

B. Assemble cabinets and complete fabrication at Project site to the extent that it was not completed in the shop.

C. Install cabinets level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches.

D. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
E. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork.

1. Use filler matching finish of items being installed.

F. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Install cabinets with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
2. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches o.c. with toggle bolts through metal backing or metal framing behind wall finish.

3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

B. Clean, lubricate, and adjust hardware.

C. Clean cabinets on exposed and semiexposed surfaces.

END OF SECTION
SECTION 066400 - PLASTIC PANELING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Plastic sheet paneling.

B. Related Requirements:
   1. Section 061000 "Rough Carpentry" for wood furring for installing plastic paneling.
   2. Section 102600 "Wall and Door Protection" for impact-resistant plastic paneling used as wall protection.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Samples: For plastic paneling and trim accessories, in manufacturer's standard sizes.

1.4 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install plastic paneling until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain plastic paneling and trim accessories from single manufacturer.

2.2 PLASTIC SHEET PANELING

A. Glass-Fiber-Reinforced Plastic Paneling, Type FRP: Gelcoat-finished, glass-fiber-reinforced plastic panels complying with ASTM D 5319. Panels shall be USDA accepted for incidental food contact.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Composites, Inc.
   b. Glasteel.
   c. Marlite.
   d. Newcourt, Inc.
   e. Nudo Products, Inc.

2. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

3. Surface-Burning Characteristics: As follows when tested by a qualified testing agency according to ASTM E 84. Identify products with appropriate markings of applicable testing agency.
   a. Flame-Spread Index: 25 or less.
   b. Smoke-Developed Index: 450 or less.

4. Nominal Thickness: Not less than 0.060 inch.

5. Surface Finish: Smooth.

6. Color: As selected by Architect from manufacturer's full range.

2.3 ACCESSORIES

A. Trim Accessories: Manufacturer's standard one-piece vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, outside corners, and caps as needed to conceal edges.

B. Adhesive: As recommended by plastic paneling manufacturer.

C. Sealant: Mildew-resistant, single-component, neutral-curing silicone sealant recommended by plastic paneling manufacturer and complying with requirements in Section 079200 "Joint Sealants."
   1. Sealant shall have a VOC content of 250 g/L or less.
   2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 PREPARATION

A. Remove loose or soluble paint, and other materials that might interfere with adhesive bond.

B. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.

C. Clean substrates of substances that could impair adhesive bond, including oil, grease, dirt, and dust.

D. Condition panels by unpacking and placing in installation space before installation according to manufacturer’s written recommendations.

E. Lay out paneling before installing. Locate panel joints so that trimmed panels at corners are not less than 12 inches wide.
   1. Mark plumb lines on substrate at [trim accessory] [panel joint] locations for accurate installation.
   2. Locate trim accessories to allow clearance at panel edges according to manufacturer's written instructions.

3.3 INSTALLATION

A. Install plastic paneling according to manufacturer's written instructions.

B. Install panels in a full spread of adhesive.

C. Install trim accessories with adhesive.

D. Fill grooves in trim accessories with sealant before installing panels, and bed inside corner trim in a bead of sealant.

E. Maintain uniform space between panels and wall fixtures. Fill space with mildew-resistant sealant.

F. Maintain uniform space between adjacent panels and between panels and floors, ceilings, and fixtures. Fill space with sealant.

G. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

END OF SECTION
SECTION 070413 - COMMON SUBMITTAL REQUIREMENTS FOR THERMAL AND MOISTURE PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:
   1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.
   1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:
   1. Shop Drawings.
   2. Product Data.
   3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
   2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
   3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
   4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
      a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
   1. Refer to Section 01330 for quantity of days allowed for review.
   2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER'S AND GENERAL CONTRACTOR'S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect's staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:

1. Action Codes Permitting Use:
   a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
   b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
   c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect's notations and Contract Document requirements.
d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor’s risk, provided it complies with the Architect’s notations and Contract Document requirements.

2. Action Code Prohibiting Use:
   a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect’s notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
   a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. Informational Submittals: For Architect’s information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

   1. Action Code for Information Only:
      a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned un-reviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.

   1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.

   1. Submittal Numbering: See below.
   2. Contact Information: Full Name, Phone Number and Email Address.

B. Submittal Definition

   1. Each submittal consists of items from only ONE Specifications section.
COMMON SUBMITTAL REQUIREMENTS FOR THERMAL AND MOISTURE PROTECTION

2. **Complete Submittal:** If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.

3. **Partial Submittals:** If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).

4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.

C. **Submittal Numbering**

1. Number submittals as described below to assist tracking.
2. Number each submittal in the format nnnnnn-nn.
   a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.
   b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.
   c. **P-Number for Partial Submittals:** Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.
   d. **R-Number for Re-submittals:** Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.
   e. Examples:

3.4 **SUBMITTAL REVIEW SHEET REQUIREMENTS**

A. Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.

B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:
   1. **Submittal Number:** See Submittal Numbering in Submittal Transmittal Requirements paragraph.

D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION
SECTION 071113 - BITUMINOUS DAMPPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Cold-applied, emulsified-asphalt dampproofing.
      2. Protection course.
   B. Apply dampproofing to surfaces indicated, including:
      1. Concrete foundation walls.
   C. Related Requirements:
      1. Section 030513 "Common Work Results for Cast-in-Place Concrete" for bituminous vapor retarders/barriers under slab.
      2. Section 071326 "Self-Adhering Sheet Waterproofing" for waterproofing.

1.3 ACTION SUBMITTALS
   A. Product Data:  For each type of product.
   B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

1.4 FIELD CONDITIONS
   A. Weather Limitations:  Proceed with application only when existing and forecasted weather conditions permit dampproofing to be performed according to manufacturers' written instructions.
   B. Ventilation:  Provide adequate ventilation during application of dampproofing in enclosed spaces.  Maintain ventilation until dampproofing has cured.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL
   A. Source Limitations:  Obtain primary dampproofing materials and primers from single source from single manufacturer.  Provide protection course auxiliary materials recommended in writing by manufacturer of primary materials.
B. Application Method: Based on substrate, use dampproofing designed for the following application method:
   1. For cast-in-place concrete substrates: Use roller, brush, or trowel, per manufacturer recommendations.

2.2 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. BASF Construction Chemicals - Building Systems; Sonneborn Brand Products; Hydrocide 700.

B. Trowel Coats: ASTM D 1227, Type II, Class 1, fibered.

C. Fibered Brush and Roller Coats: ASTM D 1227, Type II, Class 1.

2.3 AUXILIARY MATERIALS

A. General: Furnish auxiliary materials recommended in writing by dampproofing manufacturer for intended use and compatible with bituminous dampproofing.

B. Primer: As recommended in writing by manufacturer of dampproofing to be applied.

C. Asphalt-Coated Glass Fabric Reinforcement: ASTM D 1668, Type I.

D. Patching Compound: Epoxy or latex-modified repair mortar or Asbestos-free fibered mastic of type recommended in writing by dampproofing manufacturer.

2.4 PROTECTION COURSE

A. Protection Course: Fan folded, with a core of extruded-polystyrene board insulation faced on both sides with plastic film, nominal thickness 1/4 inch, with a compressive strength of not less than 8 psi per ASTM D 1621, and maximum water absorption by volume of 0.6 percent per ASTM C 272.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions with Applicator present, for compliance with requirements for surface smoothness, surface moisture, and other conditions affecting performance of bituminous dampproofing work.

B. Proceed with application only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.
3.2 PREPARATION

A. Mask or otherwise protect adjoining exposed surfaces from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.

B. Clean substrates of projections and substances detrimental to the dampproofing work; fill voids, seal joints, and remove bond breakers if any, as recommended in writing by prime material manufacturer.

C. Apply patching compound to patch and fill tie holes, honeycombs, reveals, and other imperfections; cover with asphalt-coated glass fabric where required by manufacturer.

3.3 APPLICATION, GENERAL

A. Comply with manufacturer’s written recommendations unless more stringent requirements are indicated or required by Project conditions to ensure satisfactory performance of Dampproofing.

1. Apply primer to affected substrates.
2. Apply first coat of dampproofing over primer.
3. Embed fabric reinforcement into first ply of dampproofing.
4. Apply second coat of dampproofing to required thickness.
5. Apply additional coats if recommended by manufacturer or if required to achieve coverages indicated.
6. Allow each coat of dampproofing to cure per manufacturers written instructions before applying subsequent coats.
7. Allow dampproofing to cure prior to backfilling.

B. Where dampproofing footings and foundation walls, apply from finished-grade line to top of footing; extend over top of footing and down a minimum of 6 inches over outside face of footing.

1. Extend dampproofing 12 inches onto intersecting walls and footings, but do not extend onto surfaces exposed to view when Project is completed.
2. Install flashings and corner protection stripping at internal and external corners, changes in plane, construction joints, cracks, and where shown as “reinforced,” by embedding an 8-inch wide strip of asphalt-coated glass fabric in a heavy coat of dampproofing. Dampproofing coat for embedding fabric is in addition to other coats required.

3.4 INSTALLATION OF PROTECTION COURSE

A. Where indicated, install protection course over completed-and-cured dampproofing. Comply with dampproofing-material and protection-course manufacturers’ written instructions for attaching protection course.

1. Support protection course over cured coating with spot application of adhesive type recommended in writing by protection-board manufacturer.
2. Install protection course after installation of dampproofing (while coating is tacky) to ensure adhesion and as recommended by the dampproofing manufacturer.

3.5 CLEANING

A. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.
END OF SECTION
SECTION 071326 - BELOW-GRADE SHEET WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Post-applied modified bituminous sheet waterproofing.
   3. Protection course.
   4. Insulation drainage board.

B. Related Requirements:
   1. Section 033000 "Cast-in-Place Concrete" for vertical and horizontal concrete substrate and underslab vapor retarders.
   2. Section 075558 "Fluid-Applied Protected Membrane Roofing" for rooftop plaza-deck waterproofing and pavers.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, adhesion to contaminated substrate (e.g. concrete curing compounds and form release agents), substrate curing period weather related restrictions during installation, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs. The Contractor: Include the following activities:
      a. Before starting application of membrane waterproofing work, arrange a job-site meeting with the Architect, the Testing Agency and manufacturer representative to discuss the following:
         1) The waterproofing system, number of plies, termination and flashing requirements.
         2) Intermediate and final requirements of protecting the work.
         3) The different substrates that will receive the waterproofing and preparation requirements for each.
         4) Curing requirements for concrete.
         5) Concrete form release agent precautions.
         6) Job specific recommendations on use of primers.
         7) Hot, cold and wet condition precautions.
         8) Scheduling and coordination with other construction, such as waterproofing overlaps that must be installed during construction of walls and footings both above and below grade.
         9) Protection of the work and repair procedures.
10) Verify in writing to the Owner’s representative, that the contractor’s full time on site foreman and crew etc. (as required) are certified, or meet the requirements of the manufacturer of the waterproofing, as installers.

b. Whenever the membrane waterproofing work is to be done, notify Testing Agency in sufficient time to arrange inspections.

c. Provide safe access to the location of the Work for proper inspection.

d. Post installation testing (e.g. Flood Testing or Electronic Field Vector Mapping.)

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
   2. Include manufacturer’s written instructions for evaluating, preparing, and treating substrate.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

D. Samples: For each exposed product and for each color and texture specified, including the following products:
   1. Minimum 8-by-8-inch square of waterproofing and flashing sheet.
   2. Minimum 4-by-4-inch square of drainage panel and protection board.
   3. Minimum 4-by-4-inch (200-by-200-mm) square of each type of insulation board.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.

B. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Manufacturer’s daily field-quality control inspection reports.

1.6 FIELD CONDITIONS

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
   1. Do not apply waterproofing in snow, rain, fog, or mist.

B. Maintain adequate ventilation during preparation and application of waterproofing materials.

C. Compatibility:
1. Where new work interfaces existing waterproofed construction, remove existing waterproofing as required to install new work. Interface new waterproofing with existing system to provide continuous system without leaks. Ensure compatibility of system materials.

2. The waterproofing manufacturer shall submit a letter stating compatibility or concerns with existing, or adjacent, waterproofing.

1.7 WARRANTY

A. Manufacturer's Warranty: Manufacturer's standard materials-only warranty in which manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Source Limitations for Waterproofing System: Obtain waterproofing materials and molded-sheet drainage panels from single source from single manufacturer.

2.2 POST-APPLIED SHEET WATERPROOFING

A. Modified Bituminous Sheet: Minimum 60-mil nominal thickness, self-adhering sheet consisting of 56 mils of rubberized asphalt laminated on one side to a 4-mil-thick, polyethylene-film reinforcement, and with release liner on adhesive side; formulated for application with primer that complies with VOC limits of authorities having jurisdiction.

1. Basis-of-Design Products: Subject to compliance with requirements, provide Bituthene 3000 or Bituthene 3000 Low Temperature as manufactured by GCP Applied Technologies (formerly Grace Construction Products; W.R. Grace & Co.), or comparable by one of the following:
   a. Carlisle Coatings & Waterproofing Inc.
   b. Henry Company

2. Physical Properties:
   a. Tensile Strength, Membrane: 250 psi minimum; ASTM D 412, Die C, modified.
   b. Ultimate Elongation: 300 percent minimum; ASTM D 412, Die C, modified.
   d. Crack Cycling: Unaffected after 100 cycles of 1/8-inch movement; ASTM C 836.
   e. Puncture Resistance: 40 lbf minimum; ASTM E 154.
   f. Water Absorption: 0.2 percent weight-gain maximum after 48-hour immersion at 70 deg F; ASTM D 570.
   g. Water Vapor Permeance: 0.05 perms maximum; ASTM E 96/E 96M, Water Method.
   h. Hydrostatic-Head Resistance: 200 feet minimum; ASTM D 5385.

2.3 AUXILIARY MATERIALS

A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.

B. Surface Conditioner: Liquid conditioner recommended for substrate by sheet-waterproofing material manufacturer.

C. Primer: Liquid primer recommended for substrate by sheet-waterproofing material manufacturer.

D. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, of trowel grade or low viscosity.

E. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating.

F. Sheet Strips: Self-adhering, rubberized-asphalt sheet strips of same material and thickness as sheet waterproofing.

G. Mastic, Adhesives, and Detail Tape: Liquid mastic and adhesives, and adhesive tapes recommended by waterproofing manufacturer.
   1. Detail Tape: Two-sided, pressure-sensitive, self-adhering reinforced tape, 4-1/2 inches wide, with a tack-free protective adhesive coating on one side and release film on self-adhering side.

H. Metal Termination Bars:
   1. Termination Bar: Stainless Steel 1 inch by 8 feet, 0.075" thick, with 5/16" holes 8" to 9" on center. Basis of design: Advanced Building Products Inc. Stainless Steel Termination Bar.
   2. Expansion Anchor: 1/4" x 2" expansion anchor consisting of a Type 304 Stainless Steel drive pin and an expanding body. Basis of design: Hilti Metal HIT Anchor.

I. Protection Course: ASTM D6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
   1. Thickness: Nominal 1/8 inch for vertical applications; 1/4 inch elsewhere.
   2. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for protection course type.

2.4 MOLDED-SHEET DRAINAGE PANELS

A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite subsurface drainage panel consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 sieve laminated to one side of the core and a polymeric film bonded to the other side; and with a vertical flow rate of 9 to 18 gpm per ft..
   1. Products: Subject to compliance with requirements, provide products supplied by or approved by membrane manufacturer.
   2. Application: Vertical, below-grade, drainage panel over insulation over protection course over waterproof membrane over concrete foundation.
2.5 INSULATION

A. Drawing Keynote XPS-1: Faced, extruded-polystyrene drainage board insulation complying with ASTM C 578, Type IV, 25-psi minimum compressive strength; faced with filtration fabric; tongue-and-groove edges and with one side having ribbed drainage channels.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Foamular Insul-Drain as manufactured by Owens Corning, or comparable by one of the following:
   a. Dow Sytrofoam Perimate
   b. Kingspan Greenguard

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the waterproofing.

1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.

2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method according to ASTM D 4263.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.

B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.

E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.

1. Install sheet strips of width according to manufacturer's written instructions and center over treated construction and contraction joints and cracks.

F. Bridge and cover discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths according to manufacturer's written instructions.

G. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D 6135.
1. Install membrane strips centered over vertical inside corners. Install 3/4-inch fillets of liquid membrane on horizontal inside corners and as follows:
   a. At footing-to-wall intersections, extend liquid membrane in each direction from corner or install membrane strip centered over corner.
   b. At plaza-deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.

H. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions according to ASTM D 6135.

3.3 POST-APPLIED VERTICAL SHEET-WATERPROOFING APPLICATION

A. Install modified bituminous sheets according to waterproofing manufacturer's written instructions and recommendations in ASTM D 6135.

B. Apply surface conditioner and primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprim areas exposed for more than 24 hours.

C. Apply reinforcement sheet strips over liquid membrane fillet at transitions from vertical to horizontal planes according to waterproofing manufacturer's written instructions.

D. Apply and firmly adhere sheets, 100 percent back rolled, over area to receive waterproofing. Accurately align sheets and maintain uniform 3-inch minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure watertight installation.

1. When ambient and substrate temperatures range between 25 and 40 deg F, install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F.

E. One-Ply Application: Install sheets to form a membrane with lap widths of a uniform 3-inch (64-mm) minimum. Install additional 6-inch wide sheet strips over laps.

F. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.

G. Fold extended edges of pre-applied horizontal membranes vertically up foundation surfaces and seal with liquid flashing. Lap vertical membrane over folded portions of horizontal edges adhered to vertical face.

H. Seal edges of sheet-waterproofing terminations with liquid membrane.

I. Install sheet-waterproofing and auxiliary materials to tie into adjacent waterproofing.

J. Fold horizontal pre-applied membranes up vertical foundations. Lap vertical membrane over folded portions

K. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches beyond repaired areas in all directions.

L. Install protection course with butted joints adhered to waterproof membrane immediately after membrane installation.
3.4 INSULATION DRAINAGE BOARD INSTALLATION

A. Install insulation drainage board over protection course using membrane manufacturer's detail tape with drainage channels against membrane and arranged so channels align vertically to allow drainage. Do not block channels with tape, mastic, or liquid membrane.

B. Ensure that drainage channels are aligned and free of obstructions.

C. Before installing insulation on vertical walls with spread footings, install strips of molded-sheet drainage panel up wall a minimum of 8 inches at bottom of vertical wall at footing, then horizontally over footing, and down over edge of footing vertically another 4 inches to allow drainage and to prevent accumulation of water on top of footing.

D. Install one or more layers of board insulation to achieve required thickness over waterproofed surfaces. Cut and fit to within 3/4 inch of projections and penetrations and seal with liquid flashing.
   1. If more than one layer is required, use insulation adhesive as instructed by insulation manufacturer for below-grade application.

E. On vertical surfaces, set insulation units with tape applied according to manufacturer's written instructions.

3.5 MOLDED-SHEET DRAINAGE-PANEL INSTALLATION

A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesives or other methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
   1. For vertical applications with insulation, install molded-sheet drainage panels over insulation over protection course.
   2. For vertical applications without insulation, install molded-sheet drainage panels directly over protection course.

3.6 FIELD QUALITY CONTROL

A. Site Representative: Engage a site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish daily reports to Architect.

3.7 PROTECTION, REPAIR, AND CLEANING

A. Do not permit foot or vehicular traffic on unprotected membrane.

B. Protect waterproofing from damage and wear during remainder of construction period.

C. Protect installed insulation from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.8 BELOW-GRADE WATERPROOFING SCHEDULE

A. System A: Drainage panel over protection course over single layer modified bituminous sheet waterproofing over structural concrete foundation.

B. System B: Drainage panel over extrude polystyrene insulation board (XPS-1) over protection course over single layer modified bituminous sheet waterproofing over structural concrete foundation.

END OF SECTION
SECTION 071413 - HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Rubberized-asphalt waterproofing membrane for split-slab plaza deck paving.
   2. Electric field vector mapping (EFVM).

B. Related Requirements:
   1. Section 075556 “Fluid-Applied Protected Membrane Roofing” for roof waterproofing with pavers and pedestals.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

   1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, adhesion to contaminated substrate (e.g. concrete curing compounds and form release agents), substrate curing period weather related restrictions during installation, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs. The Contractor: Include the following activities:
      a. Before starting application of membrane waterproofing work, arrange a job-site meeting with the Architect, the Testing Agency and manufacturer representative to discuss the following:
         1) The waterproofing system, number of plies, termination and flashing requirements.
         2) Intermediate and final requirements of protecting the work.
         3) The different substrates that will receive the waterproofing and preparation requirements for each.
         4) Curing requirements for concrete.
         5) Concrete form release agent precautions.
         6) Adhering to coated surfaces, if applicable.
         7) Job specific recommendations on use of primers.
         8) Hot, cold and wet condition precautions.
         9) Scheduling and coordination with other construction, such as waterproofing overlaps that must be installed during construction of walls and footings both above and below grade.
         10) Protection of the work and repair procedures.
         11) Verify in writing to the District’s representative, that the contractor’s full time on site foreman and crew etc. (as required) are certified, or meet the requirements of the manufacturer of the waterproofing, as installers.
      b. Whenever the membrane waterproofing work is to be done, notify Testing Agency in sufficient time to arrange inspections.
      c. Provide safe access to the location of the Work for proper inspection.
      d. Post installation testing (e.g. Flood Testing or Electronic Field Vector Mapping.)
1.3 ACTION SUBMITTALS

A. Samples: For the following products:
   1. Waterproofing System, 8 by 8 inches, showing layering of membrane components
      (waterproofing membrane, reinforcing fabric, and protection course).
   2. Flashing sheet, and drainage panel, 8 by 8 inches.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by
   manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store liquid materials in their original undamaged containers in a clean, dry, protected location
   and within the temperature range required by waterproofing manufacturer.

B. Remove and replace liquid materials that cannot be applied within their stated shelf life.

C. Protect stored materials from direct sunlight.

1.6 FIELD CONDITIONS

A. Weather Limitations: Apply waterproofing within the range of ambient and substrate
   temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a
   damp or wet substrate, or when temperature is below zero deg F.
   1. Do not apply waterproofing in snow, rain, fog, or mist.

B. Maintain adequate ventilation during application and curing of waterproofing materials.

C. Compatibility:
   1. Where new work interfaces existing waterproofed construction, remove existing
      waterproofing as required to install new work. Interface new waterproofing with existing
      system to provide continuous system without leaks. Ensure compatibility of system
      materials.
   2. The waterproofing manufacturer shall submit a letter stating compatibility or concerns
      with existing, or adjacent, waterproofing.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace waterproofing and sheet flashings
   that do not comply with requirements or that fail to remain watertight within specified warranty
   period.
   1. Warranty includes removing and reinstalling protection course and drainage panels.
   2. Warranty Period: Five years from date of Substantial Completion.
PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain waterproofing materials insulation and from single source from single manufacturer.

2.2 WATERPROOFING MEMBRANE

A. Hot Fluid-Applied, Rubberized-Asphalt Waterproofing Membrane: Single component; 100 percent solids; hot fluid-applied, rubberized asphalt.

1. Basis-of-design Products: Subject to compliance with requirements, provide Monolithic Membrane 6125 as manufactured by American Hydrotech, Inc., or one of the following comparable products:
   a. Carlisle Coatings & Waterproofing Inc; CCW-500R.
   b. Henry Company; 790-11.
   c. Soprema, Inc.; Colphene H

2.3 AUXILIARY MATERIALS

A. General: Auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with waterproofing.

B. Primer: ASTM D 41/D 41M, asphaltic primer and surface conditioner.

C. Elastomeric Sheet: 50-mil- minimum, uncured sheet neoprene with manufacturer's recommended contact adhesives, if applicable, as follows:
   1. Tensile Strength: 1400 psi minimum; ASTM D 412, Die C.
   2. Elongation: 300 percent minimum; ASTM D 412.
   3. Tear Resistance: 125 psi minimum; ASTM D 624, Die C.

D. Sealants and Accessories: Manufacturer's recommended sealants and accessories.

E. Reinforcing Fabric: Manufacturer's recommended, neoprene or spun-bonded polyester fabric.

F. Liquid Flashing: Manufacturer's recommended, two-component, liquid applied resin membrane flashing system.

G. Adhesive: Manufacturer's recommended contact adhesive for bonding elastomeric flashing.

2.4 MOLDED-SHEET DRAINAGE PANELS

1. Compressive Strength: ASTM D 1621; Not less than 30000 psf
2. Flow Rate: ASTM D 4716; Not less than 7 gpm/ft. width
3. Products: Subject to compliance with requirements, provide the following, or comparable by selected product system manufacturer:
   a. American Hydrotech, Inc; Hydrodrain 300.
B. Protection Course:

1. Fiberglass reinforced rubberized asphalt sheet: Subject to compliance with requirements, provide the following, or comparable by selected product system manufacturer:
   a. American Hydrotech, Inc., Hydroflex 30

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
   1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
   2. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean and prepare substrates according to manufacturer’s written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.

B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

C. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.

D. Remove grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

E. Remove fins, ridges, and other projections, and fill honeycomb, aggregate pockets, and other voids.

3.3 JOINTS, CRACKS, AND TERMINATIONS

A. Prepare and treat substrates to receive waterproofing membrane, including joints and cracks, deck drains, corners, and penetrations according to manufacturer’s written instructions.
   1. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt according to ASTM D 4258.
   2. Adhere strip of elastomeric sheet to substrate in a layer of hot rubberized asphalt. Extend elastomeric sheet a minimum of 6 inches on each side of moving joints and cracks or joints and cracks exceeding 1/8 inch thick, and beyond deck drains and penetrations. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.
   3. Embed strip of reinforcing fabric into a layer of hot rubberized asphalt. Extend reinforcing fabric a minimum of 6 inches on each side of nonmoving joints and cracks not exceeding 1/8 inch thick, and beyond roof drains and penetrations.
a. Apply second layer of hot fluid-applied, rubberized asphalt over reinforcing fabric.

B. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet extended a minimum of 6 inches on each side of joints and adhere to substrates in a layer of hot rubberized asphalt. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

3.4 FLASHING INSTALLATION

A. Install elastomeric sheets at terminations of waterproofing membrane according to manufacturer's written instructions.

B. Prime substrate with asphalt primer/conditioner. Allow to thoroughly dry before application of membrane as instructed by membrane manufacturer.

C. Install elastomeric sheet and adhere to deck and wall substrates in a layer of hot rubberized asphalt.

D. Terminate flashing sheet at terminations and perimeter of waterproofing as instructed by manufacturer to suit condition

3.5 MEMBRANE APPLICATION

A. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow it to dry.

B. Heat and apply rubberized asphalt according to manufacturer's written instructions.
   1. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized asphalt.

C. Start application with manufacturer's authorized representative present.

D. Reinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to a thickness of 90 mils; embed reinforcing fabric, overlapping sheets 2 inches; spread another 125-mil-thick layer to provide a uniform, reinforced, seamless membrane 215 mils thick.

E. Apply waterproofing over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.

F. Cover waterproofing with protection course with overlapped joints using adhesive before membrane is subject to construction or vehicular traffic.

3.6 MOLDED-SHEET DRAINAGE PANEL INSTALLATION

A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate according to manufacturer's written instructions. Use methods that do not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.
3.7 FIELD QUALITY CONTROL

A. Site Representative: Engage a full-time site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions; surface preparation; and application of membrane, flashings, protection, and drainage components; furnish daily reports to Architect.

1. Site representative shall measure membrane thickness with pin tester or other suitable device at least once for every 100 sq. ft. and include measurements in reports.

B. Testing Agency: Engage a qualified testing agency to inspect substrate conditions, surface preparation, waterproofing application, protection, and drainage components, and to furnish reports to Architect.

C. Post Installation Testing: All horizontal waterproofed surfaces, except for slab-on-grade applications.

1. Electric Field Vector Mapping (EFVM): EFVM technician shall survey entire waterproofing area for potential leaks using EFVM.
   a. After installing horizontal membrane and before placing overburden or vegetated roof system. Provide testing to verify membrane is free of any holes, open seams, and/or capillary defects that will allow water to pass.
   b. Install a temporary leak detection system by one of the following or approved equal:
      1) Honza Group Incorporated, Columbia, Maryland; 301-953-7210
      2) International Leak Detection, Ltd, Ontario, Canada; 905-438-8283
      3) Vector Mapping IR Analyzers; 800-879-1964
      4) Other testing providers may be considered with approval of the membrane Manufacturer and Architect.
   c. Engage a company experienced in detecting breaches in the waterproofing using an electronic detection system.
   d. Installation of EFVM impulse conductor wire around perimeter of area to be tested.
      1) The testing agency will determine size and shape of area.
      2) The conductor wire will consist of braided interwoven strands of stainless steel wire.
   e. Place wire directly on membrane.
   f. Wet the test area with potable water sufficiently to create a continuous conducting “plate” above the membrane.
   g. The technician providing the EFVM testing shall provide a report of each day’s test results containing:
      1) Written description and photograph of all defects and any corrections made.
      2) A schematic drawing indicating location of stationary conductor wire and of any defects found in testing.
      3) Report shall be made in hard copy and submitted to the Architect and District.
   h. If breaches are discovered, repair the breach and retest the affected area. Repeat this process until no breach is detected.

2. Engage an independent testing agency to observe testing. If breaches are discovered, the independent testing agency shall observe repairs and retesting of discovered breaches.
3.8 CLEANING AND PROTECTION

A. Protect waterproofing from damage and wear during remainder of construction period.

B. Protect installed insulation from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION
SECTION 071619 - METAL OXIDE WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes metal-oxide waterproofing for negative-side application to concrete.

B. Related Requirements:
   1. Section 033000 "Cast-in-Place Concrete" for waterstops, and finishing concrete walls and slabs to receive waterproofing.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions and installation instructions for metal-oxide waterproofing.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

1.4 QUALITY ASSURANCE

A. Applicator Qualifications: A firm experienced in applying metal-oxide waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance, and that employs workers trained and approved by manufacturer.

B. Submit the following upon request:
   1. Qualification Data: For Applicator.
   2. Product Certificates: For waterproofing, patching, and plugging materials, from manufacturer.
   3. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for metal-oxide waterproofing.
   4. Field quality-control reports.

1.5 PROJECT CONDITIONS

A. Weather Limitations: Proceed with application only when existing and forecasted weather conditions permit metal-oxide waterproofing to be performed according to manufacturer's written instructions.
B. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.

C. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at 40 deg F or above during work and cure period, and space is well ventilated and kept free of water.

PART 2 - PRODUCTS

2.1 WATERPROOFING MATERIALS

A. Metal-Oxide Waterproofing Compound: A product specifically formulated for waterproofing concrete and masonry substrates; containing pulverized iron and a chemical oxidizing agent to cause the iron particles to rust and grow in size in the presence of water; with VOC content complying with limits of authorities having jurisdiction.

1. Products: Subject to compliance with requirements, provide one of the following:
   b. Metalcrete Industries; Metalcrete Waterproofing.
   c. Specco Industries, Inc.; Speccrete Metallic Waterproofer.

2.2 ACCESSORY MATERIALS

A. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.

B. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); compatible with substrate and other materials indicated; and VOC content complying with limits of authorities having jurisdiction.

C. Portland Cement: ASTM C 150, Type I.

D. Sand: ASTM C 144.

E. Water: Potable.

2.3 MIXES

A. Metal-Oxide Waterproofing Compound: Add metal oxide waterproofing components, pre mixed or field mixed, per manufacturer’s written instructions. Blend together with mechanical mixer or by hand to required consistency for each coat.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for suitable conditions where waterproofing is to be applied.

B. Proceed with application only after unsatisfactory conditions have been corrected.

C. Notify Architect in writing of active leaks or defects that would affect system performance.

3.2 PREPARATION

A. Protect other work from damage caused by cleaning, preparation, and application of waterproofing. Provide temporary enclosure[ to confine spraying operation and] to ensure adequate ambient temperatures and ventilation conditions for application.

B. Do not allow waterproofing, patching, and plugging materials to enter reveals or annular spaces intended for resilient sealants or gaskets, such as joint spaces between pipes and pipe sleeves.

C. Stop active water leaks with plugging compound according to waterproofing manufacturer's written instructions.

D. Repair damaged or unsatisfactory substrate with patching compound according to manufacturer's written instructions.
   1. At holes and cracks in substrate, remove loosened chips and cut reveal with sides perpendicular to surface, not tapered, and approximately 1 inch deep. Fill reveal with patching compound flush with surface.

E. Surface Preparation: Comply with waterproofing manufacturer's written instructions to remove efflorescence, chalk, dust, dirt, mortar spatter, grease, oils, paint, curing compounds, and form-release agents to ensure that waterproofing bonds to surfaces.
   1. Clean concrete surfaces according to ASTM D 4258.
      a. Mechanical abrading or abrasive-blast cleaning according to ASTM D 4259.

F. Comply with waterproofing manufacturer's written requirements, if any, regarding moisture content, moisture and RH testing, and remediation of moisture if required in concrete to ensure that waterproofing bonds to surfaces.

3.3 APPLICATION

A. General: Comply with waterproofing manufacturer's written instructions for application and curing.
   1. As recommended by the manufacturer, saturate surface with water and maintain in a damp condition until applying waterproofing. Remove standing water.
   2. Apply waterproofing to surfaces indicated on Drawings.
   3. Number of Metal-Oxide Coats: Three.
   4. Application Method: Brush apply the waterproofing, vigorously working first coat onto the substrate and forcing the material into surface voids. Brush each subsequent coat into full contact with previous coat.
5. Dampen surface between coats.
6. Allow each coat to cure before applying subsequent coats.

B. Curing: Moist-cure waterproofing per manufacturer's requirements after final coat has set, followed by air drying prior to being placed in service, unless otherwise recommended in writing by manufacturer.

C. Waterproofing Treatment Extensions: Extend waterproofing treatment as follows:
1. Onto every substrate in areas indicated for treatment, including pits, sumps and similar offsets and features.

3.4 FIELD QUALITY CONTROL

A. Inspection: Engage manufacturer's representative to inspect completed application and provide a written report that application complies with manufacturer's written instructions.

END OF SECTION
SECTION 072100 - THERMAL INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Rigid foam-plastic board insulation.
   2. Semi-rigid glass-fiber board insulation.
   5. Spray polyurethane foam insulation.
   6. Thermal spacers.

B. Related Requirements:
   1. Section 042113 "Brick Masonry" for installation in metal-framed assemblies of insulation specified by referencing this Section used as part of brick veneer wall assemblies.
   2. Section 061600 "Sheathing" for exterior wall sheathings and wall sheathing joint-and-penetration treatments.
   3. Section 071326 "Below-Grade Sheet Waterproofing" for insulation used in below-grade foundation waterproofing system.
   4. Section 072726 "Membrane Air Barriers" for water-resistive air barrier used as part of an approved NFPA 285 compliant wall assembly.
   5. Section 074213.23 "Metal Wall Panels" for installation in metal-framed assemblies of insulation specified by referencing this Section used as part of an approved NFPA 285 compliant wall assembly.
   6. Section 075419 "Polyvinyl-Chloride (PVC) Roofing" for insulation specified as part of roofing construction.
   7. Section 075556 "Fluid-Applied Protected Membrane Roofing" for insulation used in roof paving system.
   8. Section 078443 "Joint Firestopping and Firesafing" for insulation installed as part of a perimeter fire-resistive joint system.
   9. Section 092400 "Cement Plastering" for installation in metal-framed assemblies of insulation specified by referencing this Section used as part of an approved NFPA 285 compliant wall assembly.
   10. Section 098100 "Acoustical Insulation" for insulation for sound-rated partitions and ceilings.

1.2 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data and Samples submittal. Ensure compliance with requirements included in Division 01 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.
1.3 INFORMATIONAL SUBMITTALS

A. Certification: Manufacturer's certificate of compliance with NFPA 285 for each component.

B. Fire Test Reports: Test reports indicating use of each product as part of an NFPA 285 compliant assembly.

C. Research/Evaluation Reports: For foam-plastic insulation, from ICC-ES.

1.4 QUALITY ASSURANCE

A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

B. Provide the following upon request:
   1. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the Project site in their original containers or packages or bundles bearing label clearly identifying manufacturer's name, brand, grade, UL listing, and other pertinent information.

B. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

C. Protect foam-plastic board insulation as follows:
   1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
   2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site before installation time.
   3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.1 FIRE PERFORMANCE REQUIREMENTS

A. Fire Propagation Characteristics: Where indicated, insulation used in exterior wall assemblies and associated components shall have passed NFPA 285 testing as part of an approved assembly. Substitution of listed products, if approved by Architect as an equal, shall be with comparable products meeting same fire propagation requirements as a component in a listed assembly tested and approved by Underwriter Laboratories, Inc. or another third party testing agency acceptable to the governing authority. Engineering Judgments prepared by the manufacturer shall be preapproved by the authority having jurisdiction.
B. It is not the intention to preclude the use of other comparable products as approved by the Architect, as long as the product meets the criteria and complies with NFPA 285 as part of an approved assembly. Substitution requests shall include certification and technical data from the manufacturer indicating that the product has been tested and approved in a listed assembly. Components of an approved NFPA 285-compliant air-barrier assembly include the following:

1. Plaster Assembly: Water-resistant-barrier on exterior glass-mat-faced sheathing on metal studs, extruded polystyrene insulation drainage board, lath and minimum 3/4 inch thick cement plaster, similar or equal to UL EWS0027 or EWS0030.
2. Metal Wall Panel Assembly: Water-resistant-barrier on exterior glass-mat-faced sheathing on metal studs, mineral-wool cavity insulation board, noncombustible subframing, aluminum panel wall cladding, similar or equal to Intertek Design No. RI/MFF 30-01

2.2 FOAM-PLASTIC BOARD INSULATION

A. Drawing Keynote Type XPS: Extruded-Polystyrene Board Insulation, ASTM C 578 Type IV or better, of minimum compressive strength and properties indicated below; thickness and width indicated and manufacturer's standard length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Foamular 250 as manufactured by Owens Corning, or comparable by one of the following tested and approved products as part of an NFPA 285 compliant assembly:
   a. DiversiFoam Products.
   b. Dow Chemical Company (The).
   c. Kingspan GreenGaurd (formerly Pactiv Building Products).

2. Physical and Performance Properties: Comparable products meeting the following requirements may be approved by the Architect for use on the Project:
   a. Density: Not less than 1.55 pcf
   b. Compressive Strength: Not less than 25 psi.
   c. Thermal Resistance: R-Value of not less than 10 (deg. F.h.sf/Btu) for 2 inch thickness at 75 deg F mean temperature.

   1) It is not the intention to preclude the use of other comparable products as approved by the Architect, however, for substitution requests to be approved, the product must meet the above criteria. Substitution requests shall include certification and technical data from the manufacturer indicating that the product has been tested and approved in a listed NFPA-compliant assembly.

3. Application: Required for use as rigid substrate behind lath and plaster.

B. NFPA 285-Compliant Option to XPS: Molded-Polystyrene (Expanded) Board Insulation, ASTM C 578, Type II or better, of minimum compressive strength and properties indicated below; thickness and width indicated and manufacturer's standard length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Neopor GPS Plus as manufactured by Master Builders Solutions (formerly BASF), or comparable by one of the following tested and approved products as part of an NFPA 285 compliant assembly:
   a. DiversiFoam Products.
b. Insulfoam; Carlisle Construction Materials Company.

2. Physical and Performance Properties: Comparable products meeting the following requirements may be approved by the Architect for use on the Project:
   a. Density: Not less than 1.33 pcf
   b. Compressive Strength: Not less than 15 psi.
   c. Thermal Resistance: R-Value of not less than 8 (deg. F.h.sf/Btu) for 2 inch thickness at 75 deg F mean temperature.

1) It is not the intention to preclude the use of other comparable products as approved by the Architect, however, for substitution requests to be approved, the product must meet the above criteria. Substitution requests shall include certification and technical data from the manufacturer indicating that the product has been tested and approved in a listed NFPA-compliant assembly.

C. Drawing Keynote Type XPS-1: See below-grade waterproofing section.

D. Drawing Keynote Type XPS-2: See protected membrane roofing section for insulation under pavers.

2.3 GLASS-FIBER BOARD CURTAIN WALL INSULATION

A. Unfaced, Semi-Rigid Glass-Fiber Board Curtain-Wall Insulation: ASTM C 612, Type IA; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84.
   1. Nominal Density of 2.25 lb/cu. ft.
   2. Thermal Resistance: R-Value of 4.3 deg F x h x sq. ft./Btu per inch at 75 deg F.

2.4 MINERAL-WOOL BOARD INSULATION

A. Inorganic, Non-Combustible Mineral-Wool Rain Screen/Cavity Wall Insulation: Unfaced, ASTM C 612, Type IVB; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of zero and zero, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide CavityRock as manufactured by Rockwool (formerly Roxul, Inc.), or Architect approved equal by the following:
      a. Owens Corning
   2. Physical and Performance Properties: Comparable products meeting the following requirements may be approved by the Architect for use on the Project:
      a. Thermal Resistance: Of total thickness indicated based on the following per ASTM C 518:
         1) Thermal Resistivity: R-Value per inch at mean temperature of 75 deg F shall not be less than 4.3 (deg. F.h.sf/Btu).
      b. Density: ASTM C 303; Not less than 4.3 lb/cu. ft. for 2-inch thick board.
1) It is not the intention to preclude the use of other comparable products as approved by the Architect, however, for substitution requests to be approved, the product must meet the above criteria. Substitution requests shall include certification and technical data from the manufacturer indicating that the product has been tested and approved in a listed NFPA-compliant assembly.

3. Application: Required for use in exterior rain screen applications behind metal wall cladding with thermal spacers per Section 074213 and behind cement board thin brick substrate with thermal spacers per Section 042113.

2.5 MINERAL-WOOL BLANKET (BATT) INSULATION

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Fibrex Insulations Inc.
2. Owens Corning.
3. Roxul Inc.
4. Thermafiber.

B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 60 percent.

C. Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; thickness as indicated with width and length as required to suit job conditions; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

1. Minimum density of 0.6 lbs. per cubic foot.
2. Minimum thermal resistivity (R) of 3.1deg F x h x sq. ft./Btu x in. at mean temperature of 75 degrees F.

2.6 SPRAY POLYURETHANE FOAM INSULATION

A. PU-1: Closed-Cell Polyurethane Foam Insulation: ASTM C 1029, Type II, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. BASF Corporation.
   b. BaySystems NorthAmerica, LLC.
   c. Dow Chemical Company (The).
   d. Gaco Western Inc.
   e. Henry Company.

2. Minimum density of 1.5 lb/cu. ft., thermal resistivity of 6.2 deg F x h x sq. ft./Btu x in. at 75 deg F.
2.7 COMPOSITE FRAMING SUPPORT SYSTEM

A. Thermal Spacer Type: Thermally-broken, noncombustible composite fiberglass-reinforced polymer z-shaped girts with fully-engaged metal fastener inserts and integral compression seals.

B. Basis of Design Product: Subject to compliance with requirements, provide the following or Architect approved equal.
   1. Advanced Architectural Products; Smartci Greengirt

C. Girt Spacing: Comply with manufacturer's instructions to suit cladding panel sizes and configuration as indicated.

D. Fire Propagation Characteristics: Attachment system shall be tested and approved as part of an NFPA 285 compliant assembly.

E. Fasteners: Self-tapping screws.
   1. Fastener Spacing: Comply with manufacturer's written instructions, but no more than 16 inches on center.
   2. Embedment Depth: Comply with manufacturer's written instructions.
   3. Seal fastener penetrations to maintain air barrier integrity.

F. Attachment Accessories:
   1. Bracing, Furring, Bridging, Plates, and Clips: Formed sheet steel, thickness as necessary to meet structural requirements for special conditions encountered.

2.8 INSULATION FASTENERS AND ADHESIVE

A. Mechanically Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
      b. Gemco; Spindle Type.
   2. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
   3. Spindle: Corrosion-resistant coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.

B. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
      b. Gemco; Spindle Type.
   2. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
   3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.
C. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Gemco; 90-Degree Insulation Hangers.

2. Angle: Formed from 0.030-inch thick, perforated, galvanized carbon-steel sheet with each leg 2 inches square.

3. Spindle: Corrosion-resistant coated, low-carbon steel; fully annealed; 0.105 inch diameter; length to suit depth of insulation indicated.

D. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches square or in diameter.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. AGM Industries, Inc.; RC150.
   b. Gemco; Dome-Cap or R-150.

2. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in the following locations:
   a. Crawl spaces.
   b. Ceiling plenums.
   c. Attic spaces.
   d. Where indicated.

E. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, air barrier, fasteners, and substrates. When in contact with air barrier, provide adhesive and chemical compatible material that is acceptable by the air barrier manufacturer.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Dow Corning Corp.
   b. Momentive Performance Materials, Inc.
   c. Tremco Incorporated

2. Adhesion Strength: 15 lbf/sq. in. minimum.

F. Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multi-component urethane adhesive formulated to attach insulation to substrate.

1. Product with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

2. Adhesive shall be compatible with water-resistive barrier products installed over exterior sheathing.
PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances that are harmful to insulation or that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.

B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.

C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.3 INSTALLATION OF RAIN SCREEN/CAVITY-WALL INSULATION WITH COMPOSITE FRAMING SUPPORT SYSTEM

A. Install thermal spacers in accordance with manufacturer's installation instructions.

B. Fasten thermal spacers through sheathing directly into steel framing or reinforcing using low-profile 1/4 inch #14 fasteners, maximum 16 inches on center, of sufficient diameter and loading capacity for the application, utilizing the pre-drilled holes in the metal retention plates.
   1. Vertical Applications: Fasten composite girts vertically at each stud or into metal backing. Install girts plumb and properly spaced to ensure retention of mineral wool insulation. Adhesively attach insulation to substrate with vertical ribbons of insulation adhesive.
   2. Horizontal Applications: Install composite girts horizontally level and properly spaced over fiberglass shims to allow drainage behind girt. Fasten to each stud or into metal backing. Provide minimum 3/16 inch weep space without sealant at girt end butt connections.

C. Seal fastener penetrations in water-resistive barriers prior to installation of insulation boards.

D. Install system to fill-in exterior spaces without gaps or voids. Do not compress insulation panels.

E. Trim insulation neatly to fit spaces, and insulate miscellaneous gaps and voids.

F. Fit insulation with edges butted tightly. Fit insulation tightly between thermal spacers and around cladding attachments, penetrations, and other obstructions. Fill voids with spray-applied polyurethane foam sealant.

G. Ensure and verify permanent retention of continuous insulation prior to installing exterior cladding systems.
3.4 INSTALLATION OF RIGID BOARD INSULATION BEHIND PLASTER

A. Foam-Plastic Insulation: Adhesively attach to substrate with vertical ribbons of insulation adhesive. Fit insulation with edges butted tightly. Fit insulation tightly around cladding attachments, thermal spacers and other obstructions.

3.5 INSTALLATION OF BATT INSULATION FOR FRAMED CONSTRUCTION

A. Apply insulation units to substrates by method indicated, complying with manufacturer’s written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

B. Glass-Fiber or Mineral-Wool Blanket Insulation: Install in cavities formed by framing members according to the following requirements:

1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members and/or building construction with no gaps or voids.
3. Secure insulation blankets to framing members with fasteners as recommended by the insulation manufacturer.
4. Maintain 3-inch (76-mm) clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
5. Install eave ventilation troughs between roof framing members in insulated attic spaces at vented eaves.
6. For metal-framed wall cavities where cavity heights exceed 96 inches (2438 mm), support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
   a. Provide galvanized metal mesh as required to hold insulation blankets in place without sagging.

3.6 MISCELLANEOUS VOIDS

A. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials, matching adjacent insulation type where possible:

1. Unfaced glass-fiber blanket insulation. ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
2. Unfaced mineral-wool blanket insulation. ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
3. Glass-Fiber Loose-Fill Insulation: ASTM C 764, Type II; with maximum flame-spread and smoke-developed indexes of 5, per ASTM E 84. Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 lb/cu. ft. (40 kg/cu. m).
4. Spray Polyurethane Insulation: Apply according to manufacturer’s written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked.
3.7 INSTALLATION OF CURTAIN-WALL INSULATION

A. Install board insulation in curtain-wall construction where indicated on Drawings according to curtain-wall manufacturer's written instructions.

1. Hold insulation in place by securing metal clips and straps or integral pockets within window frames, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place without touching spandrel glass. Maintain cavity width of dimension indicated between insulation and glass.

2. Install insulation where it contacts perimeter fire-containment system to prevent insulation from bowing under pressure from perimeter fire-containment system.

3.8 PROTECTION

A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

3.9 INSULATION SCHEDULE

A. When not indicated on Drawings, the following shall perform as a general guideline for applications of different types of insulation:

2. Exterior Walls (Stud Wall Cavity): Unfaced, mineral wool blanket.
3. Exterior Walls (Rainscreen, with thermal spacers): Unfaced semi-rigid mineral wool board.
4. Exterior Walls (Concealed; Plaster): Unfaced rigid XPS board.
5. Voids, Penetrations, Gaps in Exterior Envelope: Spray Polyurethane Foam

END OF SECTION
SECTION 072726 - MEMBRANE AIR BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Fluid-applied, vapor-retarding membrane air barriers.
   3. Transition membranes.

B. Related Requirements:
   1. Section 042113 "Brick Masonry" for use of air barriers as part of masonry veneer wall cavity and thin brick assemblies.
   2. Section 061600 "Sheathing" for exterior wall sheathings and wall sheathing joint-and-penetration treatments.
   3. Section 072100 "Thermal Insulation" for insulation board used as part of an approved NFPA 285 compliant wall assembly.
   4. Section 074213.23 "Metal Wall Panels" for exterior cladding used as part of an approved NFPA 285 compliant wall assembly.
   5. Section 076200 "Sheet Metal Flashing and Trim" for high-temperature self-adhering membrane flashing and underlayment.
   6. Section 092400 "Cement Plastering" for lath and plaster used as part of an approved NFPA 285 compliant wall assembly.

1.3 DEFINITIONS

A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air and moisture. Also, known as water-resistive barrier (WRB).

B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.

C. Air-Barrier Assembly: The collection of air-barrier materials and accessory materials applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Include installers of other construction connecting to air barrier, including roofing, sheathing, waterproofing, sealants, plastering, metal wall cladding, glazed curtain walls, storefront windows, and door frames.
2. Review air barrier requirements including surface preparation, substrate condition and pretreatment, minimum substrate curing period, forecasted weather conditions, special details and sheet flashings, mockups, installation procedures, sequence of installation, testing and inspecting procedures, materials approved for use, compatibility of materials, coordination with installation of adjacent and covering materials, and protection and repairs.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of air barrier.
   1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.
   2. Submit letter from primary materials manufacturer indicating approval of products not manufactured by primary manufacturer.
   3. Include statement from manufacturer that product has been tested in an approved assembly and meets the requirements of NFPA 285.
   4. Include statement that materials are compatible with adjacent materials proposed for use.
   5. Submit reports indicating that field peel-adhesion test on all materials to which sealants are adhered have been performed and the changes made, if required, to other approved materials, in order to achieve successful adhesion.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For air-barrier assemblies.
   1. Show locations and extent of air barrier. Include project specific details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
   2. Include project specific details of interfaces with other materials that form part of air barrier.
   3. Include letter from manufacturer indicating that the project specific details and shop drawings have been reviewed and are approved for use.

D. Samples: Submit clearly labeled samples, 3 by 4 inch minimum size of each material specified.

1.6 INFORMATIONAL SUBMITTALS

A. Certification: Manufacturer's certificate of compliance with NFPA 285 for each component.

B. Fire Test Reports: Test reports indicating use of each product as part of an NFPA 285 compliant assembly.

C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

D. Field Test Results: Submit mockup and in-situ test results of air leakage test and water leakage test with specified standards, including retesting if initial results are not satisfactory.

E. Qualification Data: For Installer. Include list of ABAA-certified installers and supervisors employed by the Installer, who work on Project.
1. Provide evidence from the manufacturer that the firm is approved, authorized, or licensed to install the specified products and is eligible to receive manufacturer's special warranty.

2. Provide evidence that the installing firm is experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

3. Provide a manual that describes Installers and Manufacturers Quality Assurance / Quality Control program and procedures.

4. Submit evidence of current accreditation and certification under the Air Barrier Association of America’s (ABAA) Quality Assurance Program. Submit accreditation number of manufacturer and certification number of installers.

F. Product Certificates: From air-barrier manufacturer, certifying permanent chemical and adhesive compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier, and certifying that cleaning materials used during installation are chemically compatible with each of the adjacent materials proposed for use.

G. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

1.7 QUALITY ASSURANCE

A. Installer Qualifications:

1. A qualified firm that is approved, authorized, or licensed by the manufacturer to install manufacturer's product, that is eligible to receive manufacturer's special warranty, and is experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

2. A firm that is an ABAA-licensed contractor and employs certified and registered installers.

3. A firm that complies with ABAA's Quality Assurance Program.

4. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.

B. Manufacturer Qualifications: A qualified manufacturer regularly engaged in manufacturing air barrier membranes.

C. Quality Assurance / Quality Control Program:

1. Implement the ABAA Quality Assurance Program requirements. Cooperate with ABAA inspectors and independent testing and inspection agencies engaged by the District. Do not cover air barrier until it has been inspected, tested and accepted.

2. Daily Inspection:

   a. Visual inspection of the substrate prior to the application of membrane to confirm the substrate is in accordance with the manufacturer’s instructions.

   b. Visual inspection on the completed air barrier for that day and fix any deficiencies.

   c. Verification of manufactures specific Wet film thickness of installed work.

   d. Adhesion Test as indicated in Field Quality Control.

3. Daily Work Sheet: At a minimum include the following:

   a. Listing of installers

   b. Project name

   c. Type of air barrier installed

   d. Air barrier product name and lot/batch number

   e. Primer product name and lot/batch number
f. Substrate type

g. Substrate preparation required

h. Installation locations (gridlines, elevations, etc)

i. Results of visual inspection

j. Results of verification of wet film thickness, include photo documentation

k. Results of verification of adhesion testing, include photo documentation

4. Testing, Inspection, and Reporting as indicated in the Field Quality control.

D. Mockups: Before beginning installation of air barrier, build mockups to set quality standards for materials and execution and for preconstruction testing.

1. Build mockups of exterior wall assembly [as shown on Drawings] [150 sq. ft.] <Insert area or dimensions>, incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.

   a. Coordinate construction of mockups to permit inspection by District's testing agency of air barrier before external insulation and cladding are installed.

   b. Include junction with roofing vapor retarder, building corner condition, and below-grade waterproofing where applicable.

   c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: District will engage a qualified testing agency to perform preconstruction testing on field mockups.

B. Mockup Testing: Include air barrier assemblies in standalone exterior envelope mockup wall assemblies with preconstruction testing requirements. Air-barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency. In addition, provide the following:

   1. Adhesion Testing: Mockups will be tested for minimum air-barrier adhesion of 16 lbf/sq. in. or to manufacturer's minimum adhesion level per substrates, whichever is greater, according to ASTM D 4541.

      a. Test Locations: Perform 3 tests per substrate type.

C. Notify Architect 14 days in advance of the dates and times when mockups will be tested.

D. Preconstruction Sealant Testing: Submit samples of air barrier materials that will contact joint sealants, or materials that may be affected by joint sealants, to joint-sealant manufacturer. Joint-sealant manufacturer will test elastomeric sealants for adhesion to and compatibility with air barrier materials.

   1. Testing will not be required if data is submitted based on previous testing of current sealant products and air barrier materials matching those submitted.

   2. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
3. For materials failing tests, sealant manufacturer shall submit written instructions for corrective measures including the use of specially formulated primers.
4. Refer to Section 079000 "Joint Sealants" for further instructions and additional information.

E. DELIVERY, STORAGE, AND HANDLING

F. Remove and replace liquid materials that cannot be applied within their stated shelf life.

G. Protect stored materials from direct sunlight.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.
   1. Protect substrates from environmental conditions that affect air-barrier performance.
   2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

1.10 WARRANTY

A. Manufacturer's Warranty: Provide manufacturer's standard product warranty, for a minimum 10 years from date of Substantial Completion.

B. Special Installer's Warranty: Provide air barrier installer's 2 year warranty from date of Substantial Completion, including all components of the air barrier assembly, against failures including loss of air tight seal, loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly.

PART 2 - PRODUCTS

2.1 FIRE PERFORMANCE REQUIREMENTS

A. Fire Propagation Characteristics: Where indicated, water-resistive air barriers and associated components shall have passed NFPA 285 testing as part of an approved assembly. Substitution of listed products, if approved by Architect as an equal, shall be with comparable products meeting same fire propagation requirements as a component in a listed assembly tested and approved by Underwriter Laboratories, Inc. or another third party testing agency acceptable to the governing authority. Engineering Judgments prepared by the manufacturer shall be preapproved by the authority having jurisdiction.

B. It is not the intention to preclude the use of other comparable products as approved by the Architect, as long as the product meets the criteria and complies with NFPA 285 as part of an approved assembly. Substitution requests shall include certification and technical data from the manufacturer indicating that the product has been tested and approved in a listed assembly. Components of an approved NFPA 285-compliant air-barrier assembly include the following:
   1. Plaster Assembly: Water-resistive-barrier on exterior glass-mat-faced sheathing on metal studs, extruded polystyrene insulation drainage board, lath and minimum 3/4 inch thick cement plaster, equal to UL EWS0027 primary system or EWS0025 comparable system.
2. Metal Wall Panel Assembly: Water-resistive-barrier on exterior glass-mat-faced sheathing on metal studs, mineral-wool cavity insulation board, noncombustible subframing, aluminum panel wall cladding, similar or equal to Intertek Design No. RI/MFF 30-01.

2.2 GENERAL PERFORMANCE REQUIREMENTS

A. Air barrier shall be capable of performing as a continuous vapor-permeable air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

B. Provide an air barrier assembly that withstands combined positive and negative design wind, fan and stack pressures on the envelope without damage or displacement, that transfers the load to the structure, and that does not displace adjacent materials under full load. Join air barrier system materials in an airtight and flexible manner to adjacent assemblies, allowing for the relative movement of assemblies due to thermal and moisture variations and creep, and anticipated seismic movement.

2.3 FLUID-APPLIED MEMBRANE AIR BARRIER - PRIMARY MEMBRANE

A. Fluid-Applied, Vapor-Retarding Membrane Air Barrier, Type 1:

1. Basis-of-Design Product: Subject to compliance with requirements, provide ExoAir 130 as manufactured by Tremco Inc., or comparable of the following, or by Architect approved equal, as part of tested and approved NFPA 285 compliant assembly:
   a. Master Builders Solutions (formerly BASF); Senershield VB or Enershield
   b. GCP Applied Technologies (formerly Grace Construction Products; W.R. Grace & Co. ); Perm-A-Barrier NPL

2. Physical and Performance Properties: Comparable products meeting the following requirements may be approved by the Architect for use on the Project:
   b. Air Permeance (Air Leakage), Material: Maximum 0.0001 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (75 Pa) pressure difference; ASTM E 2178.
   c. Air-Barrier Assembly Air Leakage: Maximum 0.002 cfm/sq. ft. of surface area at 1.57 lb/sq. ft. (75 Pa) pressure difference; ASTM E 2357.
   d. Vapor Permeance: Maximum 0.1 perm; ASTM E 96/E 96M.
   e. Ultimate Elongation: Minimum 346 percent; ASTM D 412, Die C.
   f. In-Service Temperature: Not less than 180 deg F
   g. Adhesion: ASTM D4541; 16 psi on exterior sheathing.
   h. Nail Sealability: Pass; ASTM D 1970

3. Application: Use over exterior sheathing behind continuous insulation in the following locations:
   a. With composite support thermal spacer system in thin brick masonry applications.
   b. With composite support thermal spacer system in rainscreen metal wall panel cladding applications.
   c. In face brick veneer wall cavities.
2.4 SELF-ADHERED FLASHING MEMBRANE

A. Self-Adhered Flashing Membrane: Smooth surfaced, self-adhering composite membrane consisting of butyl-modified or rubberized asphalt adhesive laminated to a polyethylene-, polyolefin-, or polypropylene-film with release liner backing; specifically designed to withstand high temperatures beneath metal roofing, copings, flashings, and other non-roof detail areas. Provide primer according to written recommendations of underlayment manufacturer. Coordinate and ensure compatibility with, and adhesion to, adjacent materials.

1. Basis-of-Design Product: Subject to compliance with requirements, provide ExoAir 111 as manufactured by Tremco Inc., or comparable by the following, or by Architect approved equal, as compatible with primary air barrier membrane:
   b. GCP Applied Technologies (formerly Grace Construction Products; W.R. Grace & Co.).

2. Physical and Performance Properties:
   b. VOC: 0
   c. Air Permeance (Air Leakage), Material: Maximum 0.0001 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (75 Pa) pressure difference; ASTM E 2178.
   d. Ultimate Elongation: Minimum 600 percent; ASTM D 412, Die C.
   f. Lap Adhesion: Minimum 2 lbf; ASTM D 1876.

3. Application: Use over exterior sheathing behind continuous insulation with plaster assemblies.

2.5 ACCESSORY MATERIALS

A. General: Accessory materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier material.

B. Transition Membrane: Between Air Barrier Membrane and Other Adjacent Materials: Comply with both air barrier manufacturer’s recommendations and adjacent material manufacturer’s recommendations. Available products as follows as instructed by primary membrane manufacturer:

1. Liquid Flashing: Manufacturer’s standard trowel grade liquid flashing.

2. Butyl Strip: 30 to 40 mils thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of butyl adhesive with release liner backing.

3. Modified Bituminous Strip: 24 to 40 mils thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of rubberized asphalt adhesive with release liner backing.

4. High Temperature Modified Bituminous Strip: Refer to high temperature membrane specified above.
   a. For use under metal copings and flashings.

5. Foil Faced Modified Bituminous Strip: 40 mils thick, smooth surfaced, self-adhering flexible composite membrane flashing with an aluminum facer.

C. Primer: Liquid primer recommended for substrate by air-barrier material manufacturer.

D. Substrate-Patching Membrane: Manufacturer's standard trowel-grade substrate filler.

E. Adhesive and Tape: Air-barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.

F. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, 0.0187 inch thick, and Series 300 stainless-steel fasteners.

G. Sprayed Polyurethane Foam Sealant: One- or two-component, foamed-in-place, polyurethane foam sealant, not more than 2.3-lb/cu. ft density; flame-spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.

H. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 50, Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 079200 “Joint Sealants”. Sealant shall be approved for use with NFPA 285-compliant fire assembly.

I. Termination Mastic: Air-barrier manufacturer's standard cold fluid-applied elastomeric liquid; trowel grade.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that concrete has cured and aged for minimum time period recommended by air-barrier manufacturer.
3. Verify sealants used in sheathing are compatible with membrane proposed for use. Perform field peel-adhesion test on materials to which sealants are adhered.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.

B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
C. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.

D. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

E. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

F. Bridge and cover discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with overlapping transition membranes.

G. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

H. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

A. Gypsum Sheathing: Fill joints greater than 1/4 inch with sealant according to ASTM C 1193 and air-barrier manufacturer's written instructions. Apply first layer of fluid air-barrier material at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air-barrier material over joint reinforcing strip.

3.4 TRANSITION MEMBRANE INSTALLATION

A. General: Install transition membrane and accessory materials according to air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.

   1. Coordinate the installation of air barrier with installation of roofing membrane, below grade waterproofing, and base flashing to ensure continuity of air barrier with roofing membrane.

   2. Install manufacturer's recommended transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.

B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.

   1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

C. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials as recommended by manufacturer.

D. At end of each working day, seal top edge of transition membrane to substrate with termination mastic.
E. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

F. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Follow manufacturer's instructions and requirements of NFPA 285 for treatment of air-barrier membrane, transition membranes, and flashing at openings in exterior walls. Apply one of the following manufacturer instructed transition membranes so that a minimum of 3 inches of coverage is achieved over each substrate, unless otherwise indicated or required. Maintain 3 inches of full contact over firm bearing to perimeter frames with not less than 1 inch of full contact.
   1. Adhesive-Coated Transition Strip: Roll firmly to enhance adhesion.
   2. Elastomeric Flashing Sheet: Apply adhesive to wall, frame, and flashing sheet. Install flashing sheet and termination bars, fastened at 6 inches o.c. Apply lap sealant over exposed edges and on cavity side of flashing sheet.
   3. Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.

G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.

H. Seal transition membrane around masonry reinforcing or ties and penetrations with termination mastic.

I. Seal top of through-wall flashings to air barrier with an additional 6-inch-wide, transition membrane.

J. Seal exposed edges of transition membrane at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

K. Repair punctures, voids, and deficient lapped seams in transition membrane. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.

3.5 FLUID AIR-BARRIER MEMBRANE INSTALLATION

A. General: Apply fluid air-barrier material to form a seal with transition membrane and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions. Apply fluid air-barrier material within manufacturer's recommended application temperature ranges.
   1. Apply primer to substrates at required rate and allow it to dry.
   2. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.
   3. Prime glass-fiber-surfaces gypsum sheathing with number of prime coats as recommended by the manufacturer and as needed to achieve required bond, with adequate drying time between coats.

B. Membrane Air Barriers: Apply a continuous unbroken air-barrier membrane to substrates according to the following thickness. Apply air-barrier membrane in full contact around protrusions such as masonry ties.
   1. Apply to a total wet film thickness as required by the membrane manufacturer to meet the performance requirements indicated.

C. Apply transition membrane according to air-barrier manufacturer's written instructions.
D. Provide air barrier and accessories that are acceptable for use at horizontal surfaces without detrimental effects to material.

E. Do not cover air barrier until it has been tested and inspected by District's testing agency.

F. Seal penetrations in fluid-applied air barrier watertight, including penetrations caused by fastening of rainscreen support system brackets and girts prior to installation of wall cladding.

G. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.6 SELF-ADHERING SHEET AIR BARRIER INSTALLATION

A. General: Install modified bituminous sheets and accessory materials according to air-barrier manufacturer's written instructions and according to recommendations in ASTM D 6135.

1. When ambient and substrate temperatures, install self-adhering, modified bituminous air-barrier sheet produced for low-temperature application. Do not install low-temperature sheet if ambient or substrate temperature is higher than.

B. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D 6135.

1. Install modified bituminous strips centered over vertical inside corners. Install 3/4-inch fillets of termination mastic on horizontal inside corners.

C. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations with termination mastic and according to ASTM D 6135.

D. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier sheet on same day. Reprime areas exposed for more than 24 hours.

1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

E. Apply and firmly adhere modified bituminous sheets horizontally over area to receive air barrier. Accurately align sheets and maintain uniform 2-1/2-inch- (64-mm-) minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure airtight installation.

1. Apply sheets in a shingled manner to shed water without interception by any exposed sheet edges.
2. Roll sheets firmly to enhance adhesion to substrate.

F. Apply continuous modified bituminous sheets over modified bituminous strips bridging substrate cracks, construction, and contraction joints.

G. At end of each working day, seal top edge of air-barrier material to substrate with termination mastic.

H. Repair punctures, voids, and deficient lapped seams in air barrier. Slit and flatten fishmouths and blisters. Patch with air-barrier sheet extending 6 inches (150 mm) beyond repaired areas in all directions.

I. Apply transition membrane according to air-barrier manufacturer's written instructions.
J. For horizontal surfaces with slopes less than 1:12, use two layers of modified bituminous sheet. Stagger seams of first layer and second layer. Do not align seams of first ply with second ply. Apply sheets from low to high points of horizontal surface to ensure that laps shed water.

K. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.

L. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.7 FIELD QUALITY CONTROL

A. Manufacturer's Inspections: Arrange for air barrier system manufacturer's technical personnel to inspect installation weekly during periods of ongoing installation, and at completion of air barrier application.

B. District's Inspection and Testing: Cooperate with District's testing agency. Allow access to work areas and staging. Notify District's testing agency in writing of schedule for Work of this Section to allow sufficient time for testing and inspection. Daily inspection and testing may be required. Do not cover Work of this Section until testing and inspection is accepted.

C. District will engage a qualified testing agency to perform the following tests:

1. Water-Spray Test: After installation, test area of installed assembly as directed by Architect for water penetration according to AAMA 501.2.
   a. Field Tests: Test separately and as a component of field-quality control tests required by other Sections, including, but not necessarily limited to, cement plastering, exterior metal-composite-material wall panels, face brick masonry, and thin brick masonry veneer.
   b. Require manufacturer's technical personnel to attend testing procedures.
   c. Where air barrier is used as a water-resistive barrier in rainscreen applications, test before and after installation of wall cladding support system installation but prior to wall cladding installation.

2. Air Barrier Adhesion Testing: Test for minimum air-barrier adhesion of 16 lbf/sq. in. or to manufacturer's minimum adhesion level per substrates, whichever is greater, according to ASTM D 4541 for each 600 sq. ft. of installed air barrier or part thereof for each substrate.

D. Inspections: Air-barrier materials, accessories, and installation shall be inspected for compliance with the following requirements.

1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Air-barrier wet and dry film thicknesses.
3. Continuous structural support of air-barrier system has been provided.
4. Site conditions for application temperature and dryness of substrates have been maintained.
5. Maximum exposure time of materials to UV deterioration has not been exceeded.
6. Surfaces have been primed, if applicable.
7. Laps in transition membranes have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
8. Termination mastic has been applied on cut edges.
9. Transition membranes are firmly adhered to substrate.
10. Compatible materials have been used.
11. Transitions at changes in direction and structural support at gaps have been provided.
12. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.

13. Penetrations have been sealed.

E. Air barriers will be considered defective if they do not pass tests and inspections.
   1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
   2. Remove and replace deficient air-barrier components for retesting as specified above.
   3. Upon failure of testing:
      a. Repair and retest area.
      b. Provide an addition three tests for each occurrence of a failure.

F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

3.8 CLEANING AND PROTECTION

A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
   1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for longer than allowed by manufacturer, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.
   2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.

C. Remove masking materials after installation.

END OF SECTION
SECTION 074213 - METAL WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes metal composite material wall panel cladding system.

B. Related Requirements:
   1. Section 01030 "Alternates" for information effecting this Section.
   2. Section 061600 "Sheathing" for exterior wall sheathings and wall sheathing joint-and-penetration treatments.
   3. Section 072100 "Thermal Insulation" for insulation board and composite thermal spacer support system used as part of an approved NFPA 285 compliant wall assembly.
   4. Section 072726 "Membrane Air Barriers" for fluid-applied water-resistive air barrier used as part of an approved NFPA 285 compliant metal wall panel assembly.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Meet with District, Architect, District's insurer if applicable, metal composite material panel Installer, metal composite material panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal composite material panels, including installers of doors, windows, and louvers.
   2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   3. Review methods and procedures related to metal composite material panel installation, including manufacturer's written instructions.
   4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
   5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal composite material panels.
   6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
   7. Review temporary protection requirements for metal composite material panel assembly during and after installation.
   9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings:
   1. Include fabrication and installation layouts of metal composite material panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment assembly, trim, flashings, closures, and accessories; and special details.

D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.
   1. Metal Composite Material Panels: 12 inches long by actual panel width. Include fasteners, closures, and other metal composite material panel accessories.

E. Delegated-Design Submittal: For glazed aluminum curtain walls indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Certification: Manufacturer's certificate of compliance with NFPA 285 for each component.

B. Test Reports: Test reports indicating approval of each product as part of an NFPA 285 compliant assembly.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Product Test Reports: For each product, tests performed by a qualified testing agency.
   3. Field quality-control reports.

C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
   1. Build mockup of typical metal composite material panel assembly as shown on Drawings, including corner, soffits, supports, attachments, and accessories.
   2. Include as part of standalone exterior envelope mockup.
   3. Water-Spray Test: Conduct water-spray test of mockup of metal composite material panel assembly, testing for water penetration according to AAMA 501.2.
   4. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, metal composite material panels, and other manufactured items so as not to be damaged or deformed. Package metal composite material panels for protection during transportation and handling.
B. Unload, store, and erect metal composite material panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Stack metal composite material panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal composite material panels to ensure dryness, with positive slope for drainage of water. Do not store metal composite material panels in contact with other materials that might cause staining, denting, or other surface damage.

D. Retain strippable protective covering on metal composite material panels during installation.

1.8 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal composite material panels to be performed according to manufacturers' written instructions and warranty requirements.

1.9 COORDINATION

A. Coordinate metal composite material panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal composite material panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Structural failures including rupturing, cracking, or puncturing.
   b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal composite material panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
   a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
   b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
   c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.
PART 2 - PRODUCTS

2.1 FIRE PERFORMANCE REQUIREMENTS

A. Fire Propagation Characteristics: Where indicated, water-resistive air barriers and associated components shall have passed NFPA 285 testing as part of an approved assembly. Substitution of listed products, if approved by Architect as an equal, shall be with comparable products meeting same fire propagation requirements as a component in a listed assembly tested and approved by Underwriter Laboratories, Inc. or another third party testing agency acceptable to the governing authority. Engineering Judgments prepared by the manufacturer shall be preapproved by the authority having jurisdiction.

B. It is not the intention to preclude the use of other comparable products as approved by the Architect, as long as the product meets the criteria and complies with NFPA 285 as part of an approved assembly. Substitution requests shall include certification and technical data from the manufacturer indicating that the product has been tested and approved in a listed assembly. Components of an approved NFPA 285-compliant air-barrier assembly include the following:
   1. Metal Wall Panel Assembly: Water-resistive-barrier on exterior glass-mat-faced sheathing on metal studs, mineral-wool cavity insulation board, noncombustible subframing, aluminum panel wall cladding, similar or equal to Intertek Design No. RI/MFF 30-01.

C. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Indicate design designations from UL’s “Fire Resistance Directory” or from the listings of another qualified testing agency.

2.2 GENERAL PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide metal composite material panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 330:
   1. Wind and Seismic Loads: As indicated on Drawings.
   2. Other Design Loads: As indicated on Drawings.
   3. Deflection Limits: For wind loads, no greater than 1/180 of the span.
   4. Preload at +12.5 pounds per square foot.

B. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. when tested according to ASTM E 283 at the following test-pressure difference:
   1. Test-Pressure Difference: 1.57 lbf/sq. ft.

C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
   1. Test-Pressure Difference: 15 lbf/sq. ft.

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
2.3 METAL COMPOSITE MATERIAL WALL PANELS

A. Metal Composite Material Wall Panel Systems, General: Provide factory-formed and -assembled, metal composite material wall panels fabricated from two metal facings that are bonded to a solid, extruded thermoplastic core; formed into profile for installation method indicated. Include thermal spacer attachment assembly components, subframing, panel stiffeners, and accessories required for weathertight dry gasket sealed system.

1. Basis-of-Design Fabricators: Subject to compliance with requirements, provide Rout and Return Dry product system as manufactured by NOW Specialties, Inc, or comparable by one of the following listed system and fabricators for use in NFPA 285 compliant assembly.

B. Aluminum-Faced Composite Wall Panels: Formed with 0.020-inch- thick, coil-coated aluminum sheet facings.

1. Panel Products: Subject to compliance with requirements, provide one of the following panels for use in tested and approved NFPA 285 compliant system:
   a. Arconic (formerly Alcoa Architectural Products); Reynobond FR.
   b. Alcotex; Alcotex/FR.
   c. ALUCOBOND; 3A Composites USA, Inc.; Alucobond Plus.
   d. Mitsubishi Plastics Composites America, Inc.; Alpolic FR.

2. Panel Thickness: 4 mm.
3. Core: Fire retardant.
   a. Color: As selected by Architect from manufacturer's full range.

2.4 EXPOSED-FASTENER, LAP-SEAM METAL WALL PANELS

A. General: Provide factory-formed metal panels designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in sidelaps. Include accessories required for weathertight installation.

B. Alternates: Refer to Section 01030 "Alternates" for information effecting this Section.

C. Tapered-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, trapezoidal major ribs.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Model BR-28 as manufactured by Morin; a Kingspan Group company, or comparable product by one of the following:
   b. CENTRIA Architectural Systems.
   c. MBCI; a division of NCI Building Systems, L.P.

2. Aluminum Sheet: Coil-coated sheet, ASTM B 209, alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
   a. Thickness: 0.050 inch.
   b. Surface: Smooth, flat finish.
   d. Color: As selected by Architect from manufacturer's full range.
3. Major-Rib Spacing: Not less than 6 inches o.c.
5. Panel Height: 1.5 inches.
6. Sound-Absorbing Backing: K-Flex Duct Liner as manufactured by K-Flex, USA; 2 inch thick.

2.5 MISCELLANEOUS MATERIALS

A. Composite Support Framing System: Refer to Section 072100 "Thermal Insulation."

B. Weather-Resistive-Barrier (WRB): Fluid-applied air barrier complying with Section 072726 "Membrane Air Barriers" as part of NFPA 285 compliant assembly.

C. Continuous Rigid Insulation: Semi-rigid mineral wool board complying with Section 072100 "Thermal Insulation" as part of NFPA 285 compliant assembly.

D. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet ASTM A 653/A 653M, G90 coating designation or ASTM A 792/A 792M, Class AZ50 aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal composite material panel system.

E. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, Mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal composite material panels unless otherwise indicated.

F. Flashing and Trim: Provide flashing and trim formed from same material as metal composite material panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal composite material panels.

G. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal composite material panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.

H. Panel Sealants: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal composite material panels and remain weathertight; and as recommended in writing by metal composite material panel manufacturer.

2.6 FABRICATION

A. General: Fabricate and finish metal composite material panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

B. Fabricate metal composite material panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
C. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
4. Sealed Joints: Form non-expansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
   a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.7 FINISHES

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Aluminum Panels and Accessories:

1. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers’ written instructions.
2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

2.8 RAINSCREEN ATTACHMENT/THERMAL SPACER SUPPORT FRAMING SYSTEM

A. Basis of Design Product: Subject to compliance with requirements, provide Cascadia Clip as manufactured by Cascadia Windows Inc., or comparable by the following:

1. Advanced Architectural Products; Smartci Greengirt

B. Fire Propagation Characteristics: Attachment system shall be tested and approved as part of an NFPA 285 compliant assembly.

C. Sub-framing Thermal Spacer:

1. Noncombustible, glass fiber and thermoset polyester resin or glass fiber coated metal insulation clip.
2. Thermal spacer depth: 2 inches nominal.
   a. Depth tolerance: ± 0.005 inches.

D. Fasteners:
1. Sufficient length to provide solid attachment to structure as required by manufacturer
designed to withstand design loads.
2. Spacing and Embedment Depth: Comply with manufacturer's Professional Engineer's
project specific calculations.

E. Attachment Accessories:
1. Bracing, Furring, Bridging, Plates, and Clips: Formed sheet steel, thickness as necessary
to meet structural requirements for special conditions encountered.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with
requirements for installation tolerances, metal composite material panel supports, and other
conditions affecting performance of the Work.

1. Examine wall framing to verify that girts, angles, channels, studs, and other structural
panel support members and anchorages have been installed within alignment tolerances
required by metal composite material wall panel manufacturer.
2. Examine wall sheathing to verify that sheathing joints are supported by framing or
blocking and that installation is within flatness tolerances required by metal composite
material wall panel manufacturer.
   a. Verify that air- or water-resistant barriers have been installed over sheathing or
backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and assemblies penetrating metal composite material
panels to verify actual locations of penetrations relative to seam locations of metal composite
material panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Miscellaneous Supports: Install subframing, furring, thermal spacers, and other miscellaneous
panel support members and anchorages according to ASTM C 754 and metal composite
material panel manufacturer's written recommendations.

B. Sub-framing Thermal Spacer Installation: Install thermal spacers in accordance with spacer
manufacturer's written recommendations.
1. Completely install spacers, screws and sub-framing, and perform field-quality control
water spray test prior to installation of insulation.
   a. Once installation of thermal spacers has been tested and approved by metal panel
manufacturer, friction fit insulation in place before completing installation of z-girt
panel supports.
b. Ensure insulation is tightly fitted with sides of insulation slightly compressed at each insulation spacer. Ensure insulation pieces are in contact with no linear gaps between spacers.

2. Attach z-girts panel supports to thermal spacers.

3. METAL COMPOSITE MATERIAL PANEL INSTALLATION

A. General: Install metal composite material panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to supports unless otherwise indicated. Anchor metal composite material panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Shim or otherwise plumb substrates receiving metal composite material panels.
2. Flash and seal metal composite material panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal composite material panels are installed.
3. Install screw fasteners in predrilled holes.
4. Locate and space fastenings in uniform vertical and horizontal alignment.
5. Install flashing and trim as metal composite material panel work proceeds.
6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
7. Align bottoms of metal composite material panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.

B. Fasteners:

1. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.

C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal composite material panel manufacturer.

D. Attachment Assembly, General: Install attachment assembly required to support metal composite material wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.

1. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.
2. Install wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.
3. Ensure horizontal members have pre-formed or pre-drilled weep holes for drainage.

E. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal composite material panel assembly including trim, coping, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal composite material panel manufacturer; or, if not indicated, provide types recommended in writing by metal composite material panel manufacturer.
3.4 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal composite material wall panel units within installed tolerance of 1/4 inch in 20 feet, non-accumulative, on level, plumb, and location lines as indicated, and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: a qualified independent testing agency to perform field tests and inspections.

B. Water-Spray Test: Test area of assembly as directed by Architect for water penetration according to AAMA 501.2. Test assembly after installation of composite support system but prior to installation of wall panel in accordance with Section 072726 "Membrane Air Barriers." Testing of assembly after wall panel installation is not required.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal composite material wall panel installation, including accessories.

D. Metal composite material wall panels will be considered defective if they do not pass test and inspections.

E. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

F. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal composite material panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal composite material panel installation, clean finished surfaces as recommended by metal composite material panel manufacturer. Maintain in a clean condition during construction.

B. After metal composite material panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

C. Replace metal composite material panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION
SECTION 075419 - POLYVINYL-CHLORIDE (PVC) ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

   A. Section Includes:
      1. Mechanically-attached PVC membrane roofing system.
      2. Vapor retarder.
      3. Roof insulation.

   B. Related Requirements:
      1. Division 06 Section "Rough Carpentry " for wood nailers, curbs, and blocking.
      2. Division 07 Section "Sheet Metal Flashing and Trim" for metal roof penetration flashings, flashings, and counter-flashings.
      3. Division 07 Section "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.3 DEFINITIONS

   A. Roofing Terminology:  See ASTM D 1079 and glossary in NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.

1.4 ACTION SUBMITTALS

   A. Product Data:  For each type of product indicated.

   B. LEED Submittals in accordance with Section 018113 "Sustainable Design Requirements" applicable to this Section.

   C. Shop Drawings: For roofing system. Include plans, elevations, sections, project specific details, and attachments to other work.
      1. Base flashings and membrane terminations.
      2. Tapered insulation, including slopes.
      3. Roof plan showing orientation of steel roof deck and orientation of membrane roofing, fastening spacings and patterns for mechanically fastened membrane roofing.
      4. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.

   D. Samples for Verification:  For the following products:
      1. Sheet roofing, of color specified, including T-shaped side and end lap seam.
      2. Roof insulation.
      3. Metal termination bars.
1.5 INFORMATIONAL SUBMITTALS

A. Research/Evaluation Reports: For components of membrane roofing system, from the ICC-ES.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is UL listed for membrane roofing system identical to that used for this Project.

B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

C. Source Limitations: Obtain components including roof insulation fasteners for membrane roofing system as approved by membrane roofing manufacturer and testing.

D. Exterior Fire-Test Exposure: ASTM E 108, Class A; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.

E. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

F. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.

2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.

3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

4. Review deck substrate requirements for conditions and finishes, including flatness and fastening.

5. Review structural loading limitations of roof deck during and after roofing.

6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.

7. Review governing regulations and requirements for insurance and certificates if applicable.

8. Review temporary protection requirements for roofing system during and after installation.

9. Review roof observation and repair procedures after roofing installation.

G. Pre-installation Roofing Conference: Conduct conference at Project site.
1. Meet with Owner, Architect, Owner’s insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer’s representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.

2. Review methods and procedures related to roofing installation, including manufacturer’s written instructions.

3. Review and finalize construction schedule and verify availability of materials, Installer’s personnel, equipment, and facilities needed to make progress and avoid delays.

4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.

5. Review structural loading limitations of roof deck during and after roofing.

6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.

7. Review governing regulations and requirements for insurance and certificates if applicable.

8. Review temporary protection requirements for roofing system during and after installation.

9. Review roof observation and repair procedures after roofing installation.

H. Provide the following upon request:

1. Qualification Data: For qualified Installer and manufacturer.

2. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
   a. Submit evidence of compliance with performance requirements.

3. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of membrane roofing system.

4. Field quality-control reports.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer’s name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
   1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer’s written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.
1.9 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

A. Special Manufacturer System Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period.
   1. Special warranty includes membrane roofing, roof insulation, and roofing accessories provided by roofing manufacturer, including but not necessarily limited to base flashings, fasteners, adhesive and other components of membrane roofing system.
   2. Warranty Period: 20 years from date of Substantial Completion.

B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of membrane roofing system including, but not necessarily limited to, membrane roofing, base flashings and roof-related sheet metal work, roof insulation, fasteners, adhesives, seals and sealants, cover boards, nailers, canters and blocking, and walkway products, for the following warranty period:
   1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.

B. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.

C. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7 and the following criteria.
   1. Wind Speed: Refer to drawings.
   2. Exposure Condition: Refer to drawings.
   3. Importance Factor: Refer to drawings.

D. Solar Reflectance Index (SRI): Not less than 78 after 3 years when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

E. Energy Performance: Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.85 when tested according to CRRC-1.
2.2 PVC MEMBRANE ROOFING

A. PVC Sheet: ASTM D 4434, Type III, PVC membrane containing ultraviolet light stabilizers, flame retardant, with heat weldable seams, and polyester scrim reinforcement with a unique lacquer coating on the top surface.

1. Products: Subject to compliance with requirements, provide the following, or Architect approved equal by one of the other listed manufacturers:
   a. Sika Corporation; Sarnafil S327EnergySmart Roof Membrane.

2. Overall Thickness: 60 mils, minimum.

3. Exposed Face Color: Tan, initial solar reflectance of 0.73, emittance of 0.85, and solar reflective index (SRI) of 89.

4. Breaking Strength: ASTM D 751, not less than 305 lbf.

5. Tearing Resistance: ASTM D 1004, not less than 48 lbf.

6. Other Manufacturers: Subject to compliance with requirements, other available manufacturers offering similar products that may be incorporated into the Work include, the following:
   a. GAF Materials Corporation.
   b. Johns Manville.

2.3 AUXILIARY MEMBRANE ROOFING MATERIALS

A. General: Auxiliary membrane roofing materials recommended by roofing system manufacturer for intended use, and compatible with membrane roofing.

1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.

B. Attachment Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.

1. Concrete Deck: Sarnafil Sarnafastener-CD1

C. Membrane Attachment Component: Sarnafil Sarnadisc-XP or Sarnadisc-MAXLoad, unless otherwise indicated or required by manufacturer to meet performance requirements.

D. Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as PVC sheet membrane.

E. Bonding Adhesive: Manufacturer's standard water-based adhesive.

F. Slip Sheet: Manufacturer's standard, of thickness required for application.

G. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.

H. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

I. Reinforced Fluid Applied Flashing:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
a. Soprema; Alsan RS 230 Flash system.

2.4 VAPOR RETARDER

A. New Concrete Roof Deck Application:
   1. SBS Modified Bitumen: Basis of Design: Soprema; Sopralene 180 SP 3.5, torch-applied. Primer required.
   2. 2-ply Built-up Asphalt Roof:
      b. Roofing Asphalt: ASTM D 312, Type III or Type IV.

2.5 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured or approved by PVC membrane roofing manufacturer, of thicknesses indicated and that produce FM Approvals-approved roof insulation.

B. (PI-1) Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 2, Grade 2, coated glass-fiber mat facer on both major surfaces.
   1. Board Size: 4'-0" by 4'-0"
   2. Thickness: Two layers minimum, of total thickness required to provide a minimum aged thermal resistance of R30 (deg. F.h.sf/Btu).

C. Tapered Insulation: ASTM C 1289, Type II, Class 2, Grade 2, coated glass-fiber mat facer on both major surfaces. Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches unless otherwise indicated.

D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated. ASTM C 1289, Type II, Class 2, Grade 2, coated glass-fiber mat facer on both major surfaces.

2.6 INSULATION ACCESSORIES

A. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.

C. Bead-Applied Insulation Adhesive: Insulation manufacturer's recommended bead-applied, low-rise, one- or multi-component urethane adhesive formulated to attach roof insulation to substrate or to another insulation layer.

D. Cover Board: ASTM C 1177 C 1177M factory-primed glass-mat-faced gypsum sheathing, or ASTM C 1278 homogeneous fiber-reinforced gypsum sheathing, 1/4 inch thick, minimum.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Georgia-Pacific Corporation; Dens Deck Prime Prime Roof Board.
      b. USG Corporation; Securock Brand Gypsum Fiber Roof Board.
2. Mold Resistance: Score of 10 as rated according to ASTM D 3273.

2.7 ASPHALT MATERIALS
   A. Roofing Asphalt: ASTM D 312, Type III or Type IV.
   B. Asphalt Primer: ASTM D 41.

2.8 WALKWAYS
   A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch thick, and acceptable to membrane roofing system manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION
   A. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
      1. Verify that roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.
      2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
      3. Verify that concrete has cured and aged for minimum time period required in writing by roofing manufacturer. Perform testing as required by roofing manufacturer for test type, rate, and quantity to validate that substrate is acceptable, dry, and free of moisture.
      4. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.
   B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION
   A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
   B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.
   C. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
3.3 **VAPOR-RETARDER INSTALLATION**

A. New Concrete Roof Deck Application:
   1. **SBS Modified Bitumen**: Torch apply 1 ply of SBS modified bitumen vapor retarder according to manufacturer’s written instructions and applicable recommendations in ARMA/NRCA’s “Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing.”
   2. **Built-up Vapor Retarder**:
      a. Prime surface of concrete deck with asphalt primer at rate of 3/4 gal./100 sq. ft. or as required by manufacturer and allow primer to dry.
      b. Install two glass-fiber felt plies lapping each felt 19 inches over preceding felt.
      c. Embed each felt in a solid mopping of hot roofing asphalt.
      d. Glaze coat completed surface with hot roofing asphalt.
      e. Apply hot roofing asphalt within plus or minus 25 deg F of equiviscous temperature.

B. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

C. Provide an air tight transition to the wall air barrier.

3.4 **INSULATION INSTALLATION**

A. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.

B. Comply with membrane roofing system and insulation manufacturer’s written instructions for installing roof insulation.

C. Install tapered insulation under area of roofing to conform to slopes indicated.

D. Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.

E. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.

F. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation.
   1. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.

G. Mechanically Fastened and Adhered Insulation: Install each layer of insulation and secure first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
   1. Fasten first layer of insulation according to requirements in FM Approvals’ "RoofNav” for specified Windstorm Resistance Classification.
   2. Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
   3. Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
H. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction. Loosely butt cover boards together and fasten through insulation to roof deck.

1. Set cover board in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining cover board in place.

3.5 MECHANICALLY FASTENED MEMBRANE ROOFING INSTALLATION

A. Mechanically fasten membrane roofing over area to receive roofing and install according to roofing system manufacturer's written instructions.

1. Install sheet according to ASTM D 5082.
2. For in-splice attachment, install membranes roofing with long dimension perpendicular to steel roof deck flutes.

B. Start installation of membrane roofing in presence of roofing system manufacturer's technical personnel.

C. Accurately align membrane roofing and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

D. Mechanically fasten membrane roofing securely at terminations, penetrations, and perimeter of roofing.

E. Apply membrane roofing with side laps shingled with slope of roof deck where possible.

F. Seams: Clean seam areas, overlap membrane roofing, and hot-air weld side and end laps of membrane roofing and sheet flashings according to manufacturer's written instructions to ensure a watertight seam installation.

1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of sheet membrane.
2. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
3. Repair tears, voids, and lapped seams in roofing that does not comply with requirements.

G. Spread sealant bed over deck drain flange at roof drains and securely seal membrane roofing in place with clamping ring.

H. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weather-tightness of transition.

3.6 BASE FLASHING INSTALLATION

A. Install sheet flashings and preformed flashing accessories and adhere to substrates according to membrane roofing system manufacturer's written instructions.

B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply to seam area of flashing.

C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.

D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.7 WALKWAY INSTALLATION

A. Flexible Walkways: Install walkway products in locations indicated. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.8 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.

C. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.

D. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.9 PROTECTING AND CLEANING

A. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Correct deficiencies in or remove membrane roofing system that does not comply with requirements; repair substrates; and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

Roof System Special Warranty Form follows.
ROOF SYSTEM SPECIAL PROJECT WARRANTY FORM

Project Title: Contra Costa College New Science Building
Owner: Contra Costa Community College District
Architect's Project No. 10418.000
Contractor's Job Number: ___________

Specification Section No. and Title: Section 075419 - Polyvinyl-Chloride (PVC) Roofing.
Warranted Work: Entire low-slope PVC roofing system.

Warranty shall cover the Work of this Section, including all components of membrane roofing system including, but not necessarily limited to, membrane roofing, base flashings and roof-related sheet metal work, roof insulation, fasteners, adhesives, seals and sealants, cover boards, nailers, cants, and blocking, and walkway products.

Length of Warranty: Two (2) years from date of Substantial Completion.

The undersigned herewith warrant that the above stated Work has been executed in conformance with the requirements of the Contract Documents for the Project named and warrant said Work to perform as specified and without failure for the above stated period of time, starting on ________, 20__, and ending on ________, 20___. This warranty does not apply to failure to perform due to abuse or neglect by the Owner, or the Owner's successor in interest, or damage by vandalism.

END OF SPECIAL PROJECT WARRANTY FORM
SECTION 075556 - FLUID-APPLIED PROTECTED MEMBRANE ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Reinforced, hot fluid-applied protected membrane roof waterproofing.
3. Insulation.
4. Pavers supported on pedestals.
5. Electric field vector mapping (EFVM)

B. Related Requirements:
1. Section 01030 "Alternates" for information effecting this Section.
2. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
3. Section 075423 "Thermoplastic Polyolefin (TPO) Roofing" for transition to single-ply membrane roofing.
4. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
5. Division 22 "Storm Drainage Piping Specialties" for roof drains.

1.2 DEFINITIONS

A. Roofing Terminology: See ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site.
1. Meet with District, Architect, District's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review substrate requirements for conditions and finishes, including flatness.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing during and after installation.
9. Review roof observation and repair procedures after roofing installation.
1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For roofing system. Include plans, elevations, sections, details, and attachments to other work.
   1. Base flashings and membrane terminations.
   2. Tapered insulation, including slopes.
   3. Crickets, saddles, and tapered edge strips, including slopes.

D. Samples for Verification: For the following products:
   1. Roof insulation.
   2. Roof paver and pedestal, full sized, in each color and texture required.

1.5 INFORMATIONAL SUBMITTALS

A. Research/Evaluation Reports: For components of membrane roofing system, from the ICC-ES.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is UL listed for membrane roofing system identical to that used for this Project.

B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

C. Source Limitations: Obtain components including roof insulation and fasteners for membrane roofing system from same manufacturer as membrane roofing or approved by membrane roofing manufacturer.

D. Exterior Fire-Test Exposure: ASTM E 108, Class A; for application and roof slopes indicated, as determined by testing identical membrane roofing materials by a qualified testing agency. Materials shall be identified with appropriate markings of applicable testing agency.

E. Fire-Resistance Ratings: Where indicated, provide fire-resistance-rated roof assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

F. Mockups: Install roofing on 100 sq. ft. of deck to demonstrate surface preparation, joint and crack treatment, thickness of roofing, and execution quality. Install insulation and roof pavers over roofing membrane.
   1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
G. Provide the following upon request:

1. Qualification Data: For qualified installer and manufacturer.
2. Manufacturer Certificates: Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
   a. Submit evidence of compliance with performance requirements.
3. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of membrane roofing system.
4. Field quality control reports.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing manufacturer. Protect stored liquid material from direct sunlight.
   1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

1.9 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
   1. Warranty includes fluid-applied protected membrane roofing, base flashings, roof insulation, protection boards, drainage panels, filter fabric, fasteners and adhesive, and other components of protected membrane roofing system.
   2. Warranty Period: 15 years from date of Substantial Completion.

B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering Work of this Section, including all components of fluid-applied protected membrane roofing system such as roofing membrane, base flashings, roof insulation, protection boards, drainage panels, filter fabric, pavers and pedestals, fasteners and adhesive, and other components of protected membrane roofing system for the following warranty period:
1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain roofing materials, sheet flashings, drainage sheets, protection sheets, and auxiliary materials from single source from the primary membrane manufacturer to ensure total system compatibility and integrity.

2.2 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.

1. Accelerated Weathering: Roofing system shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.

2. Impact Resistance: Roofing system shall resist impact damage when tested according to ASTM D 3746 or ASTM D 4272.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.

C. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.

D. Energy Performance: Roofing system shall have an initial solar reflectance not less than 0.70 and an emissivity of not less than 0.75 when tested according to CRRC-1.

E. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2.3 ROOFING MEMBRANE

A. Hot Fluid-Applied, Rubberized-Asphalt Roofing Membrane: Single component; 100 percent solids; hot fluid-applied, rubberized asphalt.

1. Basis-of-Design Product: Subject to compliance with requirements, provide American Hydrotech, Inc.; Monolithic Membrane 6125, or a comparable product by one of the following:

   a. Carlisle Coatings & Waterproofing Inc.
   b. CETCO, a Minerals Technologies company.
   c. Tremco Incorporated.

2. Recycled Content: Not less than 40 percent post-consumer.

3. Water Vapor Permeability: ASTM E-96, Procedure E; 0.027 perms

4. Elongation: ASTM D 5329; 1000 percent
6. Thickness: Total, including reinforcing: 215 mils

2.4 BASE FLASHING SHEET MATERIALS

A. Elastomeric Flashing Sheet: 60-mil-thick, minimum, uncured sheet neoprene with manufacturer's recommended contact adhesives as follows:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following, or Architect approved equal by listed manufacturer.
      a. American Hydrotech, Inc., Flex Flash UN

2.5 AUXILIARY ROOFING MEMBRANE MATERIALS

A. General: Auxiliary materials recommended by roofing manufacturer for intended use and compatible with roofing membrane.
   1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.
   2. Recycle Content: Minimum 40 percent.

B. Surface Conditioner: Asphaltic surface conditioner for concrete surfaces.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following, or Architect approved equal by listed manufacturer.
      a. American Hydrotech, Inc., Surface Conditioner

C. Metal Termination Bars: Manufacturer's standard, predrilled, stainless-steel or aluminum termination bars, approximately 1 by 1/8 inch thick; with stainless-steel anchors.

D. Reinforcing Fabric: Manufacturer's standard duty, spun-bonded polyester fabric
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following, or Architect approved equal by listed manufacturer.
      a. American Hydrotech, Inc.; Flex Flash F.

2.6 SEPARATION/PROTECTION COURSE

A. Separation Sheet/Protection Course: Manufacturer's standard, specially formulated heavy duty, modified-asphalt protection sheet with synthetic fiber reinforcement.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following, or Architect approved equal by listed manufacturer:
   2. Thickness: 85 mils

2.7 MOLDED-SHEET DRAINAGE PANELS

A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Composite drainage system consisting of a three-dimensional, crush-proof, drainage core and a filter fabric meeting the following physical properties.
1. Basis-of-Design Product: Subject to compliance with requirements, provide the following, or Architect approved equal by listed manufacturer:
   a. American Hydrotech, Inc; Hydrodrain 1000.

2. Thickness: 0.25 inch
3. Compressive Strength: ASTM D 1621; 40,000 psf
4. Flow: ASTM D 4716; 8.5 gal/min/ft.

2.8 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated.

B. Extruded-Polystyrene Board Insulation, Type XPS-4: ASTM C 578, Type VII, unfaced; fabricated with shiplap or channel edges and with one face having grooved drainage channels; thickness and width indicated, and manufacturer's standard length as required to suit job conditions.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. DiversiFoam Products.
   b. Kingspan Greenguard.

2. Minimum compressive strength: ASTM D 1621, 60 psi
3. Minimum R-Value: 5.0 per inch

C. Adhesive for Bonding Insulation: Product with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

2.9 INSULATION ACCESSORIES

A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with membrane roofing.

B. Protection Mat/Filter Fabric: Woven or nonwoven polymeric fabric, water permeable and resistant to UV degradation, type and weight as recommended by roofing system manufacturer for application.

2.10 ROOF PAVERS

A. Roof Pavers:Heavyweight, hydraulically pressed, concrete units, [square edged], factory cast for use as roof pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following as selected by Architect:
   a. American Hydrotech, Inc., Architectural Pavers
   b. Hanover Architectural Products.
   c. Wausau Tile Inc.
   d. Hastings Pavement Company, LLC.
   e. Roofblok Limited.
f. Sunny Brook Pressed Concrete Co.

2. Thickness: Not less than 1-3/4 inches.
3. Size: 24 by 24 inches as selected by Architect. Manufacture pavers to dimensional tolerances of plus or minus 1/16 inch in length, height, and thickness.
4. Compressive Strength: 8500 psi, minimum; ASTM C 140.
5. Colors and Textures: As selected by Architect from manufacturer's full range.

B. Paver Supports/Pedestals: High-density polypropylene paver support assembly, including adjustable pedestals, shims, and spacer tabs for joint spacing of 3/16 inch.

1. Manufacturers: Subject to compliance with requirements, provide the following, or Architect approved equal by paver manufacturer:
   a. Bison Innovative Products; Model #LC-316.
2. Adjustable Range: 2-inch to 4-3/4-inch
3. Couplers: Adjustable up to 4-inches
4. Shims: 1/16-inch flexible and 1/8-inch rigid as required.
5. Base Leveler: Bison #LD4
6. Floating Insulation Base: Bison #FIB; 12- by 12-inch

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 JOINTS, CRACKS, AND TERMINATIONS

A. Prepare and treat substrates to receive roofing, including joints and cracks, roof drains, and penetrations, according roofing system manufacturer’s written instructions.

3.3 BASE FLASHING INSTALLATION

A. Install base flashing at terminations of roofing according to manufacturer's written instructions.

B. Bond elastomeric flashing sheet in contact adhesive against wall substrate to within 3 inches of deck. Adhere remaining vertical leg and horizontal leg of flashing sheet in a layer of hot fluid-applied, rubberized asphalt.

C. Extend flashing sheet up walls or parapets a minimum of 8 inches above insulation and 6 inches onto roof deck.

D. Install termination bars and mechanically fasten to top of flashing sheet at terminations and perimeter of roofing.
3.4 ROOFING MEMBRANE APPLICATION

A. Apply surface conditioner, at manufacturer's recommended rate, over prepared substrate and allow to dry.

B. Heat and apply rubberized asphalt according to manufacturer's written instructions.

C. Start application with manufacturer's authorized representative present.

D. Reinforced Membrane: Apply hot fluid-applied, rubberized asphalt to area to receive roofing. Spread a 90-mil-thick layer of hot fluid-applied, rubberized asphalt; embed reinforcing fabric, overlapping sheets 2 inches; spread another 125-mil-thick layer of hot fluid-applied, rubberized asphalt to form a uniform, reinforced, seamless membrane, 215 mils thick.

E. Cover membrane with protection course with overlapped joints before membrane is subject to construction traffic.

F. Loosely lay molded-sheet drainage panel over separation/protection course in accordance with manufacturer's instructions.

3.5 INSULATION INSTALLATION

A. Loosely lay board insulation units over drainage panel and roofing membrane, with drainage channels of insulation in continuous straight lines in the direction of slope to allow drainage and with end joints staggered between rows. Abut edges and ends between units.

3.6 ROOF-PAVER INSTALLATION

A. Install roof pavers on pedestals set according to pedestal manufacturer's written instructions.

B. Secure corners and perimeter with metal straps or other devices as instructed by paver manufacturer.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: District will engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.

1. Electric Field Vector Mapping (EFVM): Testing agency shall survey entire roof area for potential leaks using EFVM.

B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.

1. Notify Architect and District 48 hours in advance of date and time of inspection.
3.8 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

Special Roof System Warranty follows.

PROTECTED MEMBRANE ROOF SYSTEM WARRANTY FORM

WHEREAS ___________________________ of ___________________________, herein called the "Protected Membrane Roofing Installer," has performed roofing and associated work ("Work") on the following project:

1. Owner: Contra Costa Community College District.
2. Building Name/Type: Contra Costa College New Science Building.
4. Acceptance Date: ________________.
5. Warranty Period: Two years from Date of Substantial Completion.
6. Expiration Date: ___________________.

AND WHEREAS Protected Membrane Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

NOW THEREFORE Protected Membrane Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

This Warranty is made subject to the following terms and conditions:

Work includes: All components of fluid-applied protected roofing system such as roofing membrane, base flashings, roof insulation, protection boards, drainage panels, filter fabric, pavers and pedestals, fasteners and adhesive, and other components of protected membrane roofing system.

Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:

a. lightning;
b. fire;
c. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
d. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
e. vapor condensation on bottom of roofing; and
f. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.
When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Protected Membrane Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.

Protected Membrane Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.

During Warranty Period, if Owner allows alteration of work by anyone other than Protected Membrane Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Protected Membrane Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.

During Warranty Period, if original use of roof is changed and it becomes used for, other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.

Owner shall promptly notify Protected Membrane Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.

This Warranty is recognized to be the only warranty of Protected Membrane Roofing Installer on said Work, unless otherwise indicated, and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Protected Membrane Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner’s General Contractor.

IN WITNESS THEREOF, this instrument has been duly executed this _____ day of ______________, ____________.

Authorized Signature: _______________________________________.

Name: _______________________________________.

Title: _______________________________________.

END OF WARRANTY FORM
SECTION 076200 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Manufactured through-wall flashing with snaplock receiver.
   2. Manufactured reglets with counter flashing.
   3. Formed roof-drainage sheet metal fabrications.
   5. Formed wall sheet metal fabrications.
   6. Formed equipment support flashing.
   7. High-Temperature Underlayment.

B. Related Requirements:
   1. Section 061000 "Rough Carpentry" for wood nailers, curbs, and blocking.
   2. Section 077100 "Roof Specialties" for pre-manufactured sheet metal copings.
   3. Section 077200 "Roof Accessories" for set-on-type curbs, equipment supports, and other manufactured roof accessory units.
   4. Section 079513.16 "Exterior Expansion Joint Cover Assemblies" for manufactured expansion-joint cover assemblies for exterior building walls.

1.3 COORDINATION

A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.

B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   2. Review special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
   3. Review requirements for insurance and certificates if applicable.
   4. Review sheet metal flashing observation and repair procedures after flashing installation.
1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For sheet metal flashing and trim.
   1. Include plans, elevations, sections, and attachment details.
   2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work.
   3. Include identification of material, thickness, weight, and finish for each item and location in Project.
   4. Include details for forming, including profiles, shapes, seams, and dimensions.
   5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
   6. Include details of termination points and assemblies.
   7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
   8. Include details of roof-penetration flashing.
   9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
  10. Include details of special conditions.
  11. Include details of connections to adjoining work.

D. Samples for Verification: For each type of exposed finish.
   1. Sheet Metal Flashing: 12 inches long by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
   2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 inches long and in required profile. Include fasteners and other exposed accessories.
   3. Unit-Type Accessories and Miscellaneous Materials: Full-size Sample.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sheet metal flashing and trim, and its accessories, to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
   1. For flashings that are SPRI ES-1 tested, shop shall be listed as able to fabricate required details as tested and approved.

B. Provide the following upon request:
   1. Qualification Data: For fabricator.
   2. Product Certificates: For each type of flashing that is SPRI ES-1 tested.
3. Product Test Reports: For each product, for tests performed by a qualified testing agency.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
   1. Include typical roof edge flashings as part of exterior project mockup, including supporting construction cleats, seams, attachments, underlayment, and accessories.
   2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.

B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

1.9 WARRANTY

A. Special Warranty on Finishes: Manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
      a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
      b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
      c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
   2. Finish Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA’s "The NRCA Roofing Manual" and SMACNA’s "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. SPRI Wind Design Standard: Manufacture and install roof edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressure:
   1. Design Pressure: As indicated on Drawings.
D. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 SHEET METALS

A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.

B. Aluminum Sheet: ASTM B 209, alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with smooth, flat surface.
   1. Exposed Coil-Coated Finish:
      a. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   2. Color: As selected by Architect from manufacturer's full range.
   3. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.

C. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304, dead soft, fully annealed; with smooth, flat surface.
   1. Finish: 2D (dull, cold rolled).

D. Metallic-Coated Steel Sheet: Provide zinc-coated (galvanized) steel sheet according to ASTM A 653/A 653M, G90 coating designation or aluminum-zinc alloy-coated steel sheet according to ASTM A 792/A 792M, Class AZ50 coating designation, Grade 40; prepainted by coil-coating process to comply with ASTM A 755/A 755M.
   1. Surface: Smooth, flat.
   2. Exposed Coil-Coated Finish:
      a. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   3. Color: As selected by Architect from manufacturer's full range.
   4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.

2.3 UNDERLAYMENT MATERIALS

A. Felt: ASTM D 226/D 226M, Type II (No. 30), asphalt-saturated organic felt; nonperforated.
B. Self-Adhering, High-Temperature Sheet: 40 mils thick, smooth surfaced, self-adhering composite membrane consisting of 36 mils of butyl-modified or rubberized asphalt adhesive laminated to a 4-mil thick polyethylene-, polyolefin-, or polypropylene-film with release liner backing; specifically designed to withstand high temperatures beneath metal roofing, copings, flashings, and other non-roof detail area. Provide primer according to written recommendations of underlayment manufacturer. Coordinate and ensure compatibility with, and adhesion to, adjacent materials.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Carlisle Coatings & Waterproofing Inc., Carlisle Syntec; CCW WIP 300HT.
   b. GCP Applied Technologies (formerly Grace Construction Products; W.R. Grace & Co.); Grace Ice and Water Shield HT.
   c. Henry Company; Blueskin PE200 HT.
   d. Drexel Metals (formerly Metal-Fab Manufacturing, LLC); MetShield High-Temp Underlayment.
   e. Protecto Wrap Company; Protecto Jiffy Seal Ice & Water Guard HT.

4. Elongation at Break: ASTM D 412; Not less than 250 percent.

C. Slip Sheet: Rosin-sized building paper, 3 lb/100 sq. ft minimum.

2.4 MISCELLANEOUS MATERIALS
A. General: Provide materials and types of fasteners[solder], protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal[or manufactured item] unless otherwise indicated.

B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal[or manufactured item].

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
   a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
   b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
   c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.

2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
3. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
4. Fasteners for Zinc-Coated (Galvanized) and Aluminum-Zinc Alloy-Coated Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

C. Solder:
1. For Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
2. For Zinc-Coated (Galvanized) Steel: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead with maximum lead content of 0.2 percent.

D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.

E. Elastomeric Sealant: ASTM C 920, elastomeric silicone polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

F. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

G. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.

H. Bituminous Coating: Cold-applied asphalt emulsion according to ASTM D 1187.

2.5 MANUFACTURED SHEET METAL FLASHING AND TRIM

A. Reglets: Units of type, material, and profile required, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated [with factory-mitered and -welded corners and junctions] [and] [with interlocking counterflashing on exterior face, of same metal as reglet].

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Cheney Flashing Company.
   b. Fry Reglet Corporation.
   c. Heckmann Building Products, Inc.
   d. Hickman Company, W. P.
   e. Hohmann & Barnard, Inc.
   f. Sandell Manufacturing Co., Inc.

2. Material: Stainless steel, 0.019 inch thick or metallic-coated steel, 0.022 inch thick.

3. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.

4. Accessories:

   a. Flexible-Flashign Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.

   b. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing's lower edge.
2.6 FABRICATION, GENERAL

A. General: Custom fabricate sheet metal flashing and trim to comply with details shown and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required. Fabricate sheet metal flashing and trim in shop to greatest extent possible.

1. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
2. Obtain field measurements for accurate fit before shop fabrication.
3. Form sheet metal flashing and trim to fit substrates without excessive oil canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
4. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.

B. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

C. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified in MCA’s "Guide Specification for Residential Metal Roofing."

D. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.
2. Use lapped expansion joints only where indicated on Drawings.

E. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal to provide for proper installation of elastomeric sealant according to cited sheet metal standard.

F. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.

G. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard and by FM Global Property Loss Prevention Data Sheet 1-49 for application, but not less than thickness of metal being secured.

H. Seams: Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.

I. Seams: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. Rivet joints where necessary for strength.

J. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints where necessary for strength.

K. Do not use graphite pencils to mark metal surfaces.
2.7 ROOF-DRAINAGE SHEET METAL FABRICATIONS

A. Downspouts: Fabricate rectangular downspouts to dimensions indicated, complete with mitered elbows. Furnish with metal hangers from same material as downspouts and anchors. Shop fabricate elbows.
   1. Fabricate from one of the following materials:
      a. Galvanized Steel: 0.022 inch thick.
      b. Aluminum-Zinc Alloy-Coated Steel: 0.022 inch thick.

B. Parapet Scuppers: Fabricate scuppers to dimensions required, with closure flange trim to exterior, 4-inch- wide wall flanges to interior, and base extending 4 inches beyond cant or tapered strip into field of roof. Fabricate from the following materials:
   1. Galvanized Steel: 0.028 inch thick.
   2. Aluminum-Zinc Alloy-Coated Steel: 0.028 inch thick.

C. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape required, complete with outlet tubes, exterior flange trim, and built-in overflows. Fabricate from one of the following materials:
   1. Galvanized Steel: 0.028 inch thick.
   2. Aluminum-Zinc Alloy-Coated Steel: 0.028 inch thick.

D. Splash Pans: Fabricate to dimensions and shape required and from the following materials:
   1. Stainless Steel: 0.019 inch thick.

2.8 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

A. Cap Flashing/Counterflashing Fabrication - General: Provide two-piece metal cap flashings, consisting of an upper receiver portion and a lower portion extending over the composition flashing, unless otherwise specified or indicated.
   1. Cap Flashing/Counterflashing Fabrication - Two Piece
      a. Fabricate the receiver portion with outer edge formed into a double fold turned down one inch, unless otherwise indicated, and as follows:
         1) At new masonry walls, extend the receiver portion into the wall as indicated, terminated with 1/4 inch upstand edge, unless indicated to be higher.
         2) At walls faced with metal siding or pre-formed metal panels, extend the receiver portion into the wall as indicated, and terminated with edge folded over support.
         3) At concrete and existing masonry walls, extend the receiver portion into an embedded reglet, sawcut in the profile indicated for a reglet, or form the receiver portion to retain sealant as indicated, using a 3/16 by one inch stainless steel clamping bar. SG: Note Drawing requirement and select one of the two subparagraphs below.
         4) At parapet, extend the receiver portion as indicated and form the upper edge to engage the double fold of coping
      b. Form the upper edge of the lower portion of metal cap flashing to engage in the double fold of receiver portion, bent to provide spring action against the base flashing, fold the lower edge folded back 1/2 inch and lap composition base flashing not less than 4 inches.
      c. Lap ends of each length of both portions of metal cap flashing not less than 3 inches. Weld or solder corner joints. Return ends at roof edge into reglet or wall.
2. Cap Flashing/Counterflashing Fabrication - One Piece
   a. Provide one-piece cap flashing at roof curbs, with top edge formed to retain metal joint sealant and bottom edge folded 1/2 inch to provide drip.

B. Base Flashing: Shop fabricate interior and exterior corners. Fabricate from one of the following materials:
   1. Galvanized Steel: 0.028 inch thick.
   2. Aluminum-Zinc Alloy-Coated Steel: 0.028 inch thick.

C. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from one of the following materials:
   1. Galvanized Steel: 0.022 inch thick.
   2. Aluminum-Zinc Alloy-Coated Steel: 0.022 inch thick.

D. Flashing Receivers: Fabricate from one of the following materials:
   1. Galvanized Steel: 0.022 inch thick.
   2. Aluminum-Zinc Alloy-Coated Steel: 0.022 inch thick.

E. Roof-Penetration Flashing: Fabricate from the following materials:
   1. Stainless Steel: 0.019 inch thick.

F. Roof-Drain Flashing: Fabricate from the following materials:
   1. Stainless Steel: 0.016 inch thick.

2.9 WALL SHEET METAL FABRICATIONS

A. Through-Wall Flashing: Fabricate continuous flashings in minimum 96-inch-long, but not exceeding 12-foot-long, sections, under copings, and at shelf angles. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches beyond each side of wall openings; and form with 2-inch-high, end dams. Fabricate from the following materials:
   1. Stainless Steel: 0.016 inch thick.

B. Opening Head Flashings in Frame Construction: Fabricate head, and similar flashings to extend 4 inches beyond wall openings. Form head flashing with 2-inch-high, end dams. Fabricate from one of the following materials:
   1. Galvanized Steel: [0.022 inch] <Insert dimension> thick.
   2. Aluminum-Zinc Alloy-Coated Steel: [0.022 inch] <Insert dimension> thick.

C. Opening Sill Pan Flashings in Frame Construction: Form sill pan flashing with 2-inch-high, end dams. Fabricate from the following materials:
   1. Aluminum: 0.032 inch thick.

D. Fascia:
   1. Fabricate fascia of aluminum sheets of the following thicknesses:
      a. Up to and including 5 inch vertical face dimension: 0.032 inch.
      b. 5 to 7 inch vertical face dimension: 0.040 inch.
      c. Over 7 inch vertical face dimension: 0.051 inch.
      d. Fabricate cleats of 0.051 inch.
2. Fabricate fascia of 0.018 inch thick stainless steel sheets.
   a. Fabricate cleats of 0.018 inch thick stainless steel strips.

3. Fabricate fascia and cleats of No. 22 gage galvanized steel.

4. Shop-fabricate fascia sections in 10 foot lengths and of one piece material of sufficient width.
   a. Form with upper edge of vertical face bent to form a 3/4 inch high gravel stop and with lower edge folded under 1/2 inch and bent out to hook over the cleat.
   b. Extend horizontal roof flange 4 inches onto roof
   c. Provide sections in one piece assemblies around internal and external corners, with vertical face bent and horizontal section mitered and welded or soldered.

5. Fabricate continuous cleat 1-3/4 inches wide, with one inch vertical leg and 3/4 inch leg bent out at 30 degrees, in sections of maximum practical length.

2.10 MISCELLANEOUS SHEET METAL FABRICATIONS

   A. Equipment Support Flashing: Fabricate from one of the following materials:
      1. Galvanized Steel: 0.028 inch thick.
      2. Aluminum-Zinc Alloy-Coated Steel: 0.028 inch thick.

PART 3 - EXECUTION

3.1 EXAMINATION

   A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.
      1. Verify compliance with requirements for installation tolerances of substrates.
      2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
      3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

   B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

   A. Self-Adhering Sheet Underlayment: Install self-adhering sheet underlayment, wrinkle free. Prime substrate if recommended by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps and edges with roller. Cover underlayment within 14 days.

   B. Apply slip sheet, wrinkle free, [over underlayment] [directly on substrate] <Insert requirement> before installing sheet metal flashing and trim.
3.3 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
3. Space cleats not more than 12 inches apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
4. Install exposed sheet metal flashing and trim with limited oil canning, and free of buckling and tool marks.
5. Torch cutting of sheet metal flashing and trim is not permitted.
6. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.

1. Coat concealed side of uncoated-aluminum and stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at maximum of 10 feet with no joints within 24 inches of corner or intersection.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.
2. Use lapped expansion joints only where indicated on Drawings.

D. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

F. Seal joints as required for watertight construction.

1. Use sealant-filled joints unless otherwise indicated. Embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."
G. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets with solder to width of 1-1/2 inches; however, reduce pre-tinning where pre-tinned surface would show in completed Work.

1. Do not solder metallic-coated steel and aluminum sheet.
2. Do not use torches for soldering.
3. Heat surfaces to receive solder, and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.

3.4 ROOF-DRAINAGE SYSTEM INSTALLATION

A. General: Install sheet metal roof-drainage items to produce complete roof-drainage system according to cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.

B. Downspouts: Join sections with 1-1/2-inch telescoping joints.

1. Provide hangers with fasteners designed to hold downspouts securely to walls. Locate hangers at top and bottom and at approximately 60 inches o.c.
2. Provide elbows at base of downspout to direct water away from building.

C. Splash Pans: Install where downspouts discharge on low-slope roofs. Set in asphalt roofing cement or elastomeric sealant compatible with the substrate.

D. Parapet Scuppers: Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.

1. Anchor scupper closure trim flange to exterior wall and seal with elastomeric sealant to scupper.
2. Loosely lock front edge of scupper with conductor head.
3. Seal with elastomeric sealant exterior wall scupper flanges into back of conductor head.

E. Conductor Heads: Anchor securely to wall, with elevation of conductor head rim at minimum of 1 inch below scupper discharge.

3.5 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and cited sheet metal standard. Provide concealed fasteners where possible, and set units true to line, levels, and slopes. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

B. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in FM Global Property Loss Prevention Data Sheet 1-49 for FM Approvals' listing for required windstorm classification.

C. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inches over base flashing. Install stainless-steel draw band and tighten.

D. Cap Flashing/Counterflashing:
1. Coordinate installation of counterflashing with installation of base flashing.
2. Install metal cap flashing over composition base flashing which turns up into vertical surfaces.
3. In new masonry work, set flashing in a bed of mortar both above and below the metal.
4. At concrete and existing masonry walls, wedge the upper receiver portion of counter-flashing into a reglet with coiled metal plugs compatible with the receiver metal or neoprene wedges, 12 to 16 inches on center, unless otherwise indicated, or anchor stainless steel clamping bar to wall with screws and expansion shields as indicated.
5. Hook lower portion of counter-flashing into upper receiver portion of counter-flashing and fasten with screws at 12 inch spacing and of length required to join the metal but not project into substrate behind the flashing.
6. At roof curbs, apply metal joint sealant and install one-piece cap flashing as indicated.
7. Lap section ends a minimum of 3 inches and seal watertight with mastic.

E. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof.

3.6 WALL FLASHING INSTALLATION

A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

B. Opening Flashings in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches beyond wall openings.

C. Fascia:

1. Fasten continuous cleat to supporting construction with screws evenly spaced not over 12 inches on centers. Where construction is concrete or masonry, drive screws into lead expansion shields set into the substrate. Install strip to extend over the supporting construction to form a drip and to allow the metal fascia to be hooked over the lower edge 3/4 inch.
2. Install fascia with horizontal flange over roofing plies, set in mastic and with lower edge hooked to metal edge strip. Nail horizontal flange to wood blocking at maximum spacing of 3 inches, staggered.
3. Lap joints 3 inches minimum, held together by concealed clips welded or soldered to underside, and fill with metal joint sealant.
4. Do not use exposed nails or other fasteners on face of metal fascia.

3.7 MISCELLANEOUS FLASHING INSTALLATION

A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

3.8 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.
B. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

3.9 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean and neutralize flux materials. Clean off excess solder.

C. Clean off excess sealants.

D. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.

E. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION
SECTION 077200 - ROOF ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Roof curbs.
   2. Equipment supports.
   3. Pipe and duct supports.
   4. Pipe portals.
   5. Preformed flashing sleeves.

B. Related Requirements:
   1. Section 076200 "Sheet Metal Flashing and Trim" for shop- and field-formed metal flashing, and miscellaneous sheet metal trim and accessories.
   2. Section 077100 "Roof Specialties" for manufactured copings, gutters and downspouts, and counterflashing.
   3. Division 23 "Vibration and Seismic Controls for HVAC" for special curbs designed to accommodate seismic and vibration controls.

1.3 COORDINATION

A. Coordinate layout and installation of roof accessories with [roofing membrane and base flashing and ]interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.

B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of roof accessory.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For roof accessories.
   1. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.
D. Samples: For each exposed product and for each color and texture specified, prepared on Samples of size to adequately show color.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
   1. Size and location of roof accessories specified in this Section.
   2. Method of attaching roof accessories to roof or building structure.
   3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
   4. Required clearances.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For roof accessories to include in operation and maintenance manuals.

1.7 WARRANTY

A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finishes or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
      a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
      b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
      c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
   2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Roof accessories installation shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

B. Wind-Restraint Performance: As indicated on Drawings.

2.2 ROOF CURBS

A. Roof Curbs: Internally reinforced roof-curb units capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings, bearing continuously on roof structure, and capable of meeting performance requirements; with welded or mechanically fastened and sealed corner joints, straight sides, integral metal cant, and integrally formed deck-mounting flange at perimeter bottom.

   1. Manufacturers: Subject to compliance with requirements, available manufacturers
offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Greenheck Fan Corporation.
b. Milcor; Commercial Products Group of Hart & Cooley, Inc.
c. Pate Company (The).
d. Roof Curb Systems Inc.
e. Roof Products, Inc.

B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.

C. Supported Load Capacity: Refer to Drawings.

D. Material: Zinc-coated (galvanized) or Aluminum-zinc alloy-coated steel sheet, 0.079 inch thick.
   1. Finish: Two-coat fluoropolymer.
   2. Color: As selected by Architect from manufacturer's full range.

E. Material: Aluminum sheet, 0.125 inch thick.
   1. Finish: Two-coat fluoropolymer.
   2. Color: As selected by Architect from manufacturer's full range.

F. Material: Stainless-steel sheet, 0.078 inch thick.
   1. Finish: Manufacturer's standard.

G. Construction:
   1. Curb Profile: Manufacturer's standard compatible with roofing system.
   2. Fabricate curbs to minimum height of 12 inches above roofing surface unless otherwise indicated.
   3. Top Surface: Level top of curb, with roof slope accommodated by sloping deck-mounting flange or by use of leveler frame.
   4. Sloping Roofs: Where roof slope exceeds 1:48, fabricate curb with perimeter curb height tapered to accommodate roof slope so that top surface of perimeter curb is level. Equip unit with water diverter or cricket on side that obstructs water flow.
   5. Insulation: Factory insulated with 1-1/2-inch thick glass-fiber board insulation.
   6. Liner: Same material as curb, of manufacturer's standard thickness and finish.
   8. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb, of size and spacing required to meet wind uplift requirements.
   9. Platform Cap: Where portion of roof curb is not covered by equipment, provide weathertight platform cap formed from 3/4-inch thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
   10. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as curb.

2.3 EQUIPMENT SUPPORTS

A. Equipment Supports: Internally reinforced perimeter metal equipment supports capable of supporting superimposed live and dead loads between structural supports, including equipment loads and other construction indicated on Drawings, spanning between structural supports;
capable of meeting performance requirements; with welded or mechanically fastened and sealed corner joints, integral metal cant, and integrally formed structure-mounting flange at bottom.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Greenheck Fan Corporation.
   b. Milcor; Commercial Products Group of Hart & Cooley, Inc.
   c. Pate Company (The).
   d. Roof Curb Systems Inc.
   e. Roof Products, Inc.

B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported.

C. Supported Load Capacity: Refer to Drawings.

D. Material: Zinc-coated (galvanized) or Aluminum-zinc alloy-coated steel sheet, 0.079 inch thick.
   1. Finish: Two-coat fluoropolymer.
   2. Color: As selected by Architect from manufacturer's full range.

E. Material: Aluminum sheet, [0.090 inch] [0.125 inch] <Insert dimension> thick.
   1. Finish: Two-coat fluoropolymer.
   2. Color: As selected by Architect from manufacturer's full range.

F. Material: Stainless-steel sheet, 0.078 inch thick.
   1. Finish: Manufacturer's standard.

G. Construction:
   1. Curb Profile: Manufacturer's standard compatible with roofing system.
   2. Insulation: Factory insulated with 1-1/2-inch-thick glass-fiber board insulation.
   3. Liner: Same material as equipment support, of manufacturer's standard thickness and finish.
   4. Nailer: Factory-installed continuous wood nailers 5-1/2 inches wide on top flange of equipment supports, continuous around support perimeter.
   5. Wind Restraint Straps and Base Flange Attachment: Provide wind restraint straps, welded strap connectors, and base flange attachment to roof structure at perimeter of curb of size and spacing required to meet wind uplift requirements.
   6. Platform Cap: Where portion of equipment support is not covered by equipment, provide weathertight platform cap formed from 3/4-inch-thick plywood covered with metal sheet of same type, thickness, and finish as required for curb.
   7. Metal Counterflashing: Manufacturer's standard, removable, fabricated of same metal and finish as equipment support.
   8. Fabricate equipment supports to minimum height of 12 inches above roofing surface unless otherwise indicated.
   9. Sloping Roofs: Where roof slope exceeds 1:48, fabricate each support with height to accommodate roof slope so that tops of supports are level with each other. Equip supports with water diverters or crickets on sides that obstruct water flow.
   10. Security Grille: Provide where indicated on Drawings.
2.4 PIPE AND DUCT SUPPORTS

A. Pipe Supports: As indicated in Structural and Mechanical Drawings.

B. Duct Supports: As indicated in Structural and Mechanical Drawings.

2.5 PIPE PORTALS

A. Curb-Mounted Pipe Portal: Insulated roof-curb units with welded or mechanically fastened and sealed corner joints, straight sides, integral metal cant, and integrally formed deck-mounting flange at perimeter bottom; with weathertight curb cover with single or multiple collared openings and pressure-sealed conically shaped EPDM protective rubber caps sized for piping indicated, with stainless-steel snaplock swivel clamps.

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Roof Products and Systems (RPS); a division of Hart & Cooley, Inc.

B. Flashing Pipe Portal: Formed aluminum membrane-mounting flashing flange and sleeve with collared opening and pressure-sealed conically shaped EPDM protective rubber cap sized for piping indicated, with stainless-steel snaplock swivel clamps.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Roof Products and Systems (RPS); a division of Hart & Cooley, Inc.
2.6 PREFORMED FLASHING SLEEVES

A. Exhaust Vent Flashing: Double-walled metal flashing sleeve or boot, insulation filled, with integral deck flange, 12 inches high, with removable metal hood and slotted or perforated metal collar.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Custom Solution Roof and Metal Products.
      b. Thaler Metal Industries Ltd.
   2. Metal: Aluminum sheet, 0.063 inch thick.
   3. Diameter: As indicated on Drawings.

B. Vent Stack Flashing: Metal flashing sleeve, uninsulated, with integral deck flange.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Custom Solution Roof and Metal Products.
      b. Milcor; Commercial Products Group of Hart & Cooley, Inc.
      c. Thaler Metal Industries Ltd.
   3. Height: 13 inches.
   4. Diameter: As indicated on Drawings.
   5. Finish: Manufacturer's standard.

2.7 METAL MATERIALS

A. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 coating designation[ and mill phosphatized for field painting where indicated].
   1. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.
   2. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A 755/A 755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
      a. Two-Coat Fluoropolymer Finish: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.
   3. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.

B. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, AZ50 coated.
   1. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.
   2. Exposed Coil-Coated Finish: Prepainted by the coil-coating process to comply with ASTM A 755/A 755M. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
a. Two-Coat Fluoropolymer Finish: AAMA 621. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.

3. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.

C. Aluminum Sheet: ASTM B 209, manufacturer's standard alloy for finish required, with temper to suit forming operations and performance required.

1. Mill Finish: As manufactured.
2. Factory Prime Coating: Where field painting is indicated, apply pretreatment and white or light-colored, factory-applied, baked-on epoxy primer coat, with a minimum dry film thickness of 0.2 mil.
3. Exposed Coil-Coated Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   a. Two-Coat Fluoropolymer Finish: AAMA 2605. System consisting of primer and fluoropolymer color topcoat containing not less than 70 percent PVDF resin by weight.

4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.

D. Aluminum Extrusions and Tubes: ASTM B 221, manufacturer's standard alloy and temper for type of use, finished to match assembly where used; otherwise mill finished.

E. Stainless-Steel Sheet and Shapes: ASTM A 240/A 240M or ASTM A 666, Type 316.

F. Steel Shapes: ASTM A 36/A 36M, hot-dip galvanized according to ASTM A 123/A 123M unless otherwise indicated.

G. Galvanized-Steel Tube: ASTM A 500/A 500M, round tube, hot-dip galvanized according to ASTM A 123/A 123M.

2.8 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.

B. Glass-Fiber Board Insulation: ASTM C 726, nominal density of 3 lb/cu. ft., thermal resistivity of 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F, thickness as indicated.

C. Polyisocyanurate Board Insulation: ASTM C 1289, thickness and thermal resistivity as indicated.

D. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, containing no arsenic or chromium, and complying with AWPA C2; not less than 1-1/2 inches thick.

E. Security Grilles: 3/4-inch diameter, ASTM A 1011/A 1011M steel bars spaced 6 inches o.c. in one direction and 12 inches o.c. in the other; factory finished as follows:
1. Surface Preparation: Remove mill scale and rust, if any, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."

2. Factory Priming for Field-Painted Finish: Apply shop primer specified below immediately after surface preparation and pretreatment.

3. Shop Primer: Manufacturer's or fabricator's standard, fast-curing, lead- and chromate-free, universal primer; selected for resistance to normal atmospheric corrosion, for compatibility with substrate and field-applied finish paint system indicated, and for capability to provide a sound foundation for field-applied topcoats under prolonged exposure.

F. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

G. Underlayment:
   1. Slip Sheet: Building paper, 3 lb/100 sq. ft. minimum, rosin sized.
   2. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
   3. Fasteners: Roof accessory manufacturer's recommended fasteners suitable for application and metals being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:
      4. Fasteners for Zinc-Coated or Aluminum-Zinc Alloy-Coated Steel: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A 153/A 153M or ASTM F 2329.
      5. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
      6. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.

H. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.

I. Elastomeric Sealant: ASTM C 920, elastomeric silicone polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.

J. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.

2.9 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.

B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.

C. Verify dimensions of roof openings for roof accessories.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install roof accessories according to manufacturer's written instructions.
   1. Install roof accessories level; plumb; true to line and elevation; and without warping, jogs in alignment, buckling, or tool marks.
   2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
   3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
   4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
   1. Coat concealed side of uncoated aluminum roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
   2. Underlayment: Where installing roof accessories directly on cementitious or wooden substrates, install a course of underlayment and cover with manufacturer's recommended slip sheet.

C. Roof Curb Installation: Install each roof curb so top surface is level Refer to Drawings for additional information.

D. Equipment Support Installation: Install equipment supports so top surfaces are level with each other.

E. Pipe Support Installation: Comply with MSS SP-58 and MSS SP-89. Install supports and attachments as required to properly support piping. Arrange for grouping of parallel runs of horizontal piping, and support together.
   1. Pipes of Various Sizes: Space supports for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
F. Preformed Flashing-Sleeve and Flashing Pipe Portal Installation: Secure flashing sleeve to roof membrane according to flashing-sleeve manufacturer's written instructions; flash sleeve flange to surrounding roof membrane according to roof membrane manufacturer's instructions.

G. Security Grilles: Weld bar intersections and ends of bars to structural frame or primary curb walls.

H. Seal joints with elastomeric butyl sealant as required by roof accessory manufacturer.

3.3 REPAIR AND CLEANING

A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A 780/A 780M.

B. Touch up factory-primed surfaces with compatible primer ready for field painting according to Section 099113 "Exterior Painting."

C. Clean exposed surfaces according to manufacturer's written instructions.

D. Clean off excess sealants.

E. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION
SECTION 078413 - PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Penetrations in fire-resistance-rated walls.
      2. Penetrations in horizontal assemblies.
      3. Penetrations in smoke barriers.

1.3 ACTION SUBMITTALS
   A. Product Data:  For each type of product indicated.
   B. Sustainable Design Submittals required by Section 01813 applicable to this Section.
   C. Product Schedule:  For each penetration firestopping system. Include location and design designation of qualified testing and inspecting agency.
      1. Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping condition, submit illustration, with modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.4 QUALITY ASSURANCE
   A. Installer Qualifications:  A firm that has been approved by FM Global according to FM Global 4991, “Approval of Firestop Contractors,” or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."
   B. Installer Qualifications:  A firm experienced in installing penetration firestopping similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its penetration firestopping products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.
   C. Installation Responsibility: Assign installation of penetration firestopping and fire-resistive joint systems to a single qualified firestop contractor.
   D. Fire-Test-Response Characteristics: Penetration firestopping shall comply with the following requirements:
      1. Penetration firestopping tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
2. Penetration firestopping is identical to those tested per testing standard referenced in "Penetration Firestopping" Article. Provide rated systems complying with the following requirements:
   a. Penetration firestopping products bear classification marking of qualified testing and inspecting agency.
   b. Classification markings on penetration firestopping correspond to designations listed by one of the following:
      1) UL in its "Fire Resistance Directory."
      2) Intertek ETL SEMKO in its "Directory of Listed Building Products."
      3) FM Global in its "Building Materials Approval Guide."

E. Provide the following upon request:
   1. Qualification Data: For qualified Installer.
   2. Installer Certificates: From Installer indicating penetration firestopping has been installed in compliance with requirements and manufacturer's written recommendations.
   3. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for penetration firestopping.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not install penetration firestopping when ambient or substrate temperatures are outside limits permitted by penetration firestopping manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.

B. Install and cure penetration firestopping per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.6 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping is installed according to specified requirements.

B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping.

C. Notify District's testing agency at least seven days in advance of penetration firestopping installations; confirm dates and times on day preceding each series of installations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   2. Hilti, Inc.
   3. Specified Technologies Inc.
   4. 3M Fire Protection Products.
2.2 PENETRATION FIRESTOPPING

A. Provide penetration firestopping that is produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.

B. Penetrations in Fire-Resistance-Rated Walls: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
   1. Fire-resistance-rated walls include fire walls, fire-barrier walls, smoke-barrier walls, and fire partitions, as occur.
   2. F-Rating: Not less than the fire-resistance rating of constructions penetrated.

C. Penetrations in Horizontal Assemblies: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
   1. Horizontal assemblies include floors, floor/ceiling assemblies and ceiling membranes of roof/ceiling assemblies, as occur.
   2. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.
   3. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.

D. Penetrations in Smoke Barriers: Provide penetration firestopping with ratings determined per UL 1479.
   1. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at 0.30-inch wg at both ambient and elevated temperatures.

E. W-Rating: Provide penetration firestopping showing no evidence of water leakage when tested according to UL 1479.

F. Exposed Penetration Firestopping: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

G. VOC Content: Penetration firestopping sealants and sealant primers shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
   1. Sealants: 250 g/L.
   2. Sealant Primers for Nonporous Substrates: 250 g/L.
   3. Sealant Primers for Porous Substrates: 775 g/L.

H. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping manufacturer and approved by qualified testing and inspecting agency for firestopping indicated.
   1. Permanent forming/damming/backing materials, including the following:
      a. Slag-wool-fiber or rock-wool-fiber insulation.
      b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
      c. Fire-rated form board.
      d. Fillers for sealants.
   2. Temporary forming materials.
5. Steel sleeves.

2.3 FILL MATERIALS

A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.

C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized-steel sheet.

E. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.

F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.

G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.

H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.

I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and sloped surfaces, unless indicated firestopping limits use of nonsag grade for both opening conditions.

2.4 MIXING

A. For those products requiring mixing before application, comply with penetration firestopping manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean out openings immediately before installing penetration firestopping to comply with manufacturer's written instructions and with the following requirements:
   1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping.
   2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping. Remove loose particles remaining from cleaning operation.
   3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent penetration firestopping from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing firestopping's seal with substrates.

3.3 INSTALLATION

A. General: Install penetration firestopping to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
   1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestopping.

C. Install fill materials for firestopping by proven techniques to produce the following results:
   1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
   2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
   3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.
3.4 **IDENTIFICATION**

A. Identify penetration firestopping with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of firestopping edge so labels will be visible to anyone seeking to remove penetrating items or firestopping. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:

1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
2. Contractor's name, address, and phone number.
3. Designation of applicable testing and inspecting agency.
4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

3.5 **FIELD QUALITY CONTROL**

A. District will engage a qualified testing agency to perform tests and inspections.

B. Where deficiencies are found or penetration firestopping is damaged or removed because of testing, repair or replace penetration firestopping to comply with requirements.

C. Proceed with enclosing penetration firestopping with other construction only after inspection reports are issued and installations comply with requirements.

3.6 **CLEANING AND PROTECTION**

A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping manufacturers and that do not damage materials in which openings occur.

B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping is without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping and install new materials to produce systems complying with specified requirements.

3.7 **PENETRATION FIRESTOPPING SCHEDULE**

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHEZ.

B. Where Intertek ETL SEMKO-listed systems are indicated, they refer to design numbers in Intertek ETL SEMKO's "Directory of Listed Building Products" under "Firestop Systems."

C. Where FM Global-approved systems are indicated, they refer to design numbers listed in FM Global's "Building Materials Approval Guide" under "Wall and Floor Penetration Fire Stops."

END OF SECTION
SECTION 078443 - JOINT FIRESTOPPING AND FIRESAFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Joints in or between fire-resistance-rated constructions.
   2. Joints at exterior curtain-wall/floor intersections.

B. Related Requirements:
   1. Section 078413 "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers and for wall identification.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Product Schedule: For each joint firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing agency.
   1. Engineering Judgments: Where Project conditions require modification to a qualified testing agency's illustration for a particular joint firestopping system condition, submit illustration, with modifications marked, approved by joint firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.5 CLOSEOUT SUBMITTALS

A. Installer Certificates: From Installer indicating that joint firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.
1.6 QUALITY ASSURANCE

A. Installer Qualifications: A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with UL's "Qualified Firestop Contractor Program Requirements."

B. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Product Test Reports: For each joint firestopping system, for tests performed by a qualified testing agency.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not install joint firestopping systems when ambient or substrate temperatures are outside limits permitted by joint firestopping system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.

B. Install and cure joint firestopping systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.8 COORDINATION

A. Coordinate construction of joints to ensure that joint firestopping systems can be installed according to specified firestopping system design.

B. Coordinate sizing of joints to accommodate joint firestopping systems.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics:
   1. Perform joint firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
   2. Test per testing standards referenced in "Joint Firestopping Systems" Article. Provide rated systems complying with the following requirements:
      a. Joint firestopping systems shall bear classification marking of a qualified testing agency.
         1) UL in its "Fire Resistance Directory."
         2) Intertek Group in its "Directory of Listed Building Products."

2.2 JOINT FIRESTOPPING SYSTEMS

A. Joint Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which joint firestopping systems are installed. Joint firestopping systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.
B. Joints in or between Fire-Resistance-Rated Construction: Provide joint firestopping systems with ratings determined per ASTM E 1966 or UL 2079.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Rockwool (formerly Roxul Inc.).
      b. Thermafiber, Inc.; an Owens Corning company.
      c. Tremco, Inc.
   2. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the wall, floor, or roof in or between which it is installed.

C. Joints at Exterior Curtain-Wall/Floor Intersections: Provide mineral wool joint firestopping systems with rating determined per ASTM E 2307; minimum density of 4 lbs per cu. ft..
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Rockwool (formerly Roxul Inc.).
      b. Thermafiber, Inc.; an Owens Corning company.
      c. Tremco, Inc.
   2. F-Rating: Equal to or exceeding the fire-resistance rating of the floor assembly.

D. Joints in Smoke Barriers: Provide fire-resistive joint systems with ratings determined per UL 2079 based on testing at a positive pressure differential of 0.30-inch wg.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Rockwool (formerly Roxul Inc.).
      b. Thermafiber, Inc.; an Owens Corning company.
      c. Tremco, Inc.
   2. L-Rating: Not exceeding 5.0 cfm/ft. of joint at both ambient and elevated temperatures.

E. Exposed Joint Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.
   1. Sealant shall have a VOC content of 250 g/L or less.

F. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install elastomeric fill materials and to maintain ratings required. Use only components specified by joint firestopping system manufacturer and approved by the qualified testing agency for conditions indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 PREPARATION

A. Surface Cleaning: Before installing fire-resistive joint systems, clean joints immediately to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
   1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of elastomeric fill materials or compromise fire-resistive rating.
   2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with elastomeric fill materials. Remove loose particles remaining from cleaning operation.
   3. Remove laitance and form-release agents from concrete.

B. Prime substrates where recommended in writing by joint firestopping system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

3.3 INSTALLATION

A. General: Install fire-resistive joint systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support elastomeric fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
   1. After installing elastomeric fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.

C. Install elastomeric fill materials for fire-resistive joint systems by proven techniques to produce the following results:
   1. Elastomeric fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
   2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
   3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Joint Identification: Identify joint firestopping systems with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of joint edge so labels are visible to anyone seeking to remove or joint firestopping system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
   2. Contractor's name, address, and phone number.
   3. Designation of applicable testing agency.
   4. Date of installation.
   5. Manufacturer's name.
   6. Installer's name.
3.5 FIELD QUALITY CONTROL

A. Inspecting Agency: District will engage a qualified testing agency to perform tests and inspections according to ASTM E 2393.

B. Where deficiencies are found or joint firestopping systems are damaged or removed due to testing, repair or replace joint firestopping systems so they comply with requirements.

C. Proceed with enclosing joint firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

3.6 CLEANING AND PROTECTION

A. Clean off excess elastomeric fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by joint firestopping system manufacturers and that do not damage materials in which joints occur.

B. Provide final protection and maintain conditions during and after installation that ensure joint firestopping systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

3.7 JOINT FIRESTOPPING SYSTEM SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHBN or Category XHDG.

B. Where Intertek Group-listed systems are indicated, they refer to design numbers in Intertek Group's "Directory of Listed Building Products" under product category Firestop Systems.

END OF SECTION
SECTION 079200 - JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Silicone joint sealants.
   2. Urethane joint sealants.
   3. Latex joint sealants.
   4. Preformed joint sealants.
   5. Acoustical joint sealants.

B. Related Requirements:
   1. Section 078443 "Joint Firestopping" for sealing joints in fire-resistance-rated construction.
   2. Section 088000 "Glazing" for glazing sealants.
   3. Section 092900 "Gypsum Board" for acoustical sealing of perimeter joints.
   4. Section 093000 "Tiling" for sealing tile joints.

1.3 PRECONSTRUCTION TESTING

A. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.
   1. Use ASTM C 1087 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
   2. Submit not fewer than eight pieces of each kind of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
   3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
   4. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.
   5. Testing will not be required if joint-sealant manufacturers submit joint preparation data that are based on previous testing, not older than 24 months, of sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:
   1. Locate test joints where indicated on Project or, if not indicated, as directed by Architect.
   2. Conduct field tests for each application indicated below:
      a. Each kind of sealant and joint substrate indicated.
   3. Notify Architect seven days in advance of dates and times when test joints will be erected.
   4. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.
   1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

5. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.

6. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.4 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 070413.

B. Product Data: For each joint-sealant product indicated.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.

E. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch wide joints formed between two 6-inch long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

F. Joint-Sealant Schedule: Include the following information:
   1. Joint-sealant application, joint location, and designation.
   2. Joint-sealant manufacturer and product name.

1.5 INFORMATIONAL SUBMITTALS

A. Preconstruction Compatibility and Adhesion Test Reports: From sealant manufacturer, indicating the following:
   1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
   2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.

B. Preconstruction Field-Adhesion Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.

C. Field-Adhesion Test Reports: For each sealant application tested.
1.6 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

B. Source Limitations: Obtain each kind of joint sealant from single source from single manufacturer.

C. Product Testing: Test joint sealants using a qualified testing agency.
   1. Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.
   2. Test according to SWRI's Sealant Validation Program for compliance with requirements specified by reference to ASTM C 920 for adhesion and cohesion under cyclic movement, adhesion-in-peel, and indentation hardness.

D. Provide the following upon request:
   1. Qualification Data: For qualified Installer and testing agency.
   2. Product Certificates: For each kind of joint sealant and accessory, from manufacturer.
   3. Sealant, Waterproofing, and Restoration Institute (SWRI) Validation Certificate: For each sealant specified to be validated by SWRI's Sealant Validation Program.
   4. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that sealants comply with requirements.

E. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

1.7 PROJECT CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:
   1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer[ or are below 40 deg F].
   2. When joint substrates are wet.
   3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
   4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.8 WARRANTY

A. Special Installer's Warranty: Manufacturer's standard form in which Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
   1. Warranty Period: Five years from date of Substantial Completion.

B. Special Manufacturer's Warranty: Manufacturer's standard form in which joint-sealant manufacturer agrees to furnish joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.
   1. Warranty Period: Two years from date of Substantial Completion.

C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
1. Movement of the structure caused by structural settlement or errors attributable to design or construction resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
2. Disintegration of joint substrates from natural causes exceeding design specifications.
3. Mechanical damage caused by individuals, tools, or other outside agents.
4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

B. VOC Content of Interior Sealants: Sealants and sealant primers used inside the weatherproofing system shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
   1. Architectural Sealants: 250 g/L.
   2. Sealant Primers for Nonporous Substrates: 250 g/L.
   3. Sealant Primers for Porous Substrates: 775 g/L.

C. Liquid-Applied Joint Sealants: Comply with ASTM C 920 and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.
   1. Suitability for Immersion in Liquids. Where sealants are indicated for Use I for joints that will be continuously immersed in liquids, provide products that have undergone testing according to ASTM C 1247. Liquid used for testing sealants is deionized water, unless otherwise indicated.

D. Stain-Test-Response Characteristics: Where sealants are specified to be nonstaining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.

E. Suitability for Contact with Food: Where sealants are indicated for joints that will come in repeated contact with food, provide products that comply with 21 CFR 177.2600.

F. Colors of Exposed Joint Sealants: [As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range].

2.2 SILICONE JOINT SEALANTS

A. Sealant JS-51 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT.
   1. Products: Subject to compliance with requirements, provide products from the following table that has a validation certificate from the Sealant, Waterproofing and Restoration Institute (SWRI).

2.3 WEATHER BARRIER SEALANTS

A. Sealant JS-W1 - Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT; tested and marketed specifically for sealing air barrier and vapor retarder sheets to common building materials, such as aluminum, vinyl, PVC, powder coat, paint and fluoropolymer coatings; UV resistant.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Dow Corning Corporation; 758.

2.4 URETHANE JOINT SEALANTS

A. Sealant JS-U1 - Multicomponent, Pourable, Traffic-Grade, Urethane Joint Sealant: ASTM C 920. Type M, Grade P, Class 25, for Use T and I.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. LymTal International, Inc.; Iso-Flex 880 GB.
   b. May National Associates, Inc.; Bondaflex PUR 2 SL.
   c. Tremco Incorporated; Vulkem 445SSL or Vulkem 45SSL.

B. Sealant JS-U2 - Multicomponent, Nonsag, Traffic-Grade, Urethane Joint Sealant: ASTM C 920, Type M, Grade NS, Class 25, for Use T.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. BASF Building Systems; MasterSeal NP 2.
   b. Pecora Corporation; Dynatred.
   c. Sika Corporation, Construction Products Division; Sikaflex - 2c NS.
   d. Tremco Incorporated; Vulkem 227.

2.5 LATEX JOINT SEALANTS

A. Sealant JS-L1 - Latex Joint Sealant: Acrylic latex or siliconized acrylic latex, ASTM C 834.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. BASF Building Systems; Sonolac.
c. Pecora Corporation; AC-20 + Silicone.
d. Tremco Incorporated; Tremflex 834.

2.6 MILDEW-RESISTANT JOINT SEALANTS

A. Sealant JS-M1 - Mildew-Resistant, Single-Component, Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. BASF Building Systems; Omniplus.
   b. Dow Corning Corporation; 786 Mildew Resistant.
   c. GE Advanced Materials - Silicones; Sanitary SCS1700.
   d. Pecora Corporation; 898.
   e. Tremco Incorporated; Tremsil 200 Sanitary.

2.7 ACOUSTICAL JOINT SEALANTS

A. Sealant JS-A1 - Acoustical Joint Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Accumetric LLC; BOSS 826 Acoustical Sound Sealant.
   b. GE Construction Sealants; RCS20 Acousticsl.
   c. Grabber Construction Products; Acoustical Sealant GSC.
   d. Pecora Corporation; AC-20 FTR or AIS-919.
   e. Tremco, Incorporated; Tremco Acoustical Sealant.
   f. USG Corporation; SHEETROCK Acoustical Sealant.

2.8 PREFORMED JOINT SEALANTS

A. Sealant JS-P1 - Preformed Silicone Joint Sealants: Manufacturer's standard sealant consisting of precured low-modulus silicone extrusion, in sizes to fit joint widths indicated, combined with a neutral-curing silicone sealant for bonding extrusions to substrates.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. Dow Corning Corporation; 123 Silicone Seal.
   b. GE Construction Sealants; UltraSpan US1100.
   c. Pecora Corporation; Sil-Span.
   d. Tremco Incorporated; Spectrem Simple Seal.

2.9 JOINT SEALANT BACKING

A. General: Provide sealant backings of material that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
B. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin) Type O (open-cell material) Type B (bicellular material with a surface skin) or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.10 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
   1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
   2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
      a. Concrete.
      b. Masonry.
      c. Unglazed surfaces of ceramic tile.
      d. Exterior insulation and finish systems.
3. Remove laitance and form-release agents from concrete.
4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
   a. Metal.
   b. Glass.
   c. Porcelain enamel.
   d. Glazed surfaces of ceramic tile.

B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Do not extend exterior sealants and primers into building interior (that is, inside the weatherproofing system) unless first verifying compliance with VOC requirements.

D. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
   1. Do not leave gaps between ends of sealant backings.
   2. Do not stretch, twist, puncture, or tear sealant backings.
   3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.

E. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

F. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
   1. Place sealants so they directly contact and fully wet joint substrates.
   2. Completely fill recesses in each joint configuration.
   3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

G. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
   1. Remove excess sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not
discolor sealants or adjacent surfaces. Water-based tooling agents are unacceptable.
3. Provide concave joint profile per Figure 8A in ASTM C 1193, unless otherwise indicated.
4. Provide flush joint profile where indicated per Figure 8B in ASTM C 1193.
5. Provide recessed joint configuration of recess depth and at locations indicated per Figure 8C in ASTM C 1193.
   a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

H. Installation of Preformed Silicone-Sealant System: Comply with the following requirements:
1. Apply masking tape to each side of joint, outside of area to be covered by sealant system.
2. Apply silicone sealant to each side of joint to produce a bead of size complying with preformed silicone-sealant system manufacturer's written instructions and covering a bonding area of not less than 3/8 inch. Hold edge of sealant bead 1/4 inch inside masking tape.
3. Within 10 minutes of sealant application, press silicone extrusion into sealant to wet extrusion and substrate. Use a roller to apply consistent pressure and ensure uniform contact between sealant and both extrusion and substrate.
4. Complete installation of sealant system in horizontal joints before installing in vertical joints. Lap vertical joints over horizontal joints. At ends of joints, cut silicone extrusion with a razor knife.

I. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrapping. Do not pull or stretch material. Produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures, apply heat to sealant in compliance with sealant manufacturer's written instructions.

J. Acoustical Sealant Installation: At sound-rated assemblies and elsewhere as indicated, seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919, manufacturer's written recommendations, and section 092900 "Gypsum Board."

3.4 FIELD QUALITY CONTROL

A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
1. Extent of Testing: Test completed and cured sealant joints as follows:
   a. Perform 10 tests for the first 1000 feet of joint length for each kind of sealant and joint substrate.
   b. Perform 1 test for each 1000 feet of joint length thereafter or 1 test per each floor per elevation.
   a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
3. Inspect tested joints and report on the following:
   a. Whether sealants filled joint cavities and are free of voids.
   b. Whether sealant dimensions and configurations comply with specified requirements.
   c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.
4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.

5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

B. Evaluation of Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.7 JOINT-SEALANT SCHEDULE

A. Joint-Sealant Application: Exterior joints in horizontal traffic surfaces; Type JS-U1.

1. Joint Locations:
   a. Isolation and contraction joints in cast-in-place concrete slabs.
   b. Other joints as indicated.

2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

B. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces; Type JS-S1, JS-S2, or JS-P1.

1. Joint Locations:
   b. Joints between plaster edge material and adjacent materials.
   c. Architectural concrete units.
   d. Control and expansion joints in unit masonry.
   e. Joints between metal panels.
   f. Joints between different materials listed above.
   g. Perimeter joints between materials listed above and frames of doors, windows, and louvers.
   h. Control and expansion joints in ceilings and other overhead surfaces.
   i. Other joints as indicated.

2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
C. Joint-Sealant Application: Exterior weather barrier joints; Type JS-W1.

D. Joint-Sealant Application: Interior joints in horizontal traffic surfaces; Type JS-U1 JS-U2.
   1. Joint Locations:
      b. Control and expansion joints in tile flooring.
      c. Other joints as indicated.
   2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

E. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces; Type JS-L1.
   1. Joint Locations:
      a. Control and expansion joints on exposed interior surfaces of exterior walls.
      b. Perimeter joints of exterior openings where indicated.
      c. Wall tile control and expansion joints.
      d. Vertical joints on exposed surfaces of walls and partitions.
      e. Perimeter joints between interior wall surfaces and frames of interior doors, windows, and elevator entrances.
      f. Other joints as indicated.
   2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

F. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces; Type JS-M1.
   1. Joint Location:
      a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
      b. Tile control and expansion joints where indicated.
      c. Other joints as indicated.
   2. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

END OF SECTION
PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes exterior building expansion joint cover and filler assemblies.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for expansion joint cover assemblies.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For each expansion joint cover assembly.
   1. Include plans, elevations, sections, details, splices, block-out requirement, attachments to other work, and line diagrams showing entire route of each expansion joint.
   2. Where expansion joint cover assemblies change planes, provide isometric or clearly detailed drawing depicting how components interconnect.

D. Samples: For each exposed expansion joint cover assembly and for each color and texture specified, full width by 6 inches long in size.

E. Certification: Manufacturer shall provide certification letter or test report confirming use of expansion joint cover and filler in NFPA 285 rated assembly.

F. Expansion Joint Cover Assembly Schedule: Prepared by or under the supervision of the supplier. Include the following information in tabular form:
   1. Manufacturer and model number for each expansion joint cover assembly.
   2. Expansion joint cover assembly location cross-referenced to Drawings.
   3. Nominal, minimum, and maximum joint width.
   4. Movement direction.
   5. Materials, colors, and finishes.
   6. Fire rating.
   7. Product options.

1.4 INFORMATIONAL SUBMITTALS

A. Certification: Manufacturer's certificate of compliance with NFPA 285 for each component.
B. Product Test Reports: For each fire-resistance-rated expansion joint cover assembly, for tests performed by manufacturer and witnessed by a qualified testing agency or by a qualified testing agency.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Approved by manufacturer and having experience installing joint systems that are similar in design complexity.

B. Source Limitations: Obtain all architectural joint systems through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of architectural joint systems and are based on the specific systems indicated. Refer to Division 01 Section "Product Requirements."
   1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

D. Fire-Test-Response Characteristics: Where indicated, provide architectural joint system and fire-barrier assemblies identical to those of assemblies tested for fire resistance per UL 2079 and/or ASTM E 1966 by a testing and inspecting agency acceptable to authorities having jurisdiction. Fire rating not less than the rating of adjacent construction.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of expansion joint cover and filler systems that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including rupturing, cracking, or puncturing.
      b. Deterioration of metals, seals and other materials beyond normal weathering.
   2. Warranty Period: [Five] <Insert number> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 ASSEMBLY DESCRIPTION

A. Furnish units in longest practicable lengths to minimize field splicing.

B. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion joint cover assemblies.

C. Miters and changes in direction may be field fabricated.
2.2 GENERAL PERFORMANCE REQUIREMENTS

A. Seismic Performance: Expansion joint cover assemblies shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

B. Expansion Joint Design Criteria:
   1. Type of Movement: Thermal.
      a. Nominal Joint Width: As indicated on Drawings.
   2. Type of Movement: Seismic.
      a. Joint Movement: 100 percent.

2.3 EXTERIOR EXPANSION JOINT COVERS

A. Exterior Elastomeric-Seal Joint Cover: Assembly consisting of accordion-shaped elastomeric seal anchored to surface-mounted frames fixed to sides of joint gap.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Model SC-300 as manufactured by Construction Specialties, Inc., or comparable product by one of the following:
      a. Balco, Inc.
      b. InPro Corporation (IPC).
      c. Nystrom, Inc.
   2. Application: Wall to wall/corner.
   3. Installation: Recessed.
   4. Primary Seal: Preformed elastomeric membrane or extrusion set in metal frame.
      a. Color: As selected by Architect from manufacturer's full range.
   5. Secondary Seal: Manufacturer's standard extruded-elastomeric seal designed to prevent water and moisture infiltration.
   6. Fire Barrier: Provide 2-hour rated fire barrier.

B. Pre-Compressed-Seal Joint Filler: Precompressed fire-retardant-impregnated foam with both sides faced with waterproof silicone seal.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Model 2VFR-300 as manufactured by Construction Specialties, Inc., or comparable product by one of the following:
      a. Balco, Inc.
      b. InPro Corporation (IPC).
      c. Nystrom, Inc.
   2. Application: Wall to wall/corner.
   3. Installation: Recessed.
   5. Seal: Silicone.
      a. Color: As selected by Architect from manufacturer's full range.

2.4 PLAZA DECK EXPANSION JOINT COVERS

A. Metal-Plate Parking Deck Joint Cover: Assembly consisting of metal cover plate in continuous contact with metal frames fixed to sides of joint gap.
1. **Basis-of-Design Product:** Subject to compliance with requirements, provide Model PTS as manufactured by Nystrom, Inc. or comparable product by one of the following:
   a. Balco, Inc.
   b. Construction Specialties, Inc.
   c. InPro Corporation (IPC).

2. Application: Slab to slab.
3. Joint Width: As indicated.
4. Installation: Recessed block out.
5. Load Capacity:
   a. Uniform Load: 200 lb/sq. ft.
   c. Maximum Deflection: 0.125 inch.
6. Fire-Resistance Rating: Not less than that indicated on Drawings.
7. Cover-Plate Design: Plain.
8. Exposed Metal:
   a. Aluminum: Manufacturer's standard.

### 2.5 MATERIALS

   1. Finish: Class II, Clear Anodic Finish: AA-M12C22A31 (Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.

B. **Elastomeric Seals:** Manufacturer’s standard preformed elastomeric membranes or extrusions to be installed in metal frames.

C. **Compression Seals:** ASTM D2000; preformed rectangular elastomeric extrusions having internal baffle system and designed to function under compression.

D. **Fire Barriers:** Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to meet performance criteria for required rating period.

E. **Moisture Barrier:** Manufacturer’s standard, flexible elastomeric material.

### 2.6 ACCESSORIES

A. **Moisture Barriers:** Manufacturer’s standard continuous, waterproof membrane within joint and attached to substrate on sides of joint.
   1. Provide where indicated on Drawings.

B. **Manufacturer’s standard attachment devices.** Include anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces where expansion joint cover assemblies will be installed for installation tolerances and other conditions affecting performance of the Work.

B. Notify Architect where discrepancies occur that will affect proper expansion joint cover assembly installation and performance.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to expansion joint cover assembly manufacturer's written instructions.

B. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion joint cover assemblies. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion joint cover assemblies.

3.3 INSTALLATION

A. Comply with manufacturer's written instructions for storing, handling, and installing expansion joint cover assemblies and materials unless more stringent requirements are indicated.

B. Metal Frames: Perform cutting, drilling, and fitting required to install expansion joint cover assemblies.
   1. Install in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
   2. Adjust for differences between actual structural gap and nominal design gap due to ambient temperature at time of installation.
   3. Cut and fit ends to accommodate thermal expansion and contraction of metal without buckling of frames.
   4. Install frames in continuous contact with adjacent surfaces.
      a. Shimming is not permitted.
   5. Locate anchors at interval recommended by manufacturer, but not less than 3 inches from each end and not more than 24 inches o.c.

C. Seals: Install elastomeric seals and membranes in frames to comply with manufacturer's written instructions. Install with minimum number of end joints.
   1. Provide in continuous lengths for straight sections.
   2. Seal transitions. Vulcanize or heat-weld field-spliced joints as recommended by manufacturer.
   3. Installation: Mechanically lock seals into frames or adhere to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.

D. Compression Seals: Apply adhesive or lubricant adhesive as recommended by manufacturer before installing compression seals.
E. Install with hairline mitered corners where expansion joint cover assemblies change direction or abut other materials.

F. Terminate exposed ends of expansion joint cover assemblies with field- or factory-fabricated termination devices.

G. Fire-Resistance-Rated Assemblies: Coordinate installation of architectural joint assembly materials and associated work so complete assemblies comply with assembly performance requirements.
   1. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.

H. Water Barriers: Provide water barrier at exterior joints. Provide drainage fittings where indicated.

3.4 PROTECTION

A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.

B. Protect the installation from damage by work of other Sections.

END OF SECTION
SECTION 080413 - COMMON SUBMITTAL REQUIREMENTS FOR OPENINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:
   1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.
   1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:
   1. Shop Drawings.
   2. Product Data.
   3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
   a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Refer to Section 01330 for quantity of days allowed for review.
2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project’s environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR’S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER’S AND GENERAL CONTRACTOR’S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect’s staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:

1. Action Codes Permitting Use:

   a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.

   b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.

   c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect's notations and Contract Document requirements.
d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.

2. Action Code Prohibiting Use:
   a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
   a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. Informational Submittals: For Architect's information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

1. Action Code for Information Only:
   a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned un-reviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.

1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.

1. Submittal Numbering: See below.
2. Contact Information: Full Name, Phone Number and Email Address.

B. Submittal Definition

1. Each submittal consists of items from only ONE Specifications section.
2. Complete Submittal: If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.
3. Partial Submittals: If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).
4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.

C. Submittal Numbering
1. Number submittals as described below to assist tracking.
2. Number each submittal in the format nnnnnn-nn.
   a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.
   b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.
   c. P-Number for Partial Submittals: Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.
   d. R-Number for Re-submittals: Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.
   e. Examples:

3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS

A. Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.

B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:
   1. Submittal Number: See Submittal Numbering in Submittal Transmittal Requirements paragraph.

D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION
SECTION 081113 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes hollow-metal work.

B. Related Requirements:
   1. Section 081416 "Flush Wood Doors" for wood doors installed in hollow-metal frames.
   2. Section 083473.13 "Metal Sound Control Door Assemblies" for packaged, acoustical hollow-metal door and frame assemblies with STC ratings of 35 or more.
   3. Section 087100 "Door Hardware" for door hardware for hollow-metal doors.
   4. Section 099600 "High-Performance Coatings" for epoxy coatings on hollow metal doors and frames.

1.3 DEFINITIONS

A. Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.

1.4 COORDINATION

A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, core descriptions, fire-resistance ratings, temperature-rise ratings, and finishes.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Include the following:
   1. Elevations of each door type.
   2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
   3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   4. Locations of reinforcement and preparations for hardware.
   5. Details of each different wall opening condition.
   6. Details of anchorages, joints, field splices, and connections.
7. Details of accessories.
8. Details of moldings, removable stops, and glazing.
9. Details of conduit and preparations for power, signal, and control systems.

D. Samples for Initial Selection: For units with factory-applied color finishes.

E. Samples for Verification:
1. For each type of exposed finish required, prepared on Samples of not less than 3 by 5 inches.
2. For "Doors" and "Frames" subparagraphs below, prepare Samples approximately 8 by 10 inches to demonstrate compliance with requirements for quality of materials and construction:
   a. Doors: Show vertical-edge, top, and bottom construction; core construction; and hinge and other applied hardware reinforcement. Include separate section showing glazing if applicable.
   b. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.

F. Schedule: Provide a schedule of hollow-metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final Door Hardware Schedule.

1.6 QUALITY ASSURANCE

A. Provide the following upon request.
1. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow-metal work palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store hollow-metal work vertically under cover at Project site with head up. Place on minimum 4-inch high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Amweld International, LLC.
2. Ceco Door; ASSA ABLOY.
3. Curries Company; ASSA ABLOY.
4. Door Components, Inc.
5. Steelcraft; an Allegion brand.

B. Source Limitations: Obtain hollow-metal work from single source from single manufacturer.

2.2 REGULATORY REQUIREMENTS

A. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
   1. Smoke- and Draft-Control Assemblies: Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.

B. Fire-Rated, Borrowed-Lite Assemblies: Complying with NFPA 80 and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9.

2.3 INTERIOR DOORS AND FRAMES

A. Construct interior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

B. Heavy-Duty Doors: SDI A250.8, Level 2.
   1. Physical Performance: Level B according to SDI A250.4.
   2. Doors:
      a. Type: As indicated in the Door Schedule.
      c. Face: Uncoated, cold-rolled steel sheet, minimum thickness of 0.042 inch.
      d. Edge Construction: Model 2, Seamless.
      e. Core: Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, polysiocyanurate, mineral-board, or vertical steel-stiffener core at manufacturer's discretion.
      f. Locations: Typical, except as indicated.
   3. Exposed Finish: Primed for field coating.

   1. Physical Performance: Level A according to SDI A250.4.
   2. Doors:
      a. Type: As indicated in the Door Schedule.
      c. Face: Uncoated, cold-rolled steel sheet, minimum thickness of 0.053 inch.
      d. Edge Construction: Model 2, Seamless.
      e. Core: Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, polysiocyanurate, mineral-board, or vertical steel-stiffener core at manufacturer's discretion.
      f. Locations: At hollow metal door locations in high traffic areas not indicated to be wood doors or otherwise indicated, and at mechanical equipment rooms.
3. Frames:
   a. Materials: Uncoated, steel sheet, minimum thickness of 0.053 inch.
   b. Sidelite Frames: Fabricated from same thickness material as adjacent door frame.
   c. Construction: Full profile welded.
   d. Locations: Typical.
4. Exposed Finish: Primed for field coating.

2.4 EXTERIOR HOLLOW-METAL DOORS AND FRAMES

A. Construct exterior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

   1. Physical Performance: Level A according to SDI A250.4.
   2. Doors:
      a. Type: As indicated in the Door Schedule.
      b. Thickness: 1-3/4 inches
      c. Face: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum A40 coating.
      d. Edge Construction: Model 2, Seamless.
      e. Core: Polyisocyanurate or Mineral board.
         1) Thermal-Rated Doors: Provide doors fabricated with thermal-resistance value (R-value) of not less than 2.1 deg F x h x sq. ft./Btu when tested according to ASTM C 1363.
   3. Frames:
      a. Materials: Metallic-coated steel sheet, minimum thickness of 0.053 inch, with minimum A40 coating.
      b. Construction: Full profile welded.
   4. Exposed Finish: Primed for field coating.

2.5 BORROWED LITES

A. Hollow-metal frames of uncoated steel sheet, minimum thickness of 0.053 inch.

B. Construction: Full profile welded.
   1. Exposed Finish: Primed for field coating.

2.6 FRAME ANCHORS

A. Jamb Anchors:
   1. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inch thick.

B. Floor Anchors: Formed from same material as frames, minimum thickness of 0.042 inch, and as follows:
   1. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.
2. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at finish floor surface.

2.7 MATERIALS

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.

C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.

D. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B.

E. Frame Anchors: ASTM A 879/A 879M, Commercial Steel (CS), 04Z coating designation; mill phosphatized.

1. For anchors built into exterior walls, steel sheet complying with ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, hot-dip galvanized according to ASTM A 153/A 153M, Class B.

F. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A 153/A 153M.

G. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.

H. Grout: ASTM C 476, except with a maximum slump of 4 inches, as measured according to ASTM C 143/C 143M.

I. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.

J. Glazing: Comply with requirements in Section 088000 "Glazing."

K. Bituminous Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.8 FABRICATION

A. Fabricate hollow-metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for metal thickness. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.

B. Hollow-Metal Doors:
1. Steel-Stiffened Door Cores: Provide minimum thickness 0.026 inch, steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than 6 inches apart. Spot weld to face sheets no more than 5 inches o.c. Fill spaces between stiffeners with glass- or mineral-fiber insulation.

2. Fire Door Cores: As required to provide fire-protection[ and temperature-rise] ratings indicated.

4. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets.

5. Bottom Edge Closures: Close bottom edges of doors with end closures or channels of same material as face sheets.

6. Exterior Doors: Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.

7. Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch beyond edge of door on which astragal is mounted or as required to comply with published listing of qualified testing agency.

C. Hollow-Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.

1. Sidelite Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.

2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.

3. Grout Guards: Weld guards to frame at back of hardware mortises in frames to be grouted.

4. Floor Anchors: Weld anchors to bottoms of jambs with at least four spot welds per anchor; however, for slip-on drywall frames, provide anchor clips or countersunk holes at bottoms of jambs.

5. Jamb Anchors: Provide number and spacing of anchors as follows:
   a. Stud-Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
      1) Four anchors per jamb from 60 to 90 inches high.
      2) Five anchors per jamb from 90 to 96 inches high.
   b. Compression Type: Not less than two anchors in each frame.
   c. Postinstalled Expansion Type: Locate anchors not more than 6 inches from top and bottom of frame. Space anchors not more than 26 inches o.c.

6. Head Anchors: Two anchors per head for frames more than 42 inches wide and mounted in metal-stud partitions.

7. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Keep holes clear during construction.
   a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
   b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.

8. Terminated Stops: Terminate stops 6 inches above finish floor with a 45-degree angle cut, and close open end of stop with steel sheet closure. Cover opening in extension of frame with welded-steel filler plate, with welds ground smooth and flush with frame.

D. Fabricate concealed stiffeners and edge channels from either cold- or hot-rolled steel sheet.
E. Hardware Preparation: Factory prepare hollow-metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, the Door Hardware Schedule, and templates.

1. Reinforce doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.
2. Comply with applicable requirements in SDI A250.6 and BHMA A156.115 for preparation of hollow-metal work for hardware.

F. Stops and Moldings: Provide stops and moldings around glazed lites and louvers where indicated. Form corners of stops and moldings with [butted] [or] [mitered] hairline joints.

1. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of hollow-metal work.
2. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.
3. Provide loose stops and moldings on inside of hollow-metal work.
4. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.

2.9 STEEL FINISHES

A. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.

1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

B. Field-Applied Finish: Finish hollow metal doors and frames in accordance with Section 099600 “High-performance Coatings.”

1. Color and Gloss: As selected by Architect from manufacturer's full range.

2.10 ACCESSORIES

A. Louvers: Provide louvers for interior doors, where indicated, which comply with SDI 111C, with blades or baffles formed of 0.020-inch- thick, cold-rolled steel sheet set into 0.032-inch- thick steel frame.

1. Sightproof Louver: Stationary louvers constructed with inverted-V or inverted-Y blades.

B. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.

C. Grout Guards: Formed from same material as frames, not less than 0.016 inch thick.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.
C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install hollow-metal work plumb, rigid, properly aligned, and securely fastened in place. Comply with Drawings and manufacturer’s written instructions.

B. Hollow-Metal Frames: Install hollow-metal frames for doors, transoms, sidelites, borrowed lites, and other openings, of size and profile indicated. Comply with SDI A250.11 or NAAMM-HMMA 840 as required by standards specified.

1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
   a. At fire-rated openings, install frames according to NFPA 80.
   b. Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
   c. Install frames with removable stops located on secure side of opening.
   d. Install door silencers in frames before grouting.
   e. Remove temporary braces necessary for installation only after frames have been properly set and secured.
   f. Check plumb, square, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
   g. Field apply bituminous coating to backs of frames that will be filled with grout containing antifreezing agents.

2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
   a. Floor anchors may be set with power-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.

4. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.

5. Concrete Walls: Solidly fill space between frames and concrete with mineral-fiber insulation.

6. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

7. In-Place Metal or Wood-Stud Partitions: Secure slip-on drywall frames in place according to manufacturer’s written instructions.
8. **Installation Tolerances:** Adjust hollow-metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
   a. **Squareness:** Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   b. **Alignment:** Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
   c. **Twist:** Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   d. **Plumbness:** Plus or minus 1/16 inch, measured at jambs at floor.

C. **Hollow-Metal Doors:** Fit hollow-metal doors accurately in frames, within clearances specified below. Shim as necessary.
   1. **Non-Fire-Rated Steel Doors:**
      a. Between Door and Frame Jambs and Head: 1/8 inch plus or minus 1/32 inch.
      b. Between Edges of Pairs of Doors: 1/8 inch to 1/4 inch plus or minus 1/32 inch.
      c. At Bottom of Door: [3/4 inch] [5/8 inch] plus or minus 1/32 inch.
      d. Between Door Face and Stop: 1/16 inch to 1/8 inch plus or minus 1/32 inch.
   2. **Fire-Rated Doors:** Install doors with clearances according to NFPA 80.
   3. **Smoke-Control Doors:** Install doors and gaskets according to NFPA 105.

D. **Glazing:** Comply with installation requirements in Section 088000 "Glazing" and with hollow-metal manufacturer's written instructions.
   1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.

### 3.4 ADJUSTING AND CLEANING

A. **Final Adjustments:** Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow-metal work that is warped, bowed, or otherwise unacceptable.

B. **Remove grout and other bonding material from hollow-metal work immediately after installation.**

C. **Prime-Coat Touchup:** Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.

D. **Metallic-Coated Surface Touchup:** Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.

E. **Touchup Painting:** Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.

END OF SECTION
SECTION 081416 - FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Solid-core doors with wood-veneer and plastic-laminate faces.
   2. Factory finishing flush wood doors.
   3. Factory fitting flush wood doors to frames and factory machining for hardware.

B. Related Requirements:
   1. Section 081113 "Hollow-Metal Doors and Frames" for frames in which to install wood doors.
   2. Section 088000 "Glazing" for glass view panels in flush wood doors.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of door. Include details of core and edge construction[, louvers,] and trim for openings. Include factory-finishing specifications.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; and the following:
   1. Dimensions and locations of blocking.
   2. Dimensions and locations of mortises and holes for hardware.
   3. Dimensions and locations of cutouts.
   4. Undercuts.
   5. Requirements for veneer matching.
   6. Doors to be factory finished and finish requirements.
   7. Fire-protection ratings for fire-rated doors.

D. Samples for Verification:
   1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches, for each material and finish. For each wood species and transparent finish, provide set of three Samples showing typical range of color and grain to be expected in finished Work.
   2. Corner sections of doors, approximately 8 by 10 inches, with door faces and edges representing actual materials to be used.
      a. Provide Samples for each species of veneer and solid lumber required.
      b. Finish veneer-faced door Samples with same materials proposed for factory-finished doors.
   3. Frames for light openings, 6 inches long, for each material, type, and finish required.
1.4 INFORMATIONAL SUBMITTALS
A. Quality Standard Compliance Certificates: AWI Quality Certification or WI Certified Compliance Program certificates.

1.5 QUALITY ASSURANCE
A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body and is a certified participant in AWI's Quality Certification Program or is a licensee of WI's Certified Compliance Program.
B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.6 DELIVERY, STORAGE, AND HANDLING
A. Comply with requirements of referenced standard and manufacturer's written instructions.
B. Package doors individually in cardboard cartons and wrap bundles of doors in plastic sheeting.
C. Mark each door ontop and bottom rail with opening number used on Shop Drawings.

1.7 FIELD CONDITIONS
A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 43 and 70 percent during remainder of construction period.

1.8 WARRANTY
A. Special Warranty: Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
   a. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
   b. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.
2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.

PART 2 - PRODUCTS

2.1 MANUFACTURERS
A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Ampco.
2. Eggers Industries.
3. Graham Wood Doors; an Assa Abloy Group company.
5. VT Industries, Inc.

B. Source Limitations: Obtain flush wood doors from single manufacturer.

2.2 FLUSH WOOD DOORS, GENERAL

A. Quality Standard: In addition to requirements specified, comply with AWI's, AWMAC's, and WI's "Architectural Woodwork Standards."
   1. Provide AWI Quality Certification or WI Certified Compliance Labels indicating that doors comply with requirements of grades specified.
   2. Contract Documents contain selections chosen from options in quality standard and additional requirements beyond those of quality standard. Comply with those selections and requirements in addition to quality standard.

B. Regional Materials: Flush wood doors shall be manufactured within 100 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

C. Certified Wood: Flush wood doors shall be certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and to FSC STD-40-004, "FSC Standard for Chain of Custody Certification."

D. Low-Emitting Materials: Fabricate doors with adhesives and composite wood products that do not contain urea formaldehyde.

E. WDMA I.S.1-A Performance Grade:
   1. Heavy Duty unless otherwise indicated.
   2. Extra Heavy Duty: Classrooms, public toilets, janitor's closets and exits, unless indicated to be hollow metal.

F. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252.
   1. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
   2. Cores: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
   3. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.
   4. Pairs: Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.
   5. Pairs: Provide formed-steel edges and astragals with intumescent seals.
      a. Finish steel edges and astragals with baked enamel same color as doors.
      b. Finish steel edges and astragals to match door hardware (locksets or exit devices).
G. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control, based on testing according to UL 1784.

H. Particleboard-Core Doors:
1. Particleboard: ANSI A208.1, Grade LD-2, made with binder containing no urea-formaldehyde.
2. Particleboard: Straw-based particleboard complying with ANSI A208.1, Grade LD-2 or M-2, except for density.
3. Blocking: Provide wood blocking in particleboard-core doors as needed to eliminate through-bolting hardware.
4. Provide doors with structural-composite-lumber cores instead of particleboard cores for doors indicated to receive exit devices.

I. Structural-Composite-Lumber-Core Doors:
   a. Screw Withdrawal, Face: 700 lbf.
   b. Screw Withdrawal, Edge: 400 lbf.

J. Mineral-Core Doors:
1. Core: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
2. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated as needed to eliminate through-bolting hardware.
3. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.

2.3 VENEER-FACED DOORS FOR TRANSPARENT FINISH

A. Interior Solid-Core Doors:
1. Grade: Premium, with Grade A faces.
2. Species and Cut: Match Architect's Samples.
4. Assembly of Veneer Leaves on Door Faces: Center-balance match.
5. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions.
6. Room Match: Provide door faces of compatible color and grain within each separate room or area of building.
7. Exposed Vertical and Top Edges: Applied wood-veneer edges of same species as faces and covering edges of faces - edge Type B.
8. Core: Particleboard, except for through-bolt locations.
9. Construction: Five or seven plies. Stiles and rails are bonded to core, then entire unit is abrasive planed before veneering. Faces are bonded to core using a hot press.

2.4 LIGHT FRAMES AND LOUVERS

A. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads unless otherwise indicated.
FLUSH WOOD DOORS

1. Wood Species: Species compatible with door faces.
2. Profile: Recessed tapered beads.
3. At wood-core doors with 20-minute fire-protection ratings, provide wood beads and metal glazing clips approved for such use.

B. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-veneer noncombustible beads matching veneer species of door faces and approved for use in doors of fire-protection rating indicated. Include concealed metal glazing clips where required for opening size and fire-protection rating indicated.

2.5 FABRICATION

A. Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
   1. Comply with NFPA 80 requirements for fire-rated doors.

B. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, BHMA-156.115-W, and hardware templates.
   1. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
   2. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.

C. Transom and Side Panels: Fabricate matching panels with same construction, exposed surfaces, and finish as specified for associated doors. Finish bottom edges of transoms and top edges of rabbeted doors same as door stiles.
   1. Fabricate door and transom panels with full-width, solid-lumber[, rabbeted,] meeting rails. Provide factory-installed spring bolts for concealed attachment into jambs of metal door frames.

D. Openings: Factory cut and trim openings through doors.
   1. Light Openings: Trim openings with moldings of material and profile indicated.
   2. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Section 088000 "Glazing."

2.6 SHOP PRIMING

A. Doors for Transparent Finish: Shop prime faces and all four edges with stain (if required), other required pretreatments, and first coat of finish as specified in Section 099300 "Staining and Transparent Finishing." Seal edges of cutouts and mortises with first coat of finish.

2.7 FACTORY FINISHING

A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
   1. Finish faces, all four edges, edges of cutouts, and mortises. Stains and fillers may be omitted on top and bottom edges, edges of cutouts, and mortises.
B. Factory finish doors that are indicated to receive transparent finish.

C. Transparent Finish:
   1. Grade: Premium.
   2. Finish: AWI's, AWMAC's, and WI's "Architectural Woodwork Standards" System 9, UV curable, acrylated epoxy, polyester, or urethane.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and installed door frames, with Installer present, before hanging doors.
   1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
   2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Hardware: For installation, see Section 087100 "Door Hardware." Installation Instructions: Install doors to comply with manufacturer's written instructions and referenced quality standard, and as indicated.
   1. Install fire-rated doors according to NFPA 80.
   2. Install smoke- and draft-control doors according to NFPA 105.

B. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
   1. Clearances: Provide 1/8 inch at heads, jambs, and between pairs of doors. Provide 1/8 inch from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide 1/4 inch from bottom of door to top of threshold unless otherwise indicated.
      a. Comply with NFPA 80 for fire-rated doors.
      b. 2. Bevel non-fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.

C. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.

D. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

A. Operation: Rehang or replace doors that do not swing or operate freely.
B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION
SECTION 083113 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section includes access doors and frames for walls and ceilings.
   B. Related Requirements:
      1. Section 077200 "Roof Accessories" for roof hatches.
      2. Division 23 Section for "Air Duct Accessories" for heating and air-conditioning duct access doors.

1.3 ACTION SUBMITTALS
   A. Product Data: For each type of product.
      1. Include construction details, fire ratings, material descriptions, dimensions of individual components and profiles, and finishes.
   B. Sustainable Design Submittals required by Section 01813 applicable to this Section.
   C. Samples: For each type of access door and frame and for each finish specified, complete assembly minimum 6 by 6 inches in size.
   D. Product Schedule: For access doors and frames.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS
   A. Fire-Rated Access Doors and Frames: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection[ and temperature-rise limit] ratings indicated, according to NFPA 252 or UL 10B.

2.2 ACCESS DOORS AND FRAMES
   A. Recessed Access Doors with Concealed Flanges:
      1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
         a. Babcock-Davis.
b. JL Industries, Inc.; a division of the Activar Construction Products Group.

d. Larsens Manufacturing Company.

e. Nystrom, Inc.

f. Williams Bros. Corporation of America (The).

2. Description: Door face recessed 5/8 inch for gypsum board infill; with concealed flange for gypsum board installation and concealed hinge.

3. Locations: Wall.

4. Door Size: Minimal, as indicated or required to access device or fixture.

5. Uncoated Steel Sheet for Door: Nominal 0.060 inch, 16 gage, factory primed paint-ready. Typical, except as indicated.

6. Metallic-Coated Steel Sheet for Door: Nominal 0.064 inch, 16 gage, factory primed paint-ready. Use at wet areas.

7. Latch and Lock: Cam latch, screwdriver operated.

B. Drop-in Ceiling Access Panels and Frames:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Lift & Shift Access Panels as manufactured by IntexForms, Inc., or comparable by one of the following:

   a. Castle Access Panels and Forms, Inc.
   
   b. Nystrom, Inc.
   
   c. Wind-Lock Stealth Access Panels

2. Description: Glass fiber reinforced gypsum drop-in/pop-up panel, 1/2 inch or 5/8 inch deep for ceiling access to match gypsum board.

3. Locations: Non-rated gypsum board ceilings.

4. Door Size: Minimal, as indicated or required to access device or fixture.

5. Shape: Radius corner.

7. Flange: Drywall bead.

C. Exterior Flush Access Doors:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Babcock-Davis.
   
   b. JL Industries, Inc.; a division of the Activar Construction Products Group.
   
   
   d. Larsens Manufacturing Company.
   
   e. Nystrom, Inc.
   
   f. Williams Bros. Corporation of America (The).

2. Description: Weatherproof assembly, with face of door fit flush with frame and with exposed frame. Include extruded door gaskets and minimum 2-inch-thick fiberglass insulation. At plaster ceilings, use recessed type with concealed hinges, for application of plaster infill.

3. Locations: Wall and soffit.

4. Door Size: Minimal, as indicated or required to access device or fixture.

5. Metallic-Coated Steel Sheet for Door: Nominal 0.064 inch, 16 gage, factory primed paint-ready.

6. Frame Material: Same material, thickness, and finish as door.

7. Latch and Lock: Cam latch operated by handle, with keyed lock in handle.
2.3 **FIRE-RATED ACCESS DOORS AND FRAMES**

A. **Fire-Rated, Flush Access Doors with Concealed Flanges:**
   1. **Manufacturers:** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Babcock-Davis.
      b. JL Industries, Inc.; a division of the Activar Construction Products Group.
      d. Nystrom, Inc.
      e. Williams Bros. Corporation of America (The).
   2. **Description:** Door face flush with frame, with a core of mineral-fiber insulation enclosed in sheet metal; with concealed flange for gypsum board installation, self-closing door, and concealed hinge.
   3. **Locations:** Wall and ceiling.
   4. **Door Size:** Minimal, as indicated or required to access device or fixture.
   5. **Fire-Resistance Rating:** Not less than that of adjacent construction.
   6. **Temperature-Rise Rating:** If required in exit enclosures, 450 deg F at the end of 30 minutes.
   7. **Uncoated Steel Sheet for Door:** Nominal 0.036 inch, 20 gage, factory primed paint-ready.
   8. **Frame Material:** Same material, thickness, and finish as door.
   9. **Latch and Lock:** Self-closing, self-latching door hardware, screw-driver operated.

2.4 **MATERIALS**

A. **Steel Plates, Shapes, and Bars:** ASTM A 36/A 36M.

B. **Steel Sheet:** Uncoated or electrolytic zinc coated, ASTM A 879/A 879M, with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.

C. **Metallic-Coated Steel Sheet:** ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 or A60 metallic coating.

D. **Frame Anchors:** Same material as door face.

E. **Inserts, Bolts, and Anchor Fasteners:** Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

2.5 **FABRICATION**

A. **General:** Provide access door and frame assemblies manufactured as integral units ready for installation.

B. **Metal Surfaces:** For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

C. **Doors and Frames:** Grind exposed welds smooth and flush with adjacent surfaces. Furnish mounting holes, attachment devices and fasteners of type required to secure access doors to types of supports indicated.
1. For concealed flanges with drywall bead, provide edge trim for gypsum panels securely attached to perimeter of frames.
2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded-metal lath and exposed casing bead welded to perimeter of frames.

D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling. Provide access sleeves for each latch operator and install in holes cut through finish.

1. For recessed doors with plaster infill, provide self-furring expanded-metal lath attached to door panel.

E. Latch and Lock Hardware:

1. Quantity: Furnish number of latches and locks required to hold doors tightly closed.
2. Keys: Furnish two keys per lock and key all locks alike.

2.6 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Painted Finishes: Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

1. Factory Primed: Apply manufacturer's standard, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions for installing access doors and frames.
3.3 ADJUSTING
A. Adjust doors and hardware, after installation, for proper operation.

END OF SECTION
SECTION 083473.13 - METAL SOUND CONTROL DOOR ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes metal sound control door assemblies.

1.3 COORDINATION

A. Coordinate installation of anchorages for sound control door assemblies. Furnish setting drawings, templates, and directions for installing anchorages. Deliver sleeves, inserts, anchor bolts, and items with integral anchors to Project site in time for installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product. Include sound ratings, construction details, material descriptions, core descriptions, fire-resistance rating, and finishes.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For sound control door assemblies.
   1. Include elevations of each door design.
   2. Include details of sound control seals, door bottoms, and thresholds.
   3. Include details of doors, including vertical- and horizontal-edge details and metal thicknesses.
   4. Include frame details for each frame type, including dimensioned profiles and metal thicknesses.
   5. Include locations of reinforcements and preparations for hardware.
   6. Include details of each different wall opening condition.
   7. Include details of anchorages, joints, field splices, and connections.
   8. Include details of accessories.
   9. Include details of conduits and preparations for power, signal, and control systems.

D. Samples for Verification: For each type of exposed finish not less than 3 by 5 inches
   1. Doors and Frames: Samples approximately 12 by 12 inches
      a. Doors: Include section of vertical-edge, top, and bottom construction; automatic door bottom or gasket; core construction; [glazing; ]and hinge and other applied hardware reinforcement.
      b. Frames: Include profile, corner joint, floor and wall anchors, and seals.

E. Schedule: Provide a schedule of sound control door assemblies prepared using same reference numbers for details and openings as those on Drawings. Coordinate with the Door Hardware Schedule.
1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sound control door assemblies to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Product Certificates: For each type of sound control door assembly.
   3. Product Test Reports: For each sound control door assembly, for tests performed by manufacturer and witnessed by a qualified testing agency or performed by a qualified testing agency.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver doors and frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Avoid the use of nonvented plastic.
   1. Provide additional protection to prevent damage to factory-finished units.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store doors and frames vertically under cover at Project site with head up. Place on minimum 4-inch-high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of sound control door assemblies that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Failure to meet sound rating requirements.
      b. Faulty operation of sound seals.
      c. Deterioration of metals, metal finishes, and other materials beyond normal use or weathering.
   2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Sound Rating: Provide sound control door assemblies identical to those of assemblies tested as sound-retardant units by an acoustical testing agency, and have the following minimum rating:
1. STC Rating: Not less than 45 as calculated by ASTM E 413 when tested in an operable condition according to ASTM E 90.

B. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
   1. Smoke- and Draft Control Assemblies: Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.

2.2 STEEL SOUND CONTROL DOORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Ambico Limited.
   2. Amweld International, LLC.
   4. Overly Door Company.

B. Source Limitations: Obtain steel sound control door assemblies, including doors, frames, sound control seals, hinges, thresholds, and other items essential for sound control, from single source from single manufacturer.

C. Doors: Flush-design sound control doors, thickness as required to provide STC rating, of seamless construction; with manufacturer's standard sound-retardant core as required to provide STC and fire rating indicated. Construct doors with smooth, flush surfaces without visible joints or seams on exposed faces or stile edges. Fabricate according to NAAMM-HMMA 865.
   1. Interior Doors: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.048-inch nominal thickness or thicker as required to achieve STC rating indicated.
   2. Core: Manufacturer's standard sound control core.
   3. Top and Bottom Channels: Closed with continuous channels of same material as face sheets, spot welded to face sheets not more than 6 inches o.c.
   4. Hardware Reinforcement: Same material as face sheets.

D. Materials:
   1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.

E. Finishes:
   1. Prime Finish: Apply manufacturer's standard primer immediately after cleaning and pretreating.
      a. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
2.3 SOUND CONTROL FRAMES

A. Frames: Fabricate sound control door frames with corners mitered, reinforced, and continuously welded the full depth and width of frame. Fabricate according to NAAMM-HMMA 865.
   1. Weld frames according to NAAMM-HMMA 820.
   2. Interior Frames: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.075-inch nominal thickness or thicker as required to provide STC rating indicated.
   3. Hardware Reinforcement: Fabricate according to NAAMM-HMMA 865 of same material as face sheets.
   4. Head Reinforcement: Metallic-coated steel channel or angle stiffener, 0.108-inch nominal thickness.
   5. Jamb Anchors:
      a. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.048-inch nominal-thickness uncoated steel unless otherwise indicated.
   6. Floor Anchors: Not less than 0.079-inch nominal-thickness metallic-coated steel, and as follows:
      a. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.

B. Materials:
   1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
   2. Supports and Anchors: After fabricating, galvanize units to be built into exterior walls according to ASTM A 153/A 153M, Class B.
   3. Inserts, Bolts, and Fasteners: Provide items to be built into exterior walls, hot-dip galvanized according to ASTM A 153/A 153M or ASTM F 2329.
   4. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching sound control door frames of type indicated.

C. Finishes:
   1. Prime Finish: Apply manufacturer's standard primer immediately after cleaning and pretreating.
      a. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

2.4 HARDWARE

A. Sound Control Door Hardware: Manufacturer's standard sound control system, including head and jamb seals, door bottoms, cam-lift hinges, and thresholds, as required by testing to achieve STC and fire rating indicated.
   1. Head and Jamb Seals: One of the following:
a. Neoprene Compression Seals: One-piece units consisting of closed-cell sponge neoprene seal held in place by metal retainer, with retainer cover of same material as door frame; attached to door frame with concealed screws.
b. Silicone Compression Seals: One-piece units consisting of silicone compression bulb and stabilizer flange; attached to door frame adhesively.
c. Magnetic Seals: One-piece units consisting of closed-cell sponge neoprene seal and resiliently mounted magnet held in place by metal retainer, with retainer cover of same material as door frame; attached to door frame with concealed screws.

2. Automatic Door Bottoms: Neoprene or silicone gasket, held in place by metal housing, that automatically drops to form seal when door is closed; mounted to bottom edge of door with screws.
   a. Mounting: Mortised or semimortised into bottom of door as required by testing to achieve STC rating indicated.

3. Cam-Lift Hinges: Full-mortise template type that raises door 1/2 inch when door is fully open; with hardened pin; fabricated from stainless steel.
4. Thresholds: Flat, smooth, unfluted type as recommended by manufacturer; fabricated from aluminum.
   a. Finish: Clear anodic finish.

2.5 FABRICATION

A. Steel Sound Control Door Fabrication: Sound control doors to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
   1. Comply with requirements in NFPA 80 for fire-rated and smoke control doors.
   2. Seamless Edge Construction: Fabricate doors with faces joined at vertical edges by welding; welds shall be ground, filled, and dressed to make them invisible and to provide a smooth, flush surface.
   3. Hardware Preparation: Factory prepare sound control doors to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping.
      a. Reinforce doors to receive nontemplated mortised and surface-mounted door hardware.
      b. Locate door hardware as indicated, or if not indicated, according to NAAMM-HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
   4. Tolerances: Fabricate doors to tolerances indicated in NAAMM-HMMA 865.

B. Sound Control Frame Fabrication: Fabricate sound control frames to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
   1. Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated from same thickness metal as frames.
   2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
   3. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
   4. Jamb Anchors: Provide number and spacing of anchors as follows:
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Prior to installation, adjust and securely brace sound control door frames to the following tolerances:
   1. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   2. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
   3. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   4. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.

C. Drill and tap doors and frames to receive nontemplated mortised and surface-mounted door hardware.
3.3 INSTALLATION

A. General: Install sound control door assemblies plumb, rigid, properly aligned, and securely fastened in place; comply with manufacturer's written instructions.

B. Frames: Install sound control door frames in sizes and profiles indicated.
   1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
      a. At fire-rated openings, install frames according to NFPA 80.
      b. At openings requiring smoke and draft control, install frames according to NFPA 105.
      c. Where frames are fabricated in sections due to shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, and dress; make splice smooth, flush, and invisible on exposed faces.
      d. Remove temporary braces only after frames or bucks have been properly set and secured.
      e. Check squareness, twist, and plumbness of frames as walls are constructed. Shim as necessary to comply with installation tolerances.

   2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.

   4. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.

   5. Installation Tolerances: Adjust sound control door frames for squareness, alignment, twist, and plumbness to the following tolerances:
      a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
      b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
      c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
      d. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.

C. Doors: Fit sound control doors accurately in frames, within clearances indicated below. Shim as necessary.
   1. Non-Fire-Rated Doors: Fit non-fire-rated doors accurately in frames with the following clearances:
      b. Head with Butt Hinges: 1/8 inch.
      c. Head with Cam-Lift Hinges: As required by manufacturer, but not more than 3/8 inch.
      d. Sill: Manufacturer’s standard.
      e. Between Edges of Pairs of Doors: 1/8 inch.

   2. Fire-Rated Doors: Install fire-rated doors with clearances according to NFPA 80.

D. Sound Control Seals: Where seals have been factory prefit and preinstalled and subsequently removed for shipping, reinstall seals and adjust according to manufacturer’s written instructions.
E. Cam-Lift Hinges: Install hinges according to manufacturer's written instructions.

F. Thresholds: Set thresholds in full bed of sealant complying with requirements in Section 079200 "Joint Sealants."

3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and adjust seals, door bottoms, and other sound control hardware items right before final inspection. Leave work in complete and proper operating condition.

B. Remove and replace defective work, including defective or damaged sound seals and doors and frames that are warped, bowed, or otherwise unacceptable.
   1. Adjust gaskets, gasket retainers, and retainer covers to provide contact required to achieve STC rating.

C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible, rust-inhibitive, air-drying primer.

END OF SECTION
SECTION 084113 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Storefront framing for punched openings.
   2. Exterior manual-swing entrance doors and door-frame units.

B. Related Requirements:
   1. Section 084216 "Interior Aluminum Storefront Frames" for interior storefront/officefront aluminum frames.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Conference shall be held at least two weeks prior to fabrication and/or installation of storefront system. Arrange meeting at Project site with the glazier, sealant, and gasket manufacturers’ technical representatives and any others necessary to review procedures, products to be used, and schedule for the Work. Give at least two weeks notice to Architect and other concerned parties.

1.4 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 080413.

B. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Shop Drawings: For aluminum-framed entrances and storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.
   1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
   2. Include full-size isometric details of each vertical-to-horizontal intersection of aluminum-framed entrances and storefronts, showing the following:
      a. Joinery, including concealed welds.
b. Anchorage.
c. Expansion provisions.
d. Glazing.
e. Flashing and drainage.

3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.

E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

F. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:
   1. Joinery, including concealed welds.
   2. Expansion provisions.
   4. Flashing and drainage.

G. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

H. Delegated-Design Submittal: For aluminum-framed entrances and storefronts indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For aluminum-framed entrances and storefronts to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
   1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

C. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Energy Performance Certificates: For aluminum-framed entrances and storefronts, accessories, and components, from manufacturer.
      a. Basis for Certification: NFRC-certified energy performance values for each aluminum-framed entrance and storefront.
3. Product Test Reports: For aluminum-framed entrances and storefronts, for tests performed by manufacturer and witnessed by a qualified testing agency or by a qualified testing agency.

4. Field quality-control reports.

1.7 MOCKUPS

A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical wall area as shown on Drawings.
2. Testing shall be performed on mockups according to requirements in "Field Quality Control" Article.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Structural failures including, but not limited to, excessive deflection.
   b. Noise or vibration created by wind and thermal and structural movements.
   c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   d. Water penetration through fixed glazing and framing areas.
   e. Failure of operating components.

2. Warranty Period: Five years from date of Substantial Completion.

B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
   a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
   b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
   c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design aluminum-framed entrances and storefronts.
B. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrances and storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. Aluminum-framed entrances and storefronts shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.

2. Failure also includes the following:
   a. Thermal stresses transferring to building structure.
   b. Glass breakage.
   c. Noise or vibration created by wind and thermal and structural movements.
   d. Loosening or weakening of fasteners, attachments, and other components.
   e. Failure of operating units.

C. Structural Loads:

1. Wind and Seismic Loads: As indicated on Drawings.

2. Other Design Loads: As indicated on Drawings.

D. Deflection of Framing Members: At design wind pressure, as follows:

1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.

2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch.
   a. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.

3. Cantilever Deflection: Where framing members overhang an anchor point, as follows:
   a. Perpendicular to Plane of Wall: No greater than 1/240 of clear span plus 1/4 inch for spans greater than 11 feet 8-1/4 inches or 1/175 times span, for spans less than 11 feet 8-1/4 inches.

E. Structural: Test according to ASTM E 330 as follows:

1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.

2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.

3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

F. Air Infiltration: Test according to ASTM E 283 for infiltration as follows:

1. Fixed Framing and Glass Area:
   a. Maximum air leakage of 0.06 cfm/sq. ft. (0.30 L/s per sq. m) at a static-air-pressure differential of 6.24 lbf/sq. ft.300 Pa.

2. Entrance Doors:
   a. Pair of Doors: Maximum air leakage of 1.0 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft.
   b. Single Doors: Maximum air leakage of 0.5 cfm/sq. ft. (2.54 L/s per sq. m) at a static-air-pressure differential of 1.57 lbf/sq. ft.
G. Water Penetration under Static Pressure: Test according to ASTM E 331 as follows:
   1. No evidence of water penetration through fixed glazing and framing areas when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).

H. Water Penetration under Dynamic Pressure: Test according to AAMA 501.1 as follows:
   1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).
   2. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

I. Seismic Performance: Aluminum-framed entrances and storefronts shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

J. Energy Performance: Certify and label energy performance according to NFRC as follows:
   1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than 0.45 Btu/sq. ft. x h x deg F as determined according to NFRC 100.
   2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.35 as determined according to NFRC 200.
   3. Condensation Resistance: Design the wall and its components to not develop any visible interior condensation on framing members or glazing when the exterior air dry bulb temperature is 35 degrees F and the interior air dry bulb temperature is 65 degrees F with a 45 percent relative humidity.

K. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
   1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
   2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.
      a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F.
      b. Low Exterior Ambient-Air Temperature: 0 deg F.
      c. Interior Ambient-Air Temperature: 75 deg F.

2.2 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide listed products as manufactured by Kawneer North America; an Alcoa company, or comparable product by one of the following:
   1. EFCO Corporation.
   2. Vistawall Architectural Products; Oldcastle BuildingEnvelope.

2.3 BASIS-OF-DESIGN PRODUCTS

A. Selected Products:
   1. Punched Window at Brick: Kawneer; TriFab 601UT; 2-inch by 6-inch.
2. Punched Window at Plaster: Kawneer; TriFab 451UT; 2-inch by 4-1/2-inch

B. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, including framing and accessories, from single manufacturer.

2.4 FRAMING

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
   1. Construction: Thermally broken; sizes as indicated.
   2. Glazing System: Retained mechanically with gaskets on four sides.
   5. Fabrication Method: Field-fabricated stick system.

B. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

D. Materials:
   1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
      a. Sheet and Plate: ASTM B 209.
      b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
      c. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
      d. Structural Profiles: ASTM B 308/B 308M.
   2. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM, and prepare surfaces according to applicable SSPC standard.
      a. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
      b. Cold-Rolled Sheet and Strip: ASTM A 1008/A 1008M.
      c. Hot-Rolled Sheet and Strip: ASTM A 1011/A 1011M.

2.5 INSULATED METAL PANELS

A. Insulated Metal Panels: Laminated, metal-faced flat panels with no deviations in plane exceeding 0.8 percent of panel dimension in width or length.
   1. Overall Panel Thickness: 1 inch.
   2. Exterior Skin: Aluminum.
      a. Thickness: Manufacturer's standard for finish and texture indicated.
      b. Finish: Match framing system.
      c. Texture: Smooth.
      d. Backing Sheet: 0.157-inch thick, cement board.
   3. Interior Skin: Aluminum.
      a. Thickness: Manufacturer's standard for finish and texture indicated.
      b. Finish: Low-gloss, white baked enamel.
      c. Texture: Smooth.
d. Backing Sheet: 1/2-inch-thick, gypsum board with proprietary fire-resistance-rated core.

4. Thermal Insulation Core: Manufacturer's standard rigid, closed-cell, polyisocyanurate board.

B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: 25 or less.
   2. Smoke-Developed Index: 450 or less.

2.6 ENTRANCE DOOR SYSTEMS

A. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing operation.
   1. Door Construction: 1-3/4-inch overall thickness, with minimum 0.125-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
      a. Thermal Construction: High-performance plastic connectors separate aluminum members exposed to the exterior from members exposed to the interior.
   2. Door Design: As indicated.
      a. Provide 10-inch bottom rail to comply with accessibility requirements.
      a. Provide nonremovable glazing stops on outside of door.

2.7 ENTRANCE DOOR HARDWARE

A. Entrance Door Hardware: Hardware not specified in this Section is specified in Section 087100 "Door Hardware."

B. General: Provide entrance door hardware and entrance door hardware sets indicated in door and frame schedule for each entrance door to comply with requirements in this Section.
   1. Entrance Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and named manufacturers' products or products equivalent in function and comparable in quality to named products.
   2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
   3. Opening-Force Requirements:
      a. Egress Doors: Not more than 15 lbf to release the latch and not more than 30 lbf to set the door in motion and not more than 15 lbf to open the door to its minimum required width.
      b. Accessible Interior Doors: Not more than 5 lbf to fully open door.

C. Cylinders: As specified in Section 087100 "Door Hardware."
   1. Keying: Master key system. Permanently inscribe each key with a visual key control number and include notation "DO NOT DUPLICATE".

D. Weather Stripping: Manufacturer's standard replaceable components.
1. Compression Type: Made of ASTM D 2000, molded neoprene, or ASTM D 2287, molded PVC.
2. Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

E. Thresholds: BHMA A156.21, raised thresholds beveled with a slope of not more than 1:2, with maximum height of 1/2 inch in accordance with CBC Title 24 Chapter 11B.

2.8 GLAZING

A. Glazing: Comply with Section 088000 "Glazing."

B. Glazing Gaskets: Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.

C. Glazing Sealants: As recommended by manufacturer.

D. Sealants used inside the weatherproofing system shall have a VOC content of 250 g/L.

E. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.9 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.

2. Reinforce members as required to receive fastener threads.

B. Anchors: Three-way adjustable anchors with minimum adjustment of [1 inch] <Insert dimension> that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

C. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials or Dead-soft, 0.018-inch thick stainless steel, ASTM A 240/A 240M of type recommended by manufacturer.

D. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.10 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

C. Fabricate components that, when assembled, have the following characteristics:
1. Profiles that are sharp, straight, and free of defects or deformations.
2. Accurately fitted joints with ends cope or mitered.
3. Physical and thermal isolation of glazing from framing members.
4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
5. Provisions for field replacement of glazing from exterior.
6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.

D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.

E. Storefront Framing: Fabricate components for assembly using shear-block system.

F. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
   1. At exterior doors, provide compression weather stripping at fixed stops.

G. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
   1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
   2. At exterior doors, provide weather sweeps applied to door bottoms.

H. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.

I. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.11 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   1. Color and Gloss: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General:
1. Comply with manufacturer's written instructions.
2. Do not install damaged components.
3. Fit joints to produce hairline joints free of burrs and distortion.
4. Rigidly secure nonmovement joints.
5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
6. Seal perimeter and other joints watertight unless otherwise indicated.

B. Metal Protection:
   1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
   2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Set continuous sill members and flashing in full sealant bed as specified in Section 079200 "Joint Sealants" to produce weathertight installation.

D. Install components plumb and true in alignment with established lines and grades.

E. Install glazing as specified in Section 088000 "Glazing."

F. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points.
   1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
   2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.

3.3 ERECTION TOLERANCES

A. Erection Tolerances: Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:
   1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
   2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
   3. Alignment:
      a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
      b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
      c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
   4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Field Quality-Control Testing: Perform the following test on mockup and representative areas of aluminum-framed entrances and storefronts.
1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
   a. Perform tests on 100 percent of punched openings, prior to 10, 35, and 70 percent completion and after 100 percent of installations are complete.

C. Aluminum-framed entrances and storefronts will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.5 CLEANING

A. Clean exposed frame surfaces promptly after installation, using cleaning methods recommended by frame manufacturer and according to AAMA 609 & 610.

B. Touch up marred frame surfaces so touchup is not visible from a distance of 48 inches. Remove and replace frames with damaged finish that cannot be satisfactorily repaired.

END OF SECTION
SECTION 084216 - INTERIOR ALUMINUM STOREFRONT FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes interior aluminum storefront frames for wood doors and glazing installed in gypsum board partitions.

B. Related Requirements:
   1. Section 081416 "Flush Wood Doors" for wood doors installed in interior aluminum frames.
   2. Section 088000 "Glazing" for glass installed in interior aluminum frames.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, fire-resistance rating, and finishes.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Include the following:
   1. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   2. Locations of reinforcements and preparations for hardware.
   3. Details of each different wall-opening condition.
   4. Details of anchorages, joints, field splices, and connections.
   5. Details of accessories.
   6. Details of moldings, removable stops, and glazing.
   7. Details of conduits and preparations for power, signal, and control systems.

D. Samples for Verification: For interior aluminum frames, prepared on Samples; 12 inches long.

E. Schedule: For interior aluminum frames. Use same designations indicated on Drawings. Coordinate with door hardware schedule and glazing.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For interior aluminum frames to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Provide the following upon request:
1. **Product Test Reports:** Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of interior aluminum frame.

   B. **Mockups:** Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
      1. Build mockup of typical interior wall area as shown on Drawings.
      2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

   **1.6 DELIVERY, STORAGE, AND HANDLING**

      A. Deliver interior aluminum frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic. Store interior aluminum frames under cover at Project site.

   **1.7 WARRANTY**

      A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
      1. Failures include, but are not limited to, the following:
         a. Structural failures including, but not limited to, excessive deflection.
         b. Deterioration of metals, and other materials beyond normal weathering.
         c. Failure of operating components.
      2. Warranty Period: Five years from date of Substantial Completion.

      B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
      1. Deterioration includes, but is not limited to, the following:
         a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
         b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
         c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
      2. Warranty Period: 10 years from date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

   A. **Basis-of-Design Product:** Subject to compliance with requirements, provide TriFab 450 aluminum frames as manufactured by Kawneer North America; an Alcoa company, or comparable product by one of the following:
      1. EFCO Corporation.
      2. Oldcastle BuildingEnvelope.

   B. **Source Limitations:** Obtain all components of aluminum-framed storefront system, including framing and accessories, from single manufacturer.
2.2 COMPONENTS

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
   1. Construction: Non-thermally broken; 2 inch by 4 inch framing member.
   2. Glazing System: Retained mechanically with gaskets on four sides.
   5. Fabrication Method: Field-fabricated stick system.

B. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

D. Materials:
   1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
      a. Sheet and Plate: ASTM B 209.
      b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
      c. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
      d. Structural Profiles: ASTM B 308/B 308M.

E. Door Frames: Extruded aluminum to match adjacent frames, reinforced for hinges, strikes, and closers.

F. Glazing Frames: Extruded aluminum, for glazing thickness indicated.

G. Ceiling Tracks: Extruded aluminum.

H. Trim: Extruded aluminum, not less than 0.062 inch thick, with glazing stops and door stops without exposed fasteners.
   1. Trim Style: Square.

2.3 DOOR HARDWARE

A. Door Hardware: Hardware not specified in this Section is specified in Section 087100 "Door Hardware."

B. General: Provide door hardware and door hardware sets indicated in door and frame schedule for each entrance door to comply with requirements in this Section.
   1. Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and named manufacturers' products or products equivalent in function and comparable in quality to named products.
   2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
   3. Opening-Force Requirements:
      a. Egress Doors: Not more than 15 lbf to release the latch and not more than 30 lbf to set the door in motion and not more than 15 lbf to open the door to its minimum required width.
b. Accessible Interior Doors: Not more than 5 lbf to fully open door.

C. Cylinders: As specified in Section 087100 "Door Hardware."

D. Keying: Master key system. Permanently inscribe each key with a visual key control number and include notation "DO NOT DUPLICATE".

2.4 ACCESSORIES

A. Fasteners and Accessories: Manufacturer’s standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
   1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
   2. Reinforce members as required to receive fastener threads.

B. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch (25.4 mm) that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

C. Door Silencers: Manufacturer’s standard continuous mohair, wool pile, or vinyl seals.

D. Glazing Gaskets: Manufacturer’s standard extruded or molded plastic, to accommodate glazing thickness indicated.

2.5 FABRICATION

A. Provide concealed corner reinforcements and alignment clips for accurately fitted hairline joints at butted or mitered connections.

B. Factory prepare interior aluminum frames to receive templated mortised hardware; include cutouts, reinforcements, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in Section 087100 "Door Hardware." Fabricate frames for glazing with removable stops to allow glazing replacement without dismantling frame.
   1. Locate removable stops on the inside of spaces accessed by keyed doors.

C. Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.

D. Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.

E. Fabricate components to allow secure installation without exposed fasteners.

2.6 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM’s "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 ALUMINUM FINISHES

A. Finish after fabrication.

B. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine walls, floors, and ceilings, with Installer present, for conditions affecting performance of the Work.

B. Verify that wall thickness does not exceed standard tolerances allowed by throat size indicated.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install interior aluminum frames plumb, rigid, properly aligned, and securely fastened in place; comply with manufacturer's written instructions.

B. Set frames accurately in position and plumbed, aligned, and securely anchored to substrates.

C. Install frame components in the longest possible lengths; components up to 72 inches long must be one piece.

1. Fasten to suspended ceiling grid on maximum 48-inch centers, using sheet metal screws or other fasteners approved by frame manufacturer. Provide above-ceiling knee bracing to structure above at 48-inches on center staggered each direction

2. Use concealed installation clips to produce tightly fitted and aligned splices and connections.

3. Secure clips to extruded main-frame components and not to snap-in or trim members.

4. Do not leave screws or other fasteners exposed to view when installation is complete.

D. Install glazing as specified in Section 088000 "Glazing."

E. Doors: Install wood doors according to Section 081416 "Flush Wood Doors" to produce smooth operation and tight fit at contact points.

F. Field-Installed Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
3.3 ERECTION TOLERANCES

A. Erection Tolerances: Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:
   1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
   2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
   3. Alignment:
      a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
      b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
      c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
   4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.4 CLEANING

A. Clean exposed frame surfaces promptly after installation, using cleaning methods recommended by frame manufacturer and according to AAMA 609 & 610.

B. Touch up marred frame surfaces so touchup is not visible from a distance of 48 inches. Remove and replace frames with damaged finish that cannot be satisfactorily repaired.

END OF SECTION
SECTION 084229.23 - SLIDING AUTOMATIC ENTRANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes exterior, sliding, power-operated automatic entrances.

1.3 DEFINITIONS

A. AAADM: American Association of Automatic Door Manufacturers.

B. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.

D. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.

E. For automatic door terminology, refer to BHMA A156.10 for definitions of terms.

1.4 COORDINATION

A. Coordinate sizes and locations of recesses in concrete floors for recessed sliding tracks that control automatic entrances. Concrete, reinforcement, and formwork requirements are specified elsewhere.

B. Templates: Distribute for doors, frames, and other work specified to be factory prepared for installing automatic entrances.

C. Coordinate hardware with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish. Coordinate hardware for automatic entrances with hardware required for rest of Project.

D. Electrical System Roughing-in: Coordinate layout and installation of automatic entrances with connections to power supplies and access-control system.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
1.6 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 013300 "Submittal Procedures."

B. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic entrances.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

C. Shop Drawings: For automatic entrances.
   1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
   2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include diagrams for power, signal, and control wiring.
   4. Indicate locations of activation and safety devices.
   5. Include hardware schedule and indicate hardware types, functions, quantities, and locations.

D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For automatic entrances, safety devices, and control systems to include in operation and maintenance manuals.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative, with certificate issued by AAADM, who is trained for installation and maintenance of units required for this Project.
   1. Maintenance Proximity: Not more than two hours normal travel time from Installer's place of business to Project site.

B. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Product Certificates: For each type of automatic entrance. Include emergency-exit features of automatic entrances serving as a required means of egress.
   3. Product Test Reports: For each type of automatic entrance, for tests performed by a qualified testing agency.
   4. Field quality-control reports.

1.9 COORDINATION

A. Templates: Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing automatic entrances to comply with indicated requirements.
B. Electrical System Roughing-in: Coordinate layout and installation of automatic entrance door assemblies with connections to power supplies, and remote monitoring systems, and security access control system. See Division 28 Section "Electronic Safety and Security" for systems not provided under this section.

C. System Integration: Integrate sliding automatic entrances with other systems as required for a complete working installation.
   1. Provide electrical interface control capability for activation of sliding automatic entrances by exterior secure access system.
   2. Provide electrical interface to allow automatic entrance controls, mode of operation, to be changed by remote access system.
   3. Provide electrical interface to allow for remote monitoring of automatic entrance door panel status.
   4. Provide, supplemental relays, required to control mode of operation.
   5. See Division 28 Section Access Control for systems not provided under this section.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of automatic entrances that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including, but not limited to, excessive deflection.
      b. Faulty operation of operators, controls, and hardware.
      c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
   2. Warranty Period: Two years from date of Substantial Completion.

B. Special Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail in materials or workmanship within specified warranty period.
   1. Deterioration includes, but is not limited to, the following:
      a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
      b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
      c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
   2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 AUTOMATIC ENTRANCE ASSEMBLIES

A. Source Limitations: Obtain automatic entrance door assemblies through one source from a single manufacturer.

B. Certifications: Automatic sliding door systems shall be certified by the manufacturer to meet performance design criteria in accordance with the following standards:
   1. ANSI/BHMA A156.10.
   3. UL 325 listed.
   4. IBC 2012
   5. BOCA
6. CSFM, Listed.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Power-Operated Door Standard: BHMA A156.10.

E. Emergency-Exit Door Requirements: Comply with requirements of authorities having jurisdiction for automatic entrances serving as a required means of egress.

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Automatic entrances shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
   1. Wind and Seismic Loads: As indicated on Drawings.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
   1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

C. Operating Temperature Range: Automatic entrances shall operate within minus 20 to plus 122 deg F.

D. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 1.25 cfm/sq. ft. of fixed entrance-system area when tested according to ASTM E 283 at a minimum static-air-pressure difference of 6.24 lbf/sq. ft.

E. Opening Force:
   1. Power-Operated Doors: Not more than 50 lbf required to manually set door in motion if power fails, and not more than 15 lbf required to open door to minimum required width.
   2. Breakaway Device for Power-Operated Doors: Not more than 50 lbf required for a breakaway door or panel to open.

F. Entrapment-Prevention Force:
   1. Power-Operated Sliding Doors: Not more than 30 lbf required to prevent stopped door from closing.

2.3 SLIDING AUTOMATIC ENTRANCES

A. General: Provide manufacturer’s standard automatic entrances including doors, sidelites, framing, headers, carrier assemblies, roller tracks, door operators, controls, and accessories required for a complete installation.

B. Biparting- Sliding Automatic Entrance:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Dura-Glide 2000 Series as manufactured by Stanley Access Technologies, or comparable product by one of the following:
      a. Besam Entrance Solutions; ASSA ABLOY.
      b. DORMA Automatics; Division of DORMA Group North America.
c. Tormax Technologies, Inc.

2. Configuration: Biparting-sliding doors with two sliding leaves sidelites on each side.
   a. Traffic Pattern: Two way.
   b. Emergency Breakaway Capability: Sliding leaves only.
   c. Mounting: Between jambs.

4. Features:
   a. Adjustable opening and closing speeds.
   b. Adjustable open check and close check speeds.
   c. Adjustable hold-open time between 0 and 30 seconds.
   d. Obstruction recycle.
   e. On/Off switch to control electric power to operator.
   f. Energy conservation switch that reduces door-opening width.
   g. Closed loop speed control with active braking and acceleration.
   h. Adjustable obstruction recycle time delay.
   i. Self-adjusting stop position.
   j. Self-adjusting closing compression force.
   k. Onboard sensor power supply.
   l. Onboard sensor monitoring.
   m. Optional Switch to open/Switch to close operation.
   n. Fire alarm interface, configurable to safely open or close the entrance on signal from fire alarm system.

5. Sliding-Door Carrier Assemblies and Overhead Roller Tracks: Carrier assembly that allows vertical adjustment; consisting of nylon- or delrin-covered, ball-bearing-center steel wheels operating on a continuous roller track, or ball-bearing-center steel wheels operating on a nylon- or delrin-covered, continuous roller track. Support doors from carrier assembly by cantilever and pivot assembly.
   a. Rollers: Minimum of two ball-bearing roller wheels and two antirise rollers for each active leaf.

   a. Configuration: No threshold across door opening and recessed guide-track system at sidelites.

7. Controls: Activation and safety devices according to BHMA standards.
   a. Activation Device: Motion sensor mounted on each side of door header to detect pedestrians in activating zone and to open door.
   b. Safety Device: Two photoelectric beams mounted in sidelite jambs on each side of door to detect pedestrians in presence zone and to prevent door from closing.

C. Framing Members: Extruded aluminum, minimum 0.125 inch thick and reinforced as required to support imposed loads.
   1. Nominal Size: 1-3/4 by 4-1/2 inches.
   2. Extruded Glazing Stops and Applied Trim: Minimum 0.062-inch wall thickness.

D. Stile and Rail Doors: 1-3/4-inch thick, glazed doors with minimum 0.125-inch thick, extruded-aluminum tubular stile and rail members. Mechanically fasten corners with reinforcing brackets that are welded, or incorporate concealed tie-rods that span full length of top and bottom rails.
2. Stile Design: As indicated on Drawings.
3. Rail Design: As indicated on Drawings.
4. Midrail shall have integrated flush emergency panic device.

E. Sidelite(s): 1-3/4-inch deep with minimum 0.125-inch thick, extruded-aluminum tubular stile and rail members matching door design.
   1. Glazing Stops and Gaskets: Same materials and design as for stile and rail door.

F. Headers: Fabricated from minimum 0.125-inch thick extruded aluminum and extending full width of automatic entrance units to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.
   1. Mounting: Concealed, with one side of header flush with framing.
   2. Capacity: Capable of supporting doors up to 220 lb per leaf over spans up to 14 feet without intermediate supports.
      a. Provide sag rods for spans exceeding 14 feet.

G. Brackets and Reinforcements: High-strength aluminum with nonstaining, nonferrous shims for aligning system components.

H. Signage: As required by cited BHMA standard.
   2. Provide sign materials with instructions for field application after glazing is installed.

2.4 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
   1. Extrusions: ASTM B 221.

B. Glazing: As specified in Section 088000 "Glazing."

C. Sealants and Joint Fillers: As specified in Section 079200 "Joint Sealants."

D. Nonmetallic, Shrinkage-Resistant Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout; complying with ASTM C 1107/C 1107M; of consistency suitable for application.

E. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

F. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.5 DOOR OPERATORS AND CONTROLS

A. General: Provide operators and controls, which include activation and safety devices, according to BHMA standards, for condition of exposure, and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated.

B. Door Operators: Provide door operators of size recommended by manufacturer for door size, weight, and movement.
1. Door Operator Performance: Door operators shall open and close doors and maintain them in fully closed position when subjected to Project's design wind loads.

2. Electromechanical Operators: Concealed, self-contained, overhead unit powered by fractional-horsepower, permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor; with solid-state microprocessor controller; UL 325; and with manual operation with power off.

C. Motion Sensors: Self-contained, K-band-frequency, microwave-scanner units; fully enclosed by its plastic housing; adjustable to provide detection-field sizes and functions required by BHMA A156.10.
   1. Provide capability for switching between bidirectional and unidirectional detection.

D. Photoelectric Beams: Pulsed infrared, sender-receiver assembly for recessed mounting. Beams shall not be active when doors are fully closed.

E. Access Control Locking System: Provide access control locking hardware on sliding automatic entrances as follows:
   1. System shall include:
      a. A fail-secure electric solenoid locking device with a self-contained solid-state electronic control factory mounted inside the header.
      b. Vertical rod exit devices incorporated into the sliding door panels that prevent breakout until rod is released.
   2. When set for secure operation, the automatic sliding entrance(s) shall electrically latch in the closed position preventing door panels from sliding manually, returning the system to its locked status.
   3. During a power interruption:
      a. The solenoid lock shall be engaged, preventing the doors from sliding manually.
      b. Means of egress shall be accomplished by exit device. Exit device shall be concealed vertical rod tamper proof exit device with recessed flush mounted interior release hardware that shall prohibit manual breakout of door(s) from exterior. Flush mounted release hardware shall be concealed within the horizontal muntin bar.
   4. Key Switch: Provide exterior jamb-mounted key switch with momentary action switch.

F. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

2.6 HARDWARE

A. General: Provide units in sizes and types recommended by automatic entrance and hardware manufacturers for entrances and uses indicated. Finish exposed parts to match door finish unless otherwise indicated.

B. Breakaway Device for Power-Operated Doors: Device that allows door to swing out in direction of egress to full 90 degrees from any operating position. Maximum force to open door shall be as stipulated in "Performance Requirements" Article. Interrupt powered operation of door operator while in breakaway mode.

   1. Limit Arms: Limit arms shall be provided to control swing of sliding panels on break-out; swing shall not exceed 90 degrees. Limit arms shall be spring loaded to prevent shock, and include adjustable friction damping.

C. Deadlocks: Deadbolt operated by exterior cylinder and interior thumb turn, with minimum 1-inch-long throw bolt; BHMA A156.5, Grade 1.
1. Cylinders: As specified in Section 087100 "Door Hardware."
   a. Keying: Integrate into building master key system.

D. Control Switch: Provide manufacturer's standard keyed rotary switch mounted on the interior jamb and door position switch to allow for full control of the automatic entrance door. Controls to include, but are not limited to:
   1. One-way traffic; secure.
   2. Reduced Opening
   3. Open/Closed/Automatic

E. Power Switch: Sliding automatic entrances shall be equipped with a two position "On/Off" illuminated rocker switch to control power to the door.

F. Weather Stripping: Replaceable components.
   1. Sliding Type: AAMA 701, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing; mortise into door, at perimeter of doors and breakaway sidelites.

2.7 FABRICATION

A. General: Factory fabricate automatic entrance components to designs, sizes, and thicknesses indicated and to comply with indicated standards.
   1. Form aluminum shapes before finishing.
   2. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
   3. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match framing.
      a. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
      b. Reinforce members as required to receive fastener threads.
   4. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.

B. Framing: Provide automatic entrances as prefabricated assemblies. Complete fabrication, assembly, finishing, hardware application, and other work before shipment to Project site.
   1. Fabricate tubular and channel frame assemblies with welded or mechanical joints. Provide subframes and reinforcement as required for a complete system to support required loads.
   2. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
   3. Form profiles that are sharp, straight, and free of defects or deformations.
   4. Provide components with concealed fasteners and anchor and connection devices.
   5. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
   6. Fabricate exterior components to drain condensation and water passing joints within system to the exterior.
   7. Provide anchorage and alignment brackets for concealed support of assembly from building structure.
   8. Allow for thermal expansion of exterior units.
C. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.

D. Door Operators: Factory fabricated and installed in headers, including adjusting and testing.

E. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated, according to GANA's "Glazing Manual."

F. Hardware: Factory install hardware to greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site. Cut, drill, and tap for factory-installed hardware before applying finishes.

G. Controls: Factory install activation and safety devices in doors and headers as required by BHMA A156.10 for type of door and direction of travel.

2.8 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.9 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   1. Minimum dry film thickness of each coat shall be 1.2 mils.
   2. Colors: Allow for two custom colors.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of automatic entrances.

B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic entrance installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 INSTALLATION

A. General: Install automatic entrances according to manufacturer's written instructions and cited BHMA standard for direction of pedestrian travel, including signage, controls, wiring, and connection to the building's power supply.

1. Do not install damaged components. Fit frame joints to produce hairline joints free of burrs and distortion. Rigidly secure nonmovement joints. Seal joints watertight.
2. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.
3. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous coating.

B. Entrances: Install automatic entrances plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place.

1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
2. Set headers, carrier assemblies, tracks, operating brackets, and guides level and true to location with anchorage for permanent support.
3. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within system to exterior.
4. Level recesses for recessed thresholds using nonshrink grout.

C. Door Operators: Connect door operators to electrical power distribution system.

D. Access-Control Devices: Connect access-control devices to access-control system as specified in SDivision 28 "Access Control."

E. Controls: Install and adjust activation and safety devices according to manufacturer's written instructions and cited BHMA standard for direction of pedestrian travel. Connect control wiring according to Division 26 "Low-Voltage Electrical Power Conductors and Cables."

F. Glazing: Install glazing as specified in Section 088000 "Glazing."

G. Sealants: Comply with requirements specified in Section 079200 "Joint Sealants" to provide weathertight installation.

1. Set bottom-guide-track system, framing members and flashings in full sealant bed.
2. Seal perimeter of framing members with sealant.

H. Signage: Apply signage on both sides of each door and breakaway sidelite as required by cited BHMA standard for direction of pedestrian travel.

I. Wiring within Automatic Entrance Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's written limitations on bending radii. Provide and use lacing bars and distribution spools.

3.3 FIELD QUALITY CONTROL

A. Certified Inspector: Owner will engage a Certified Inspector to test and inspect components, assemblies, and installations, including connections.

B. Automatic entrances will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.
3.4 ADJUSTING

A. Adjust hardware, moving parts, door operators, and controls to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.
   1. Adjust exterior doors for weathertight closure.

B. Readjust door operators and controls after repeated operation of completed installation equivalent to three days’ use by normal traffic (100 to 300 cycles).

C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.5 CLEANING

A. Clean glass and metal surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Repair damaged finish to match original finish.
   1. Comply with requirements in Section 088000 "Glazing" for cleaning and maintaining glass.

3.6 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months’ full maintenance by skilled employees of automatic entrance Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper automatic entrance operation. Parts and supplies shall be manufacturer’s authorized replacement parts and supplies.
   1. Engage a Certified Inspector to perform safety inspection after each adjustment or repair and at end of maintenance period. Furnish completed inspection reports to Owner.
   2. Perform maintenance, including emergency callback service, during normal working hours.
   3. Include 24-hour-per-day, 7-day-per-week, emergency callback service.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner’s maintenance personnel to adjust, operate, and maintain automatic entrances.

END OF SECTION
SECTION 084413 - GLAZED ALUMINUM CURTAIN WALLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes conventionally glazed aluminum curtain walls.

B. Related Requirements:
   1. Section 079200 "Joint Sealants" for installation of joint sealants installed with glazed aluminum curtain walls and for sealants to the extent not specified in this Section.
   2. Section 084423 "Structural-Sealant-Glazed Curtain Walls" for structural-sealant-glazed curtain walls.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Conference shall be held at least two weeks prior to fabrication and/or installation of curtain wall system. Arrange meeting at Project site with the glazier, sealant, and gasket manufacturers' technical representatives and any others necessary to review procedures, products to be used, and schedule for the Work. Give at least two weeks notice to Architect and other concerned parties.

1.4 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 080413.

B. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Shop Drawings: For glazed aluminum curtain walls. Include plans, elevations, sections, full-size details, and attachments to other work.
   1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
   2. Include full-size isometric details of each vertical-to-horizontal intersection of glazed aluminum curtain walls, showing the following:
      a. Joinery, including concealed welds.
      b. Anchorage.
      c. Expansion provisions.
d. Glazing.
e. Flashing and drainage.

3. Include laboratory mockup Shop Drawings, prepared by a qualified preconstruction testing agency, showing details of laboratory mockup.
   a. Submit mockup system Shop Drawings only after approval of wall system Shop Drawings.
   b. Resubmit Shop Drawings with changes made to glazed aluminum curtain walls to successfully complete preconstruction testing.

E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes. Include 2 or more samples in each set, indicating limits of variation.

F. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:
   1. Joinery, including concealed welds.
   2. Expansion provisions.
   4. Flashing and drainage.
   5. Cross-sectional sample of curtain wall showing thermal break construction.

G. Delegated-Design Submittal: For glazed aluminum curtain walls indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For glazed aluminum curtain walls to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

B. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
   1. Do not revise intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If revisions are proposed, submit comprehensive explanatory data to Architect for review.

C. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."

D. Energy Performance Standards: Comply with NFRC for minimum standards of energy performance, materials, components, accessories, and fabrication. Comply with more stringent requirements if indicated.
   1. Provide NFRC-certified glazed aluminum curtain walls with an attached label.
E. Provide the following upon request:

1. Qualification Data: For qualified Installer.
2. Seismic Qualification Certificates: For glazed aluminum curtain walls, accessories, and components, from manufacturer.
   a. Basis for Certification: Indicate whether certification is based on actual test of assembled components or on calculation.
3. Welding certificates.
   a. Basis for Certification: NFRC-certified energy performance values for each glazed aluminum curtain wall.
5. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified preconstruction testing agency, for glazed aluminum curtain walls, indicating compliance with performance requirements.
6. Field quality-control reports.

F. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Furnish all labor and materials to completely erect mockup units of sufficient size and configuration to demonstrate the performance capabilities of the vertical wall system. Schedule mockup erection and testing sufficiently in advance of wall system fabrication to cause no delay. Do not install mockup materials as part of the wall system.
2. After completion of mockup construction and prior to start of testing sequence, two vision glass lite and one spandrel panels are to be removed and replaced to successfully demonstrate project reglazing procedures.
3. Exact configuration will be determined during wall system shop drawing review. For purposes of bidding, include costs for a vertical mockup one bay high by two bays wide with an outside corner.
4. Mockup shall have all details complete and identical to those approved on the wall system shop drawings. Mockup shall demonstrate quality of materials, finish, and workmanship, as well as compliance with performance requirements.
5. Provide schedule for mockup fabrication, erection, glazing, sealing and testing a minimum of 30 days in advance of fabrication to permit District and Architect to coordinate monitoring and observation.
6. Field testing shall be performed on mockups according to requirements in "Field Quality Control" Article.
7. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
8. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of structural supports for glazed aluminum curtain walls by field measurements before fabrication and indicate measurements on Shop Drawings.
1.8 WARRANTY

A. Special Assembly Warranty: Standard form in which manufacturer agrees to repair or replace components of glazed aluminum curtain walls that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Structural failures including, but not limited to, excessive deflection.
   b. Noise or vibration created by wind and thermal and structural movements.
   c. Deterioration of metals and other materials beyond normal weathering.
   d. Water penetration through fixed glazing and framing areas.

2. Warranty Period: Five years from date of Substantial Completion.

B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
   a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
   b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
   c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Comply with performance requirements specified, as determined by testing of manufacturer’s standard glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. Glazed aluminum curtain walls shall withstand movements of supporting structure indicated on Drawings including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.

2. Failure also includes the following:
   a. Thermal stresses transferring to building structure.
   b. Glass breakage.
   c. Noise or vibration created by wind and thermal and structural movements.
   d. Loosening or weakening of fasteners, attachments, and other components.
   e. Failure of operating units.

B. Delegated Design: Design glazed aluminum curtain walls, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

C. Structural Loads:

1. Wind and Seismic Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.
D. Structural-Test Performance: Test according to ASTM E 330 as follows:
   1. When tested at positive and negative wind-load design pressures, assemblies do not
evidence deflection exceeding specified limits.
   2. When tested at 150 percent of positive and negative wind-load design pressures,
assemblies, including anchorage, do not evidence material failures, structural distress,
and permanent deformation of main framing members exceeding 0.2 percent of span.
   3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

E. Deflection of Framing Members: At design wind pressure, as follows:
   1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans up to 13 feet 6
   inches and to 1/240 of clear span for spans greater than 13 feet 6 inches or an amount
   that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
   2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which
   reduces glazing bite to less than 75 percent of design dimension and that which reduces
   edge clearance between framing members and glazing or other fixed components to less
   than 1/8 inch.
   3. Cantilever Deflection: Where framing members overhang an anchor point, limit
deflection to two times the length of cantilevered member, divided by 175.

F. Seismic Performance: Glazed aluminum curtain walls shall withstand the effects of earthquake
motions determined according to SEI/ASCE 7.
   1. Component Importance Factor is 1.0.

G. Water Penetration under Static Pressure: No evidence of water penetration through fixed
      glazing and framing areas when tested according to ASTM E 331 at a minimum
      static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less
      than 10 lbf/sq. ft.

H. Water Penetration under Dynamic Pressure: No evidence of water penetration through fixed
      glazing and framing areas when tested according to AAMA 501.1 at dynamic pressure equal to
      20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft.
      1. Controlled Water Leakage: No uncontrolled water penetrating assemblies or water
         appearing on assemblies' normally exposed interior surfaces from sources other than
         condensation. Water leakage does not include water controlled by flashing and gutters
         that does not wet insulation within the wall system and that is drained to exterior.

I. Thermal Movements: Allow for thermal movements resulting from the following maximum
change (range) in ambient and surface temperatures:
   1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
   2. Test Interior Ambient-Air Temperature: 65 deg F.
   3. Test Performance: No buckling; stress on glass; sealant failure; excess stress on
      framing, anchors, and fasteners; or reduction of performance when tested according to
      AAMA 501.5.

J. Energy Performance: Glazed aluminum curtain walls shall have certified and labeled energy
      performance ratings in accordance with NFRC.
   1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor
      of not more than 0.45 Btu/sq. ft. x h x deg F as determined according to NFRC 100.
   2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain
      coefficient of no greater than 0.35 as determined according to NFRC 200.
3. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 0.30 cfm/sq. ft. of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft.

4. Condensation Resistance: Design the wall and its components to not develop any visible interior condensation on framing members or glazing when the exterior air dry bulb temperature is 35 deg F > deg C) and the interior air dry bulb temperature is 65 deg F. Insert number and with a 35 percent relative humidity.
   a. Provide independent laboratory test reports based on AAMA 1503.1, confirming wall system performance to at least the above criteria.
   b. If independent laboratory test reports are unavailable to verify thermal performance, provide computer analysis using THERM 5 and Windows 5 software as developed by Lawrence Berkeley National Laboratory. Include in the analysis at least all principle Mullions for sill, jamb, and head conditions for vision lights and spandrel areas.

2.2 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide listed products as manufactured by Kawneer North America; an Alcoa company, or comparable product by one of the following:
   1. EFCO Corporation.
   2. Vistawall Architectural Products; Oldcastle Building Envelope.

2.3 BASIS-OF-DESIGN PRODUCTS

A. Curtain Wall Type A: Refer to Section 084423 “Structurally-Sealant-Glazed Curtain Walls.”

B. Curtain Wall Type B: Refer to Section 084423 “Structurally-Sealant-Glazed Curtain Walls.”

C. Curtain Wall Type C: Kawneer 1600 UT, System1, 4-sided captured, thermally broken.
   1. Size: 2.5-inches by 7.5-inches.

D. Curtain Wall Type D: Kawneer 1600 UT, System1, 4-sided captured, thermally broken, internal steel reinforcement.
   1. Size: 2.5-inches by 7.5-inches.

E. Source Limitations: Obtain all curtain wall systems for the Project, including framing and accessories, from single manufacturer.

2.4 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
   2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
   4. Structural Profiles: ASTM B 308/B 308M.
   5. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.
B. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
   1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
   2. Cold-Rolled Sheet and Strip: ASTM A 1008/A 1008M.
   3. Hot-Rolled Sheet and Strip: ASTM A 1011/A 1011M.

C. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

D. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

E. Regional Materials: Products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

2.5 FRAMING

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
   2. Glazing System: Retained mechanically with gaskets on four sides.

B. Thermally Broken Construction:
   1. Provide one of the following types of thermal break construction:
      b. Struct-Link or similar construction as approved: A poured and interrupted debrided polyurethane construction that periodically leaves a measured length of aluminum web to provide structural integrity, with the debrided sections continuously sealed using an elastomeric sealant.
      c. Azon or similar construction as approved: A poured and debrided polyurethane construction with mechanically abraded surfaces that lock in the polyurethane minimizing dry shrinkage and fracturing of the polyurethane.
      d. Pressure Bar: A continuous extruded aluminum member anchored to the window framing system with mechanical fasteners and separated from the framing by an insulating non-metallic spacer.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

D. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
   1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
   2. Reinforce members as required to receive fastener threads.
E. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

F. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials or Dead-soft, 0.018-inch-thick stainless steel, ASTM A 240/A 240M of type recommended by manufacturer.

G. Framing Sealants: Manufacturer's standard sealants [with VOC content of 250g/L or less when calculated according to 40 CFR 59, Subpart D (EPA method 24)].

2.6 GLAZING

A. Glazing: Comply with Section 088000 "Glazing."

B. Glazing Gaskets: Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.
   1. Provide gaskets that are compatible with glazing sealants and will provide for silicone adhesion.

C. Glazing Sealants: As recommended by manufacturer.
   1. Sealants used inside the weatherproofing system shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.7 INSULATED METAL PANELS

A. Insulated Metal Panels: Laminated, metal-faced flat panels with no deviations in plane exceeding 0.8 percent of panel dimension in width or length.
   1. Overall Panel Thickness: Not less than 1 inch.
   2. Exterior Skin: Aluminum.
      a. Thickness: Manufacturer's standard for finish and texture indicated.
      b. Finish: Matching framing system.
      c. Texture: Smooth.
      d. Backing Sheet: 0.157-inch-thick, cement board.
   3. Interior Skin: Manufacturer's standard galvanized-steel sheet.
      a. Thickness: Manufacturer's standard for finish and texture indicated.
      b. Finish: Low-gloss, white baked enamel.
      c. Texture: Smooth.
      d. Backing Sheet: 1/2-inch-thick, gypsum board with proprietary fire-resistance-rated core.
   4. Thermal Insulation Core: Manufacturer's standard rigid, closed-cell, polyisocyanurate board.
   5. Surface-Burning Characteristics: For exposed interior surfaces of panels, when tested according to ASTM E 84 as follows:
      a. Flame-Spread Index: 25 or less.
      b. Smoke-Developed Index: 450 or less.
2.8 ACCESSORY MATERIALS

A. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.9 FABRICATION

A. Form aluminum shapes before finishing.

B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

C. Fabricate components that, when assembled, have the following characteristics:
   1. Profiles that are sharp, straight, and free of defects or deformations.
   2. Accurately fitted joints with ends cope or mitered.
   3. Physical and thermal isolation of glazing from framing members.
   4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
   5. Provisions for field replacement of glazing from exterior.
   6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
   7. Components curved to indicated radii.

D. Fabricate components that, when assembled, have the following characteristics:
   1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.

E. Curtain-Wall Framing: Fabricate components for assembly using shear-block system.

F. Factory-Assembled Frame Units:
   1. Rigidly secure nonmovement joints.
   2. Seal joints watertight unless otherwise indicated.
   3. Install glazing to comply with requirements in Section 088000 "Glazing."

G. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.10 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   1. Color and Gloss: As selected by Architect from manufacturer's full range.
PART 3 - EXECUTION

3.1 MOCKUP APPROVAL

A. Do not proceed with erection of curtain wall work before completion and approval of mockups.

3.2 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. General:
   1. Comply with manufacturer's written instructions.
   2. Do not install damaged components.
   3. Fit joints to produce hairline joints free of burrs and distortion.
   4. Rigidly secure nonmovement joints.
   5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
   6. Weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
   7. Seal joints watertight unless otherwise indicated.

B. Approved mockups establish acceptable workmanship and quality standards of the Project.

C. Metal Protection:
   1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.
   2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

D. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.

E. Install components plumb and true in alignment with established lines and grades.

F. Install field-glazed units according to Section 088000 "Glazing."

3.4 ERECTION TOLERANCES

A. Erection Tolerances: Install glazed aluminum curtain walls to comply with the following maximum tolerances:
   1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
   2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
   3. Alignment:
a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.

b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.

c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.

4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Testing Services: Testing and inspecting of representative areas of glazed aluminum curtain walls shall take place as installation proceeds to determine compliance of installed assemblies with specified requirements.

1. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article, but not more than 0.09 cfm/sq. ft., of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft..

a. Test Area: Two bays wide, but not less than 12 feet, by one story high of glazed aluminum curtain wall on mockup and in three separate locations on building facade as directed by Architect.

b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.

2. Water Penetration: Areas shall be tested according to ASTM E 1105 at a minimum uniform and cyclic static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft., and shall not evidence water penetration.

a. Test Area: Two bays wide, but not less than 12 feet, by one story high of glazed aluminum curtain wall on mockup and in three separate locations on building facade as directed by Architect.

b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.

C. Glazed aluminum curtain walls will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

END OF SECTION
SECTION 084423 - STRUCTURAL-SEALANT-GLAZED CURTAIN WALLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Factory or Field-glazed, two-sided structural-sealant-glazed curtain-wall assemblies.

B. Related Requirements:
   1. Section 079200 "Joint Sealants" for installation of joint sealants installed with glazed aluminum curtain walls and for sealants and sealant testing to the extent not specified in this Section.
   2. Section 084413 "Glazed Aluminum Curtain Walls" for conventionally glazed curtain walls.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Conference shall be held at least two weeks prior to fabrication and/or installation of curtain wall system. Arrange meeting at Project site with the glazier, sealant, and gasket manufacturers’ technical representatives and any others necessary to review procedures, products to be used, and schedule for the Work. Give at least two weeks notice to Architect and other concerned parties.

1.4 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 080413.

B. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Shop Drawings: For structural-sealant-glazed curtain walls. Include plans, elevations, sections, full-size details, and attachments to other work.
   1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
   2. Include full-size isometric details of each vertical-to-horizontal intersection of structural-sealant-glazed curtain walls, showing the following:
a. Joinery, including concealed welds.
b. Anchorage.
c. Expansion provisions.
d. Glazing.
e. Flashing and drainage.

3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.

E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

F. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:
   1. Joinery, including concealed welds.
   2. Expansion provisions.
   4. Flashing and drainage.

G. Delegated-Design Submittal: For structural-sealant-glazed curtain walls indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For structural-sealant-glazed curtain walls to include in maintenance manuals.

B. Maintenance Data for Structural Sealant: For structural-sealant-glazed curtain walls to include in maintenance manuals. Include ASTM C 1401 recommendations for postinstallation-phase quality-control program.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Preconstruction Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.

C. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
   1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

D. Structural-Sealant Glazing: Comply with ASTM C 1401 for design and installation of curtain-wall assemblies.

E. Provide the following upon request:
1. Qualification Data: For Installer and preconstruction testing agency.
2. Seismic Qualification Certificates: For glazed aluminum curtain walls, accessories, and components, from manufacturer.
   a. Basis for Certification: Indicate whether certification is based on actual test of assembled components or on calculation.
   a. Basis for Certification: NFRC-certified energy performance values for each structural-sealant-glazed curtain wall.
4. Product Test Reports: For structural-sealant-glazed curtain walls, for tests performed by manufacturer and witnessed by a qualified testing agency or independently by a qualified testing agency.
5. Source quality-control reports.
6. Field quality-control reports.

1.7 MOCKUPS

A. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Furnish all labor and materials to completely erect mockup units of sufficient size and configuration to demonstrate the performance capabilities of the vertical wall system. Schedule mockup erection and testing sufficiently in advance of wall system fabrication to cause no delay. Do not install mockup materials as part of the wall system.
2. After completion of mockup construction and prior to start of testing sequence, two vision glass lites and one spandrel panel are to be removed and replaced to successfully demonstrate project reglazing procedures.
3. Build mockup of typical wall area as shown on Drawings.
4. Exact configuration will be determined during wall system shop drawing review. For purposes of bidding, include costs for a vertical mockup one story high by two bays wide with an outside corner.
5. Mockup shall have all details complete and identical to those approved on the wall system shop drawings. Mockup shall demonstrate quality of materials, finish, and workmanship, as well as compliance with performance requirements.
6. Provide schedule for mockup fabrication, erection, glazing, sealing and testing a minimum of 30 days in advance of fabrication to permit ownerDistrict and Architect to coordinate monitoring and observation.
7. Field testing shall be performed on mockups according to requirements in "Field Quality Control" Article.
8. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
9. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 PRECONSTRUCTION LABORATORY TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing.
B. Preconstruction Sealant Testing: Perform sealant manufacturer's standard tests for compatibility and adhesion of each material that will come in contact with sealants for each condition.

1. Test a minimum five production-run samples each of metal, glazing, and other material. Include testing of structural sealant, weatherseal sealants, and glazing sealants.
2. Prepare samples using techniques and primers required for installed assemblies.
3. Perform tests under environmental conditions that duplicate those under which assemblies will be installed.
4. For materials that fail tests, determine corrective measures necessary to prepare each material to ensure compatibility with and adhesion of sealants including, but not limited to, specially formulated primers. After performing these corrective measures on the minimum number of samples required for each material, retest materials.

1.9 FIELD CONDITIONS

A. Verify actual locations of structural supports for structural-sealant-glazed curtain walls by field measurements before fabrication and indicate measurements on Shop Drawings.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of glazed aluminum curtain wall that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Structural failures including, but not limited to, excessive deflection.
   b. Noise or vibration created by wind and thermal and structural movements.
   c. Deterioration of metals and other materials beyond normal weathering.
   d. Water penetration through fixed glazing and framing areas.
2. Warranty Period: 10 years from date of Substantial Completion.

B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
   a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
   b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
   c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design structural-sealant-glazed curtain walls.
B. General Performance: Comply with performance requirements specified, as determined by testing of structural-sealant-glazed curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. Structural-sealant-glazed curtain walls shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
2. Failure also includes the following:
   a. Thermal stresses transferring to building structure.
   b. Glass breakage.
   c. Noise or vibration created by wind and thermal and structural movements.
   d. Loosening or weakening of fasteners, attachments, and other components.
   e. Failure of operating units.

C. Structural Loads:
1. Wind and Seismic Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.

D. Deflection of Framing Members: At design wind pressure, as follows:
1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch.
   a. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.
3. Cantilever Deflection: Where framing members overhang an anchor point, as follows:
   a. Perpendicular to Plane of Wall: No greater than 1/240 of clear span plus 1/4-inch for spans greater than 11 feet 8-1/4 inches or 1/175 times span, for spans less than 11 feet 8-1/4 inches.

E. Structural: Test according to ASTM E 330 as follows:
1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

F. Air Infiltration: Test according to ASTM E 283 for infiltration as follows:
1. Fixed Framing and Glass Area:
   a. Maximum air leakage of 0.06 cfm/sq. ft. at a static-air-pressure differential of 6.24 lbf/sq. ft..

G. Water Penetration under Static Pressure: Test according to ASTM E 331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 15 lbf/sq. ft..

H. Water Penetration under Dynamic Pressure: Test according to AAMA 501.1 as follows:
   1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 15 lbf/sq. ft.
   2. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies’ normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

I. Seismic Performance: Structural-sealant-glazed curtain walls shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.6 at design displacement and 1.5 times the design displacement.
   2. Vertical Interstory Movement: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.7 at design displacement and 1.5 times the design displacement.

J. Energy Performance: Certify and label energy performance according to NFRC as follows:
   1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than 0.45 Btu/sq. ft. x h x deg F (2.55 W/sq. m x K) as determined according to NFRC 100.
   2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.35 as determined according to NFRC 200.
   3. Condensation Resistance: Design the wall and its components to not develop any visible interior condensation on framing members or glazing when the exterior air dry bulb temperature is 35 deg F and the interior air dry bulb temperature is 65 deg F with a 45 percent relative humidity.

K. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
   1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
   2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.
      a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F.
      b. Low Exterior Ambient-Air Temperature: 0 deg F.

L. Structural-Sealant Joints:
   1. Designed to carry gravity loads of glazing.
   2. Designed to produce tensile or shear stress of less than 20 psi.

M. Structural Sealant: Capable of withstanding tensile and shear stresses imposed by structural-sealant-glazed curtain walls without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.
3. Perform preconstruction testing on structural sealants as indicated.

2.2 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide listed products as manufactured by Kawneer North America; an Alcoa company, or comparable product by one of the following:
   1. EFCO Corporation.
   2. Vistawall Architectural Products; Oldcastle Building Envelope.

2.3 BASIS-OF-DESIGN PRODUCTS

A. Curtain Wall Type A: Kawneer 1600 UT, System2, captured vertical, SSG horizontal, internal steel reinforcement, thermally-broken, either factor- or field-fabricated.
   1. Size: 2.5-inches by 10-inches.

B. Curtain Wall Type B: Kawneer 1600 UT, System2, captured vertical with extended beauty cap (12 inches), SSG horizontal, internal steel reinforcement, thermally broken, either factor- or field-fabricated.
   1. Size: 2.5-inches by 7.5-inches.

C. Curtain Wall Type C: Refer to Section 084413 "Glazed Aluminum Curtain Walls."

D. Curtain Wall Type D: Refer to Section 084413 "Glazed Aluminum Curtain Walls."

E. Source Limitations: Obtain all curtain wall systems for the Project, including framing and accessories, from single manufacturer.

2.4 FRAMING

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.

B. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

C. Thermally Broken Construction:
   1. Provide one of the following types of thermal break construction:
b. Struct-Link or similar construction as approved: A poured and interrupted debridged polyurethane construction that periodically leaves a measured length of aluminum web to provide structural integrity, with the debridged sections continuously sealed using an elastomeric sealant.

c. Azon or similar construction as approved: A poured and debridged polyurethane construction with mechanically abraded surfaces that lock in the polyurethane minimizing dry shrinkage and fracturing of the polyurethane.

d. Pressure Bar: A continuous extruded aluminum member anchored to the window framing system with mechanical fasteners and separated from the framing by an insulating non-metallic spacer.

2.5 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
   2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
   3. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
   4. Structural Profiles: ASTM B 308/B 308M.

B. Steel Reinforcement:
   1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
   2. Cold-Rolled Sheet and Strip: ASTM A 1008/A 1008M.
   3. Hot-Rolled Sheet and Strip: ASTM A 1011/A 1011M.

C. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM, and prepare surfaces according to applicable SSPC standard.

D. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

E. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

F. Regional Materials: Products shall be manufactured within 100 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

2.6 INSULATED METAL PANELS

A. Insulated Metal Panels: Laminated, metal-faced flat panels with no deviations in plane exceeding 0.8 percent of panel dimension in width or length.
   1. Overall Panel Thickness: Not less than 1 inch.
   2. Exterior Skin: Aluminum.
      a. Thickness: Manufacturer's standard for finish and texture indicated.
      b. Finish: Matching framing system.
      c. Texture: Smooth.
      d. Backing Sheet: 0.157-inch- thick, cement board.
   3. Interior Skin: Manufacturer's standard galvanized-steel sheet.
2.7 GLAZING

A. Glazing: Comply with Section 088000 "Glazing."

B. Structural Glazing Sealants: ASTM C 1184, chemically curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in curtain-wall assembly indicated.

1. Color: As selected by Architect from manufacturer's full range of colors.

C. Weatherseal Sealants: ASTM C 920 for Type S; Grade NS; Class 25 (minimum); Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed curtain-wall manufacturers for this use.

2. Sealant shall have a VOC content of 250 g/L or less.
3. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.8 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
2. Reinforce members as required to receive fastener threads.
3. No exposed fastenings will be permitted in aluminum work, unless otherwise specified or indicated.
4. In certain locations where it is impossible or highly impractical, or in locations where exposed but hidden from view, consideration will be given to exposed fastenings where such fastenings are Phillips, flat head, or countersunk machine screws, finished to match framing system, fabricated from 300 series stainless steel.

B. Anchors: Three-way adjustable anchors with minimum adjustment of [1 inch] <Insert dimension> that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
C. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials or Dead-soft, 0.018-inch-thick stainless steel, ASTM A 240/A 240M of type recommended by manufacturer.

D. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.9 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

C. Fabricate components that, when assembled, have the following characteristics:
   1. Profiles that are sharp, straight, and free of defects or deformations.
   2. Accurately fitted joints with ends coped or mitered.
   3. Physical and thermal isolation of glazing from framing members.
   4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
   5. Provisions for field replacement of glazing from exterior.
   6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
   7. Components curved to indicated radii.

D. Factory-Assembled Frame Units:
   1. Rigidly secure nonmovement joints.
   2. Prepare surfaces that are in contact with structural sealant according to sealant manufacturer's written instructions, to ensure compatibility and adhesion.
   3. Preparation includes, but is not limited to, cleaning and priming surfaces.
   4. Seal joints watertight unless otherwise indicated.
   5. Install glazing to comply with requirements in Section 088000 "Glazing."

E. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.10 ALUMINUM FINISHES

A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   1. Color and Gloss: As selected by Architect from manufacturer's full range.

2.11 SOURCE QUALITY CONTROL

A. Structural Sealant: Perform quality-control procedures complying with ASTM C 1401 recommendations including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare surfaces that are in contact with structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.3 INSTALLATION

A. General:
   1. Comply with manufacturer's written instructions.
   2. Do not install damaged components.
   3. Fit joints to produce hairline joints free of burrs and distortion.
   4. Rigidly secure nonmovement joints.
   5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
   6. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding. Perform field welding under the same requirements as for shop welding.
   7. Thoroughly clean welds and adjacent burned areas on primed surfaces and paint the areas with priming paint of type used for shop coats, or zinc rich paint for galvanized steel.
   8. Seal joints watertight unless otherwise indicated.

B. Metal Protection:
   1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
   2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Install components plumb and true in alignment with established lines and grades.

D. Install field-glazed units according to Section 088000 "Glazing."

E. Install weatherseal sealant according to Section 079200 "Joint Sealants" and according to sealant manufacturer's written instructions, to produce weatherproof joints. Install joint filler behind sealant as recommended by sealant manufacturer.
3.4 ERECTION TOLERANCES

A. Erection Tolerances: Install structural-sealant-glazed curtain walls to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
3. Alignment:
   a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
   b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
   c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Field Quality-Control Testing: Perform the following test on mockup and representative areas of structural-sealant-glazed curtain walls during installation.

1. Air Infiltration: ASTM E 783 at 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article but not more than 0.09 cfm/sq. ft..
   a. Test Area: Two bays wide, but not less than 12 feet, by one story high of glazed aluminum curtain wall on mockup and in three separate locations on building facade as directed by Architect
   b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.

2. Water Penetration: ASTM E 1105 at a minimum uniform and cyclic static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft., and shall not evidence water penetration.
   a. Test Area: Two bays wide, but not less than 12 feet, by one story high of glazed aluminum curtain wall on mockup and in three separate locations on building facade as directed by Architect
   b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.

C. Structural-Sealant Adhesion: Test structural sealant according to recommendations in ASTM C 1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.
   1. Test a minimum of four areas on each building facade.
   2. Repair installation areas damaged by testing.

D. Structural-sealant-glazed curtain walls will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

END OF SECTION
PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Aluminum sliding transaction window for interior location.
   2. Aluminum u-channel framing for all-glass window walls.

1.2 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 080413.

B. Product Data: For each type of product.
   1. Include construction details, material descriptions, glazing and fabrication methods, dimensions of individual components and profiles, hardware, and finishes for aluminum windows.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Shop Drawings: For aluminum windows.
   1. Include plans, elevations, sections, hardware, accessories, insect screens, operational clearances, and details of installation, including anchor, flashing, and sealant installation.

E. Samples for Verification: For aluminum windows and components required, showing full range of color variations for finishes, and prepared on Samples of size indicated below:
   1. Exposed Finishes: 2 by 4 inches.
   2. Exposed Hardware: Full-size units.

F. Product Schedule: For aluminum windows. Use same designations indicated on Drawings.

1.3 QUALITY ASSURANCE

A. Manufacturer Qualifications: A manufacturer capable of fabricating aluminum windows that meet or exceed performance requirements indicated and of documenting this performance by test reports and calculations.

B. Installer Qualifications: An installer acceptable to aluminum window manufacturer for installation of units required for this Project.

C. Provide the following upon request:
   1. Qualification Data: For manufacturer and Installer.
   2. Product Test Reports: For each type of aluminum window, for tests performed by a qualified testing agency.
   3. Field quality-control reports.
1.4  COORDINATION

A. Coordinate location of u-channel framing with blockouts in concrete slab placement for flush recessed installation in floor.

1.5  WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace aluminum windows that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Failure to meet performance requirements.
   b. Faulty operation of movable sash and hardware.
   c. Deterioration of materials and finishes beyond normal weathering.

2. Warranty Period:
   a. Window: 5 years from date of Substantial Completion.
   b. Glazing Units: 5 years from date of Substantial Completion.
   c. Aluminum Finish: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1  INTERIOR SLIDING SERVICE TRANSACTION WINDOW, TYPE IWS-4

A. Basis-of-Design: Subject to compliance with requirements, provide Model DW1800A Deluxe Manual Aluminum Frame Sliding Service Windows manufactured by C.R. Laurence Co., Inc. (CRL), or comparable by Architect approved equal.

1. Frames: 6063-T5 extruded aluminum.
2. Window glides on top-hung full-length ball-bearing slides.
3. Configuration: OX
4. Size: Overall frame sizes in accordance with the Drawings.
5. Screen: Not required.
7. Glazing: Preglazed, 6.0 mm tempered.
8. Accessories:
   a. Keyed lock.
   b. Open counter area: solid surfacing countertop in accordance with Section 123661.16.

2.2  INTERIOR CHANNEL FRAMED GLAZING, TYPE IWS-2

A. Basis-of-Design: Subject to compliance with requirements, provide Wet/Dry Glaze U-Channel Framing manufactured by C.R. Laurence Co., Inc. (CRL) in model indicated, or comparable by Architect approved equal.

1. Frames: 6063-T5 extruded aluminum, minimum 0.063 inch thick.
2. Channel Size: Provide the following or Architect approved equal:
   a. Ceiling: Standard; CRL No. WU1BLSL/240; 1 inch by 1-1/2 inch high for top load roll-in glazing gasket for recessed in gypsum board above ceiling
b. Floor: Shallow; CRL No. WU3BLSL/240; 1 inch by 1 inch high for top load roll-in glazing gasket for recess in gypsum board partition for drop in glazing.

3. Gasket: Roll-in glazing gasket; CRL No. RGG12100; gray.
4. Glazing: 1/2 inch thick tempered and laminated butt glazing complying with section 088000 “Glazing.”
   a. Interlayer: Translucent
6. Accessories:
   a. Provide metal anchor plate in ceiling for attachment to structure with angle framing or hung with threaded rods.
   b. End caps.
   c. Glazing shims.

2.3 FABRICATION

A. Fabricate aluminum windows in sizes indicated. Include a complete system for assembling components and anchoring windows.

2.4 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM’s "Metal Finishes Manual" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.5 ALUMINUM FINISHES

A. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine openings, substrates, structural support, anchorage, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify rough opening dimensions, levelness of sill plate, and operational clearances at transaction windows.

C. Verify concrete recess for flush u-channel installation.
D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions for installing windows, hardware, accessories, and other components.

B. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support.

C. Separate aluminum and other corrodirable surfaces from sources of corrosion or electrolytic action at points of contact with other materials.

3.3 ADJUSTING, CLEANING, AND PROTECTION

A. Adjust operating sashes and hardware for a tight fit at contact points and weather stripping for smooth operation and weathertight closure.

B. Clean exposed surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.
   1. Keep protective films and coverings in place until final cleaning.

C. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.

D. Protect window surfaces from contact with contaminating substances resulting from construction operations. If contaminating substances do contact window surfaces, remove contaminants immediately according to manufacturer's written instructions.

END OF SECTION
SECTION 087100 – DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:
   1. Swinging doors.
   2. Sliding doors.
   3. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:
   1. Mechanical door hardware.
   2. Electromechanical door hardware.
   3. Automatic operators.
   4. Cylinders specified for doors in other sections.

C. Related Sections:
   1. Division 08 Section “Hollow Metal Doors and Frames”.
   2. Division 08 Section “Flush Wood Doors.”
   3. Division 08 “Sound-Control Doors.”
   4. Division 08 Aluminum Storefront Entrances.”
   5. Division 08 Section “Automatic Door Operators”.
   6. Division 28 Section “Access Control”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.
   6. NFPA 105 - Installation of Smoke Door Assemblies.
   7. UL/ULC and CSA C22.2 – Standards for Automatic Door Operators Used on Fire and Smoke Barrier Doors and Systems of Doors.
   8. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards:
   1. ANSI/BHMA Certified Product Standards - A156 Series
   2. UL10C – Positive Pressure Fire Tests of Door Assemblies
1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:
   a. Type, style, function, size, label, hand, and finish of each door hardware item.
   b. Manufacturer of each item.
   c. Fastenings and other pertinent information.
   d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
   e. Explanation of abbreviations, symbols, and codes contained in schedule.
   f. Mounting locations for door hardware.
   g. Door and frame sizes and materials.
   h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
   a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
   b. Complete (risers, point-to-point) access control system block wiring diagrams.
   c. Wiring instructions for each electronic component scheduled herein.
2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Informational Submittals:
   1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

F. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals.

1.4 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

C. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

D. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.
   1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
   2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

E. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

F. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:
1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

G. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

   1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
   2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
   3. Review sequence of operation narratives for each unique access controlled opening.
   4. Review and finalize construction schedule and verify availability of materials.
   5. Review the required inspecting, testing, commissioning, and demonstration procedures

H. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.
C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.

D. Special Warranty Periods:
   1. Seven years for heavy duty cylindrical (bored) locks and latches.
   2. Five years for exit hardware.
   3. Ten years for manual surface door closer bodies.
   4. Fifteen years for manual surface door closer bodies.
   5. Twenty five years for manual surface door closer bodies.
   6. Twenty five years for manual surface door closer bodies.
   7. Twenty five years for manual surface door closer bodies.
   8. Two years for electromechanical door hardware.

1.8 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.

B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:
1. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.

C. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.2 HANGING DEVICES

A. Hinges: ANSI/BHMA A156.1 certified butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:
   a. Two Hinges: For doors with heights up to 60 inches.
   b. Three Hinges: For doors with heights 61 to 90 inches.
   c. Four Hinges: For doors with heights 91 to 120 inches.
   d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
   a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.
   b. Sizes from 3'1" to 4'0": 5" standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
   a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
   b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:
   a. Non-removable Pins: Provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Cam Lift Hinges: Where specified provide hinges that move the door up and then lower it to create a tight seal when the door is closed.

6. Manufacturers:
   a. Bommer Industries (BO).
   b. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK).

B. Pivots: ANSI/BHMA A156.4, Grade 1, certified. Space intermediate pivots equally not less than 25 inches on center apart or not more than 35 inches on center for doors over 121 inches high. Pivot hinges to have oil impregnated bronze bearing in the top pivot and a radial roller and
thrust bearing in the bottom pivot with the bottom pivot designed to carry the full weight of the door. Pivots to be UL listed for windstorm where applicable.

1. Manufacturers:
   a. Architectural Builders Hardware (AH).
   b. Rixson Door Controls (RF).

2.3 POWER TRANSFER DEVICES

A. Electrified Quick Connect Data Transfer Hinges: Provide combined electrified power and Ethernet data transfer hinges with Molex™ standardized plug connectors to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

   1. Data transfer hinges feature two 6-position and two 4-position Molex connectors, 9 multi-strand wires; 2 twisted pairs (26 AWG), 4 straight conductors (28 gauge) and 1 straight conductor (22 AWG) with concealed plug connectors eliminating the need for separate or exposed wiring. Rated 350 mA continuous @ 48 volts DC nominal, the hinge is capable of two PoE wiring configurations:
      a. Power over Data (5 wire): Power and Data supplied together over the 2 twisted 26 AWG pairs. The 22 AWG conductor is used for the earth ground connection.
      b. Data with Power over Spares (9 wire): Data over 2 twisted (26 AWG) pairs with Power over spare pairs 94 straight 28 AWG conductors. The 22 Awg conductor is used for earth ground connection.

2. Manufacturers:
   b. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK) – PoE Series.
   c. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE) – PoE Series.

B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.

   1. Provide one each of the following tools as part of the base bid contract:
2. Manufacturers:

2.4 DOOR OPERATING TRIM

A. Flush Bolts and Surface Bolts: ANSI/BHMA A156.3 and A156.16, Grade 1, certified.

1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
2. Furnish dust proof strikes for bottom bolts.
3. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
5. Manufacturers:

a. Burns Manufacturing (BU).
   b. Door Controls International (DC).
   c. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

B. Coordinators: ANSI/BHMA A156.3 certified door coordinators consisting of active-leaf, hold-open lever and inactive-leaf release trigger. Model as indicated in hardware sets.

1. Manufacturers:

   a. Burns Manufacturing (BU).
   b. Door Controls International (DC).
   c. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

C. Door Push Plates and Pulls: ANSI/BHMA A156.6 certified door pushes and pulls of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.

1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
4. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.
5. Manufacturers:

   a. Burns Manufacturing (BU).
   b. Hiawatha, Inc. (HI).
c. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

2.5 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

B. Cylinders: Original manufacturer cylinders complying with the following:
   1. Mortise Type: Threaded cylinders with rings and cam to suit hardware application.
   2. Rim Type: Cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
   3. Bored-Lock Type: Cylinders with tailpieces to suit locks.
   4. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.

C. Permanent Cores: Facility standard; finish face to match lockset; complying with the following:
   1. Interchangeable Cores: Core insert, removable by use of a special key; usable with other manufacturers' cylinders.

D. Permanent Cores: Match Facility standard Schlage Everest Primus.
   1. Interchangeable Cores: Core insert, removable by use of a special key; usable with other manufacturers' cylinders.
   2. Removable Cores: Core insert, removable by use of a special key, and for use with only the core manufacturer's cylinder and door hardware. Provide removable core (small or large format) as specified in Hardware Sets.

E. Keying System: Each type of lock and cylinders to be factory keyed.
   1. Conduct specified "Keying Conference" to define and document keying system instructions and requirements.
   2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
   3. Existing System: Key locks to Owner's existing Primus system.

F. Key Quantity: Provide the following minimum number of keys:
   1. Change Keys per Cylinder: Two (2)
   2. Master Keys (per Master Key Level/Group): Five (5).

G. Construction Keying: Provide temporary keyed construction cores.

H. Key Registration List (Bitting List):
   1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
   2. Provide transcript list in writing or electronic file as directed by the Owner.
I. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.

1. Manufacturers:
   a. Lund Equipment (LU).
   b. MMF Industries (MM).
   c. Telkee (TK).

J. Key Control Software: Provide one network version of “Key Wizard” branded key management software package that includes one year of technical support and upgrades to software at no charge. Provide factory key system formatted for importing into “Key Wizard” software.

2.6 MECHANICAL LOCKS AND LATCHING DEVICES

A. Cylindrical Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.2, Series 4000, Grade 1 certified.

1. Furnish with solid cast levers, standard 2 3/4" backset, and 1/2" (3/4" at rated paired openings) throw brass or stainless steel latchbolt.

2. Locks are to be non-handed and fully field reversible.

3. Extended cycle test: Locks to have been cycle tested in ordinance with ANSI/BHMA 156.2 requirements to 2 million cycles.

4. Manufacturers:
   a. Sargent Manufacturing (SA) – 10 Line.
   b. Schlage (SC) – ND Series.

2.7 WIRELESS ACCESS CONTROL LOCKS

A. Wireless Access Control Mortise Locks: Wireless technology ANSI/BHMA A156.13 Grade 1 mortise lockset with integrated card reader, deadbolt monitoring, and request-to-exit and door position switch signaling in one complete unit. Motor driven locking/unlocking control of the lever handle trim, 3/4" deadlocking anti-friction latch, and 1" case-hardened steel deadbolt (optional). Lock is U.L listed and labeled for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override.

1. Wireless access control mortise locks interface using local wireless connection between the lock unit and a communication hub located directly above the door. Communication hub connected via RS-485 to a new or existing online electronic access control system platform.

2. Fully-encrypted AES 128 wireless communication between lock and communication hub (IEEE 802.15.4, 2.4 GHz) with no proprietary programming device requirements. Locks will continue functional operation independent of wireless connection slowdown or failure.

3. Integrated card reader supports 125kHz proximity credentials; 13.56 MHz contactless credentials: HID® iCLASS (full authentication, all formats), Mifare Classic (Sector and
UID), DESFire; and CSN (Card Serial Number) reads for other common 13.56 MHz cards, including ISO 14443 A/B and ISO 15693.

4. User Interfaces: Keypad/Proximity, Proximity Only, Keypad/iCLASS, and iCLASS only, locks with a minimum of 2,000 user codes and the ability to audit the last 10,000 transactions.

5. Power Source: 6 AA alkaline batteries power supply with LED indication of locked, programming mode and low capacity warning status conditions.

6. Energy Efficient Design: Provide lock bodies which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.

7. Outside lever rigid except when in "office" mode or valid user code is entered. Emergency override access capability with optional mechanical key cylinder retraction of lock latch bolt without necessary electronic activation.

8. Complete installation to include manufacturer's Installation Tool and USB Radio Dongle for initial lock set-up and configuration. Electronic on-line access control system platform, including communication cabling and software, by others.

9. Manufacturers:

   a. Sargent Manufacturing (SA) - Profile - N2 8200 Series.

B. Wireless Access Control Mortise Locks: Wireless technology ANSI/BHMA A156.13 Grade 1 mortise lockset with integrated card reader, deadbolt monitoring, and request-to-exit and door position switch signaling in one complete unit. Motor driven locking/unlocking control of the lever handle trim, 3/4" stainless steel latch, and optional 1" deadbolt with hardened inserts. Lock is U.L listed and labeled for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override.

   1. Wireless access control cylindrical locks interface using local wireless connection between the lock unit and a nearby communication hub. Communication hub connected via RS-485 or Wiegand to a new or existing online electronic access control system platform.

   2. Fully-encrypted AES 128 wireless communication between lock and communication hub (IEEE 802.15.4, 2.4 GHz) with no proprietary programming device requirements. Locks will continue functional operation independent of wireless connection slowdown or failure.

   3. Integrated card reader supports 125kHz proximity credentials; 13.56 MHz contactless credentials: HID® iCLASS (full authentication, all formats, including SEOS), Mifare Classic (Sector and UID), DESFire, NFC-enabled mobile phones.

   4. Lockdown capability with maximum 10 second response.

   5. Patent pending credential cache to ensure offline access.

   6. Power Source: 6 AA alkaline batteries power supply with LED indication of locked, programming mode and low capacity warning status conditions.

   7. Energy Efficient Design: Provide lock bodies which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.

   8. Outside lever rigid except when valid user code is entered. Emergency override access capability with optional mechanical key cylinder retraction of lock latch bolt without necessary electronic activation.

   9. Communication Hub: Provide the necessary number of hubs which is connected to the access control system via RS-485 or Wiegand as required by the system. Provide hubs factory paired with the locks, but allow for field configuration as needed.

10. Complete installation to include manufacturer's Installation Tool and USB Radio Dongle for initial lock set-up and configuration. Electronic on-line access control system platform, including communication cabling and software, by others.
11. Manufacturers:
   a. Corbin Russwin Hardware (RU) – IN100 – ML2000 Series.
   b. Sargent Manufacturing (SA) – IN100 – 7900 Series.

C. Wireless Access Control Cylindrical Locks: Wireless technology ANSI/BHMA A156.2 Grade 1 cylindrical lockset with integrated card reader and request-to-exit signaling in one complete unit. Separate DPS connects directly to lock electronics for door position (open/closed status) monitoring. Motor driven locking/unlocking control of the lever handle trim with 1/2” deadlocking stainless steel latch. Lock is U.L listed and labeled for use on up to 3 hour fire rated openings.

1. Wireless access control cylindrical locks interface using local wireless connection between the lock unit and a communication hub located directly above the door. Communication hub connected via RS-485 to a new or existing online electronic access control system platform.
2. Fully-encrypted AES 128 wireless communication between lock and communication hub (IEEE 802.15.4, 2.4 GHz) with no proprietary programming device requirements. Locks will continue functional operation independent of wireless connection slowdown or failure.
3. Integrated card reader supports 125kHz proximity credentials; 13.56 MHz contactless credentials: HID® iCLASS (full authentication, all formats), Mifare Classic (Sector and UID), DESFire; and CSN (Card Serial Number) reads for other common 13.56 MHz cards, including ISO 14443 A/B and ISO 15693.
4. User Interfaces: Keypad/Proximity, Proximity Only, Keypad/iCLASS, and iCLASS only, locks with a minimum of 2,000 user codes and the ability to audit the last 10,000 transactions.
5. Power Source: 6 AA alkaline batteries power supply with LED indication of locked, programming mode and low capacity warning status conditions.
6. Outside lever rigid except when in "office" mode or valid user code is entered. Emergency override access capability with optional mechanical key cylinder retraction of lock latch bolt without necessary electronic activation.
7. Complete installation to include manufacturer's Installation Tool and USB Radio Dongle for initial lock set-up and configuration. Electronic on-line access control system platform, including communication cabling and software, by others.

8. Manufacturers:
   a. Sargent Manufacturing (SA) - Profile - N2 10-Line Series.

D. Wireless Access Control Cylindrical Locks: Wireless technology ANSI/BHMA A156.2 Series 4000 Grade 1 cylindrical lockset with integrated card reader and request-to-exit signaling in one complete unit. Separate DPS connects directly to lock electronics for door position (open/closed status) monitoring. Motor driven locking/unlocking control of the lever handle trim with 1/2” deadlocking stainless steel latch. Lock is U.L listed and labeled for use on up to 3 hour fire rated openings.

1. Wireless access control cylindrical locks interface using local wireless connection between the lock unit and a nearby communication hub. Communication hub connected via RS-485 or Wiegand to a new or existing online electronic access control system platform.
2. Fully-encrypted AES 128 wireless communication between lock and communication hub (IEEE 802.15.4, 2.4 GHz) with no proprietary programming device requirements. Locks will continue functional operation independent of wireless connection slowdown or failure.
3. Integrated reader supports HID® 125kHz proximity credentials; or ISO 14443 A/B and ISO 15693 13.56 MHz contactless credentials: HID® iCLASS/iCLASS SE (full
authentication, all formats), MIFARE Classic, DESFire EV1 (full authentication, all formats); or Near Field Communications (NFC); or HID® SIO enabled.

4. Power Source: 6 AA alkaline batteries power supply with LED indication of locked, programming mode and low capacity warning status conditions.

5. Outside lever rigid except when valid user code is entered. Emergency override access capability with optional mechanical key cylinder retraction of lock latch bolt without necessary electronic activation.

6. Communication Hub: Provide the necessary number of hubs which is connected to the access control system via RS-485 or Wiegand as required by the system. Provide hubs factory paired with the locks, but allow for field configuration as needed.

7. Complete installation to include manufacturer's Installation Tool and USB Radio Dongle for initial lock set-up and configuration. Electronic on-line access control system platform, including communication cabling and software, by others.

8. Manufacturers:
   a. Corbin Russwin Hardware (RU) – IN100 – CL33800 Series.
   b. Sargent Manufacturing (SA) – IN100 10 Line Series.

1. Wireless access control trim interfaces using local wireless connection between the lock unit and a nearby communication hub. Communication hub connected via RS-485 or Wiegand to a new or existing online electronic access control system platform.

2. Fully-encrypted AES 128 wireless communication between lock and communication hub (IEEE 802.15.4, 2.4 GHz) with no proprietary programming device requirements. Locks will continue functional operation independent of wireless connection slowdown or failure.

3. Integrated card reader supports 125kHz proximity credentials or 13.56 MHz contactless credentials (full authentication, all formats).

4. Power Source: 4 AA alkaline batteries power supply with LED indication of locked, programming mode and low capacity warning status conditions.

5. Lever is rigid except when valid user code is entered. Emergency override access capability with optional mechanical key cylinder retraction of lock latch bolt without necessary electronic activation.

6. Communication Hub: Provide the necessary number of hubs which are connected to the access control system via RS-485 or Wiegand as required by the system. Provide hubs factory paired with the locks, but allow for field configuration as needed.

7. Manufacturers:
   a. Adams Rite (AD) – A100-3090 Series.

F. Wireless Access Control Cabinet Locks: Wireless technology ANSI/BHMA A156.2 Grade 1 cabinet lock with integrated card reader.

1. Wireless access control cabinet locks interface using local wireless connection between the lock unit and a communication hub located directly above the door. Communication hub connected via RS-485 to a new or existing online electronic access control system platform.

2. Fully-encrypted AES 128 wireless communication between lock and communication hub (IEEE 802.15.4, 2.4 GHz) with no proprietary programming device requirements.

3. Integrated card reader supports 125kHz proximity credentials; 13.56 MHz contactless HID® iCLASS (full authentication, all formats) credentials.
4. User Interfaces: Proximity Only, or iCLASS only. Locks with a minimum of 2,000 user codes and the ability to audit the last 10,000 transactions.
5. Power Source: One CR123A battery.
6. Complete installation to include manufacturer's Installation Tool and USB Radio Dongle for initial lock set-up and configuration. Electronic on-line access control system platform, including communication cabling and software, by others.

7. Manufacturers:
   a. HES (HS) – K100 Series.

G. Wireless Access Control Server Cabinet Locks: Wireless technology ANSI/BHMA A156.11 High Security Grade 1 cabinet lock with integrated card reader. Provide with or without key override feature as indicated in the hardware sets.
   1. Wireless access control cabinet locks interface using local wireless connection between the lock unit and a communication hub located directly above the door. Communication hub connected via RS-485 or Wiegand to a new or existing online electronic access control system platform.
   2. Fully-encrypted AES 128 wireless communication between lock and communication hub (IEEE 802.15.4, 2.4 GHz) with no proprietary programming device requirements.
   3. Integrated card reader supports 125kHz proximity credentials; 13.56 MHz contactless HID® iCLASS (full authentication, all formats) credentials.
   4. User Interfaces: Proximity Only, or iCLASS only. Locks with a minimum of 2,000 user codes and the ability to audit the last 10,000 transactions.
   5. Power Source: One CR123A battery.
   6. Complete installation to include manufacturer's Installation Tool and USB Radio Dongle for initial lock set-up and configuration. Electronic on-line access control system platform, including communication cabling and software, by others.

7. Manufacturers:
   a. HES (HS) – KS100 Series.

2.8 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:
   1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
   2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
   3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
   4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:
   2. Strikes for Bored Locks and Latches: BHMA A156.2.
   3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
   4. Dustproof Strikes: BHMA A156.16.
2.9 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.

2. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.

3. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.

4. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.

5. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.

   a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.

   b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

6. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.

7. Rim Exit Devices: Exit device rails shall release with less than 5 pounds of pressure per the California Building Code.

8. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.

10. Rail Sizing: Provide exit device rails factory sized for proper door width application.

11. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 certified panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be stainless steel, pullman type, with deadlock feature.

   1. Manufacturers:

      a. Sargent Manufacturing (SA) - 80 Series.

      b. Von Duprin (VD) - 35A/98 XP Series.
C. Tubular Panic Devices: Certified panic devices conforming to ANSI/BHMA A156.3, Grade 1 Certified complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Device to be ADA compliant requiring less than 5 lbs. of force to activate and meet California Building Code (2013) Sec 11B.309.4. Post mounting with optional mechanical dogging. Provide proper fasteners as required by manufacturer to meet application requirements. Provide exit devices on both leaves of pairs of doors.

1. Style: Exposed vertical rod. 1-1/4" grip diameter with interior operating panic handle in combination with exterior fixed pull handle. Panic mechanism shall be concealed within brass or stainless steel tubing. Optional entrance from exterior by a keyed cylinder.

2. Configurations (provide as specified):
   a. Full Height L-Shape Pull.
   b. Half Height L-Shape Pull.
   c. Full Height Straight Pull.
   d. Half Height Straight Pull.
   e. Half Height Centered Straight Pull.
   f. Horizontal Straight Pull.
   g. Exit Only (No Exterior Pull).

3. Push/pull operation when dogged from the inside.
5. Engraved "PUSH" signage with optional paint infill and boundary grooves.

6. Manufacturers:
   a. ASSA ABLOY Glass Solutions (GS) - PDU8500 Series

D. Tube Steel Removable Mullions: ANSI/BHMA A156.3 removable steel mullions with malleable-iron top and bottom retainers and a primed paint finish.

1. Provide keyed removable feature where specified in the Hardware Sets.
2. Provide stabilizers and mounting brackets as required.
3. Provide electrical quick connection wiring options as specified in the hardware sets.

4. Manufacturers:
   a. Corbin Russwin Hardware (RU) - 700/900 Series.
   b. Sargent Manufacturing (SA) - 980S Series.
   c. Yale Locks and Hardware (YA) - M200 Series.

2.10 WIRELESS ACCESS CONTROL EXIT DEVICES

A. Wireless Access Control Exit Hardware: Wireless technology ANSI/BHMA A156.3 Grade 1 rim and mortise exit device hardware with integrated card reader. Separate DPS connects directly to exit hardware electronics for door position (open/closed status) monitoring. Motor driven locking/unlocking control of the lever handle exit trim with 3/4" throw latch bolt. U.L listed and labeled for either panic or "fire exit hardware" for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override trim.
1. Wireless access control exit hardware interfaces using local wireless connection between the electronic exit trim and a communication hub located directly above the door. Communication hub connected via RS-485 to a new or existing online electronic access control system platform.

2. Fully-encrypted AES 128 wireless communication between lock and communication hub (IEEE 802.15.4, 2.4 GHz) with no proprietary programming device requirements. Locks will continue functional operation independent of wireless connection slowdown or failure.

3. Integrated card reader supports 125kHz proximity credentials; 13.56 MHz contactless credentials: HID® iCLASS (full authentication, all formats), Mifare Classic (Sector and UID), DESFire; and CSN (Card Serial Number) reads for other common 13.56 MHz cards, including ISO 14443 A/B and ISO 15693.

4. User Interfaces: Keypad/Proximity, Proximity Only, Keypad/iCLASS, and iCLASS only, locks with a minimum of 2,000 user codes and the ability to audit the last 10,000 transactions.

5. Power Source: 6 AA alkaline batteries power supply with LED indication of locked, programming mode and low capacity warning status conditions.

6. Outside lever rigid except when in "passage" mode or valid user code is entered. Emergency override access capability with optional mechanical key cylinder retraction of exit device latch without necessary electronic activation.

7. Complete installation to include manufacturer's Installation Tool and USB Radio Dongle for initial lock set-up and configuration. Electronic on-line access control system platform, including communication cabling and software, by others.

8. Manufacturers:

   1) Sargent Manufacturing (SA) - Profile - N2 80 Series.

B. Wireless Access Control Exit Hardware: Wireless technology ANSI/BHMA A156.3 Grade 1 rim and mortise exit device hardware with integrated card reader. Separate DPS connects directly to exit hardware electronics for door position (open/closed status) monitoring. Motor driven locking/unlocking control of the lever handle exit trim with 3/4" throw latch bolt. U.L listed and labeled for either panic or "fire exit hardware" for use on up to 3 hour fire rated openings.

   Available with or without keyed high security cylinder override trim.
2.11 DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers including installation and adjusting information on inside of cover.

2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.

3. Cycle Testing: Provide closers which have surpassed 15 million cycles in a test witnessed and verified by UL.

4. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the physically handicapped, provide units complying with ANSI ICC/A117.1.

5. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.

6. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.

7. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Large Body Cast Iron): ANSI/BHMA A156.4, Grade 1 surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control.

1. Manufacturers:
   a. LCN Closers (LC) – 4040XP Series.
   b. Norton Door Controls (NO) – 9500 Series.

2.12 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 certified door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor
stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Manufacturers:
   a. Burns Manufacturing (BU).
   b. Hiawatha, Inc. (HI).
   c. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

C. Overhead Door Stops and Holders: ANSI/BHMA A156.6, Grade 1 certified overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.

   1. Manufacturers:
      a. Rixson Door Controls (RF).
      b. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).
      c. Sargent Manufacturing (SA).

2.13 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

   1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

   1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NPFA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

   1. National Guard Products (NG).
   2. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).
2.14  FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.15  FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer’s standards, but in no case less than specified by referenced standards for the applicable units of hardware.

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1  EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2  PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

3.3  INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer’s written instructions and according to specifications.

   1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."

3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."

4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection: Supplier will perform a final inspection of installed door hardware and state in report whether work complies with or deviates from requirements, including whether door hardware is properly installed, operating and adjusted.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements. Maximum opening force 5lb max for interior doors and 15lbs max. for fire rated and exterior doors.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.
### 3.7 DEMONSTRATION

A. Instruct Owner’s maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

### 3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

B. The supplier is responsible for handing and sizing all products and providing the correct option for the appropriate door type and material where more than one is presented in the hardware sets. Quantities listed are for each pair of doors, or for each single door.

END OF SECTION
SECTION 087113 - AUTOMATIC DOOR OPERATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Low-energy door operators for swinging doors.

1.3 DEFINITIONS
   A. AAADM: American Association of Automatic Door Manufacturers.
   B. Activation Device: A control that, when actuated, sends an electrical signal to the door operator to open the door.
   C. Safety Device: A control that, to avoid injury, prevents a door from opening or closing.
   D. For automatic door terminology, see BHMA A156.19 for definitions of terms.

1.4 COORDINATION
   A. Coordinate sizes and locations of recesses in concrete floors for recessed control mats that control automatic door operators. Concrete, reinforcement, and formwork requirements are specified elsewhere.
   B. Templates: Distribute for doors, frames, and other work specified to be factory prepared and reinforced for installing automatic door operators.
   C. Coordinate hardware for doors with operators to ensure proper size, thickness, hand, function, and finish.
   D. Electrical System Roughing-in: Coordinate layout and installation of automatic door operators with connections to power supplies.

1.5 ACTION SUBMITTALS
   A. Product Data: For each type of product.
      1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for automatic door operators.
      2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For automatic door operators.
   1. Include plans, elevations, sections, hardware mounting heights, and attachment details.
   2. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Indicate locations of activation and safety devices.
   4. Include diagrams for power, signal, and control wiring.

D. Samples: For each exposed product and for each color and texture specified, manufacturer's standard size.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For automatic door operators, safety devices, and control systems, to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer for installation and maintenance of units required for this Project.

B. Certified Inspector Qualifications: Certified by AAADM.

C. Provide the following upon request:
   1. Qualification Data: For Installer and Certified Inspector.
   2. Product Certificates: For each type of automatic door operator.
   3. Field quality-control reports.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of automatic door operators that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Faulty or sporadic operation of automatic door operator, including controls.
      b. Deterioration of metals, metal finishes, and other materials beyond normal weathering or use.
   2. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Besam Entrance Solutions; Subsidiary of ASSA ABLOY Entrance Systems.
   2. DORMA Automatics; Div. of DORMA Group North America.
3. Horton Automatics; a division of Overhead Door Corporation.
4. LCN Closers; an Ingersoll-Rand company.

B. Source Limitations: Obtain automatic door operators, including activation and safety devices, from single source from single manufacturer.

2.2 AUTOMATIC DOOR OPERATORS, GENERAL

A. General: Provide operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated; and according to UL 325. Coordinate operator mechanisms with door operation, hinges, and activation and safety devices.

1. Emergency Breakaway: Where indicated for center-pivoted doors, provide emergency breakaway feature for reverse swing of doors. Equip system to discontinue power to automatic door operator when door is in emergency breakaway position, to return door to closed position after breakaway, and to automatically reset.

2. Wind Load: Provide door operators on exterior doors that will open and close doors and maintain them in fully closed position when subjected to wind load of <Insert wind load>.

B. Electromechanical Operating System: Self-contained unit powered by permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor, connections for power and activation- and safety-device wiring, and manual operation including spring closing when power is off.

C. Hinges: See Section 087100 "Door Hardware" for hinge type for each door that door operator shall accommodate.

D. Housing for Overhead Concealed Operators: Fabricated from minimum 0.125-inch-thick, extruded or formed aluminum and extending full width of door opening including door jambs to conceal door operators and controls. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.

E. Brackets and Reinforcements: Fabricated from aluminum with nonstaining, nonferrous shims for aligning system components.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 LOW-ENERGY DOOR OPERATORS

A. Standard: BHMA A156.19.

B. Performance Requirements:

1. Opening Force if Power Fails: Not more than 15 lbf required to release latch if provided, not more than 30 lbf required to manually set door in motion, and not more than 15 lbf required to fully open door.

2. Entrapment-Prevention Force: Not more than 15 lbf (67 N) required to prevent stopped door from closing or opening.

C. Configuration: Operator to control pair of swinging doors and single doors as indicated.

D. Operation: Power opening and power-assisted spring closing. Provide time delay for door to remain open before initiating closing cycle as required by BHMA A156.19. When not in automatic mode, door operator shall function as manual door closer, with or without electrical power.

E. Operating System: Electromechanical.

F. Microprocessor Control Unit: Solid-state controller.

G. Features:
   1. Adjustable opening and closing speed.
   2. Adjustable opening and closing force.
   3. Adjustable backcheck.
   4. Adjustable hold-open time from zero to 30 seconds.
   5. Adjustable time delay.
   6. Adjustable acceleration.
   7. Obstruction recycle.
   8. On-off/hold-open switch to control electric power to operator; key operated.

H. Activation Device: Push-plate switch on each side of door to activate door operator.

I. Exposed Finish: Finish matching door and frame.

2.4 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
   1. Extrusions: ASTM B 221.

B. Fasteners and Accessories: Corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

2.5 CONTROLS

A. General: Provide controls, including activation and safety devices, according to BHMA standards; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for occupancy type indicated. Coordinate activation and safety devices with door operation and door operator mechanisms.

B. Push-Plate Switch: Momentary-contact door control switch with flat push-plate actuator with contrasting-colored, engraved message.
   1. Configuration: Vertically-mounted, 36-inch-high, low profile, rectangular push plate with 2-by-4-inch junction box.
      a. Mounting: Surface mounted on wall on egress side of door opening, and pedestal mounted on entry side of door opening.
      b. Reference Standard: Meet or exceed CBC Section 1117B.6.
c. Basis-of-Design Product: Subject to compliance with requirements, provide Model No. LPR36 Low Profile Push Plate as manufactured by BEA, Inc., or Architect approved equal.

C. Electrical Interlocks: Unless units are equipped with self-protecting devices or circuits, provide electrical interlocks to prevent activation of operator when door is locked, latched, or bolted.

2.6 FABRICATION

A. Factory fabricate automatic door operators to comply with indicated standards.

B. Form aluminum shapes before finishing.

C. Fabricate exterior components to drain condensation and water passing joints within operator enclosure to the exterior.

D. Use concealed fasteners to greatest extent possible. Where exposed fasteners are required, use countersunk Phillips flat-head machine screws, finished to match operator.

2.7 ACCESSORIES

A. Signage: As required by cited BHMA standard for type of door and its operation.
   2. Provide sign materials with instructions for field application when operators are installed.

2.8 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.

B. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances, door and frame preparation and reinforcements, and other conditions affecting performance of automatic door operators.

B. Examine roughing-in for electrical systems to verify actual locations of power connections before automatic door operator installation.
3.2 INSTALLATION

A. General: Install automatic door operators according to manufacturer’s written instructions and cited BHMA standard for type of door operation and direction of pedestrian travel, including signage, controls, wiring, remote power units if any, and connection to building’s power supply.

1. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion.
2. Install operators true in alignment with established lines and door geometry without warp or rack. Anchor securely in place.

B. Controls: Install activation and safety devices according to manufacturer’s written instructions and cited BHMA standard for operator type and direction of pedestrian travel. Connect control wiring according to Division 26 section for "Low-Voltage Electrical Power Conductors and Cables."

C. Access-Control System: Connect operators to access-control system as specified in Division 28 section for "Access Control."

D. Signage: Apply on both sides of each door as required by cited BHMA standard for type of door operator and direction of pedestrian travel.

3.3 FIELD QUALITY CONTROL

A. Certified Inspector: Engage a Certified Inspector to test and inspect components, assemblies, and installations, including connections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Test and inspect each automatic door operator installation, using AADDM inspection forms, to determine compliance of installed systems with applicable BHMA standards.

C. Automatic door operators will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust automatic door operators to function smoothly, and lubricate as recommended by manufacturer; comply with requirements of applicable BHMA standards.

1. Adjust operators on exterior doors for weathertight closure.

B. After completing installation of automatic door operators, inspect exposed finishes on doors and operators. Repair damaged finish to match original finish.

C. Readjust automatic door operators and controls after repeated operation of completed installation equivalent to three days’ use by normal traffic (100 to 300 cycles).
D. Occupancy Adjustment: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train District's maintenance personnel to adjust, operate, and maintain automatic door operators.

END OF SECTION
SECTION 088000 – GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:
1. Windows.
2. Doors.
4. Storefront framing.
5. Glazed entrances.
6. Interior borrowed lites.

B. Related Work: Install glazing in the following assemblies
1. Section 084113 "Aluminum-Framed Entrances and Storefronts."
2. Section 084216 "Interior Aluminum Storefront Frames."
3. Section 084413 "Glazed Aluminum Curtain Walls" for glazing sealants.
4. Section 084423 "Structural-Sealant-Glazed Curtain Walls" for structural and glazing sealants.
5. Section 085113 "Miscellaneous Interior Aluminum Windows" for glazing system for pre-glazed aluminum transaction windows and u-channel aluminum framed glazing.

C. Related Requirements:
1. Section 088300 "Mirrors."
2. Section 088813 "Fire Resistant Glazing and Framing."

1.3 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, as defined in referenced glazing publications.

B. Glass Fabrication: Using primary glass in the production of single pane glass products such as coated, laminated and heat treated glass. Can be done by either the Glass Manufacturer or the Glazing Product Manufacturer.

C. Glazing Product Manufacturer: Firm that uses fabricated glass in the production of insulating glass (multiple panes of glass).

D. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.
E. Large Glass Lites and Insulating Glass Units: over 55 SF.

F. Interspace: Space between lites of a conventional insulating-glass unit.

1.4 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Delegated Design: Design glass, including comprehensive engineering analysis according to ASTM E 1300 by a qualified professional engineer, using the following design criteria:

1. Design Wind Pressures: As indicated on Drawings.
2. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical, design glass to resist design wind pressure based on glass type factors for short-duration load.
3. Probability of Breakage:
   a. For glass surfaces sloped no more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.008 (8 per 1000).
4. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch, whichever is less.
5. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.

1. Testing will not be required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
3. Test no fewer than [eight] <Insert number> Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.6 ACTION SUBMITTALS

A. Product Data: For each glass product and glazing material indicated.
B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings:
   1. Submit Shop Drawings of glazing details. Draw details at least full size (twice full size preferred) and indicate dimensions, tolerances and materials.
   2. Submit Shop Drawings for structural sealant glazing after review and approval of Shop Drawings by sealant and glass product manufacturers.

D. Glass Samples: With each submittal, submit a list of all glass Styles required in the Project. On the list, indicate which Styles are included in the submittal.
   1. Each style of monolithic and laminated glass, except clear monolithic glass, no less than 75 by 150 mm (3 by 6 inches).
   2. Each style of insulating and insulating laminated glass unit, no less than 300 by 300 mm (12 by 12 inches), including type of edge seal, spacer, and corner construction of spacer. Identify specific type of reflective and low-emissivity coated glasses, coated surfaces, and exterior face of unit.

E. Exposed Glazing Accessory Samples: For gaskets, sealants and colored spacers, in 12-inch lengths. Install sealant Samples between two strips of material representative in color of the adjoining framing system after sealant color selection has been made.

F. Other Glazing Accessory Samples:
   1. Compression wedge, 150 mm (6 inches) long.
   2. Channel gasket, 150 mm (6 inches) long.
   3. Bed gasket, 150 mm (6 inches) long.
   4. Setting block.
   5. Edge block.
   6. Compressible filler.

G. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

H. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

I. Preconstruction adhesion and compatibility test report.

J. Quality Assurance Program (QAP)
   1. Glass fabrication: Written QAP including but not limited to reference of applicable ASTM testing methodology, type and frequency of in-line monitoring of glass fabrication, and reporting and documentation. Test sample lite of glass, at GC’s expense, for conformance to a) bow and warp, b) localized distortion / roller wave, c) concavity / convexity and d) compression strength.
   2. Installation: Written QAP to monitor quality of products such as cleaners, solvents, primers, and sealants; and sealant workmanship including, cleaning, priming, joint opening preparation, and sealant installation.
      a. Include as part of program random adhesion and compatibility testing of production run products.
      b. Do not install sealant work prior to review of program.
      c. Submit quality assurance program to glass and sealant manufacturers for review and approval prior to submission to Architect.
1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

B. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.

C. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.

D. Source Limitations for Glass: Obtain ultraclear float glass, and coated float glass from single source from single manufacturer.

E. Source Limitations for Glass: Obtain laminated glass and insulating glass from single source from single manufacturer using primary glass obtained from a single source for each glass type.

F. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

G. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

H. Safety Glazing Labeling: Where safety glazing labeling is indicated, permanently mark glazing with certification label of the SGCC or the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
   1. All permanent marks and/or labels should be placed in the vicinity of the glass where the label is not obscured by the glass bite, gasket, sealant or other anchoring/glazing material. End text at least 3 mm from all site lines of the fenestration glazing to allow for readability.

I. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.

J. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Install glazing in mockups specified in Division 08 Sections for "Aluminum-Framed Entrances and Storefronts," "Aluminum Windows," and "Glazed Curtain Walls" to match glazing systems required for Project, including glazing methods.
   2. Approved sample installation may become part of the completed Work if undisturbed at time of Substantial Completion.
   3. Place mockup where reflection from adjacent buildings or other structures with a regular pattern can be used to gauge overall appearance / distortion of the glass.
1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.9 PROJECT CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F. Do not install sealants to wet or frost covered surfaces.

1.10 WARRANTY

A. General: During the warranty period, restore defective Work to the standard of the Contract Documents, including all labor, materials, refinishing and other costs incidental to the Work. Restore Work found to be defective as defined in the Contract Documents.

B. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Includes but not limited to fused ceramic spandrel, low-emissivity, and reflective glass.
2. Warranty Period: 10 years from date of Substantial Completion.

C. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Includes but not limited to opacified spandrel glass.
2. Warranty Period: 10 years from date of Substantial Completion.

D. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.
E. Installation: Glazing systems installation shall be warranted for a period of 5 years against defective materials and workmanship.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

A. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.
   1. Minimum Glass Thickness for Exterior Lites: Not less than [6.0] <Insert thickness designation> mm.

B. Strength: Where float glass is indicated, provide Kind HS heat-treated float glass. For life safety or fire knock-out panel considerations, where fully tempered glass is indicated, provide Kind FT heat-treated fully tempered float glass.

C. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
   1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
   2. For laminated-glass lites, properties are based on products of construction indicated.
   3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
   4. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F.
   5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
   6. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

D. Safety Glass
   1. CPSC 16 CFR part 1201, testing requirements of ANSI Z97.1, and listed in the SGCC Certified Products Directory with appropriate SGCC certification mark or label permanently affixed.
   2. Furnish safety glass for glass occurring in doors and sidelights, and where indicated and further required by authorities having jurisdiction.

2.2 GLASS PRODUCTS

A. Ultraclear Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I, complying with other requirements specified and with visible light transmission not less than 91 percent and solar heat gain coefficient not less than 0.87; heat-treated as described below.
   1. Products: Subject to compliance with requirements, provide one of the following:
      b. Pilkington North America; Optiwhite.
      c. PPG Industries, Inc.; Starphire.

B. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
2. For uncoated glass, comply with requirements for Condition A.
3. For coated vision glass, comply with requirements for Condition C (other coated glass).
4. Limit Kind HS surface compression to upper end of ASTM C 1048 range, 7,500 psi.
5. Distortion Tolerances:
   a. Roller Wave: Maximum 0.003 inch (0.076mm) from peak to valley within the main body of the sheet and maximum 0.008 inch (0.20mm) within 10.5 inches of a leading or trailing edge.
   b. Localized Warp: Maximum 0.03 inch (0.80mm) over any 12 inch (305mm) span, but limited to 0.31 inch (8.00mm).

   2. Ceramic Coating Color and Pattern: As selected by Architect from manufacturer's full range.

D. Mirror: Refer to Section 088300 "Mirrors."

E. Fire-Resistant Glazing: Refer to Section 088813 "Fire-Resistant Glazing and Framing."

2.3 LAMINATED GLASS

   A. Laminated Glass: ASTM C 1172, and complying with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
      1. Construction: Laminate glass with SentryGlas polymer interlayer as indicated to comply with interlayer manufacturer's written recommendations.
      2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
      3. Interlayer Color: Clear and translucent pattern where indicated.
         a. Translucent Pattern: As selected by Architect.

   B. Glass: Comply with applicable requirements in "Glass Products" Article as indicated by designations in "Laminated-Glass Types" Article.

2.4 INSULATING GLASS

   A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190, and complying with other requirements specified.
      1. Listed in the IGCC/IGMA Certified Products Directory with appropriate Certification mark on the spacer or at least one pane of unit.
      2. Sealing System: Dual seal, with manufacturer's standard primary and secondary, and with soldered, welded, and/or bent spacer corner construction.
         a. Units for structural sealant glazing: dual seal construction of a polyisobutylene primary seal and silicone secondary seal, and with soldered, welded, and/or bent spacer corner construction.
3. Spacer: Manufacturer’s standard thermally-broken spacer material and construction.
4. Desiccant: Molecular sieve or silica gel, or blend of both.
5. Units which will be shipped through or glazed at altitudes of 1520 meters (5000 feet) or more above sea level, fabricated with breather or capillary tubes, to permit air space pressure equalization. Provide same warranty as for non-breather or capillary tube units. Pinch tubes during glazing if required by glass manufacturer.

B. Glass: Comply with applicable requirements in "Glass Products" Article as indicated by designations in "Insulating-Glass Types" Article.

2.5 GLAZING GASKETS

A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, compatible with glazing sealants, and made from one of the following:
   1. EPDM complying with ASTM C 864.
   2. Silicone complying with ASTM C 1115.
   3. Thermoplastic polyolefin rubber complying with ASTM C 1115.
   4. Compression wedge for dry glazing system: of shape and size to compress the exterior compression gasket a minimum of 25 percent, and as recommended by glazing and sealing systems manufacturer.

B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned EPDM, silicone or thermoplastic polyolefin rubber gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.
   1. Bed gasket for wet glazing system: continuous with pressure sensitive adhesive 1 side, designed to be compressed 25-40 percent in the opening.
   2. Compression gasket for dry glazing system: shape as required to be compressed in place a minimum of 25 percent and of one-piece construction with factory-assembled frames with injection-molded, vulcanized corners; produced oversize in opening dimension, as determined by measurements, to insure compression at corners but within limits so that compression does not create a "pucker".
   3. Channel gasket: continuous channel of shape and dimensions for application in the opening with specified glazing.

2.6 GLAZING SEALANTS

A. General:
   1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
   2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
   3. VOC Content: For sealants used inside of the weatherproofing system, not more than 250 g/L when calculated according to 40 CFR 59, Subpart D.
   4. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.
1. **Products:** Subject to compliance with requirements, provide one of the following:
   a. Dow Corning Corporation; 790.
   b. GE Advanced Materials - Silicones; SilPruf LM SCS2700.
   d. Sika Corporation, Construction Products Division; SikaSil-C990.
   e. Tremco Incorporated; Spectrem 1.

C. **Glazing Sealant:** Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 50, Use NT.
   1. **Products:** Subject to compliance with requirements, provide one of the following:
      a. Dow Corning Corporation; 791 or 795.
      b. GE Advanced Materials - Silicones; SilGlaze II SCS2800.
      d. Sika Corporation, Construction Products Division; SikaSil-C995.
      e. Tremco Incorporated; Spectrem 2 or Spectrem 3.

D. See Division 8 STRUCTURAL-SEALANT-GLAZED CURTAIN WALLS for information on structural sealant.

2.7 **MISCELLANEOUS GLAZING MATERIALS**

A. **General:** Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. **Cleaners, Primers, and Sealers:** Types recommended by sealant or gasket manufacturer.

C. **Setting Blocks:** Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
   1. Each block shall be properly sized for load, as wide or wider than glazing, no less than 4 inches long; profile to permit friction fit, dart insertion into metal chair, or pressure sensitive adhesive one side to fix block in glazing opening.

D. **Spacers:** Elastomeric blocks or continuous extrusions of 40 to 60 Shore "A" durometer hardness to maintain glass lites in place for installation indicated.
   1. Profile to permit friction fit, dart insertion or pressure sensitive adhesive one side to fix shim or spacer in location.

E. **Edge Blocks:** Elastomeric material of 40 to 60 Shore "A" durometer hardness to limit glass lateral movement (side walking).
   1. Each block shall be a minimum 4 inches long, as wide as glazing, placed in the vertical glazing channel, and sized to allow a nominal 1/8-inch clearance between glass edge and installed block; profile to permit friction fit or pressure sensitive adhesive one side to fix block in glazing opening.

F. **Cylindrical Glazing Sealant Backing:** ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

G. **Open Cell Filter**
1. Reticulated flexible polyester urethane foam having 20 pores per inch, sized at least 25 mm (1 inch) larger in dimension than weep hole, of cross section to provide 15 to 25 percent compression for friction fit and as manufactured by Foam Division, Scott Paper Co.; H-O Products Corp.; or as approved.

H. Bond Breaker
1. Heavy duty, 0.28-mm (11-mil) minimum thickness, colored, polyethylene or teflon, self-adhesive bond breaker of type recommended by sealant manufacturer and suitable for conditions of usage. Liquid bond breaker is not permitted.

2.8 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.

C. Grind smooth and polish exposed glass edges and corners.

2.9 LAMINATED-GLASS TYPES

A. Glass Type IGL-1T: Clear laminated glass with two plies of ultraclear fully tempered float glass.
   1. Thickness of Each Glass Ply: 6.0 mm.
   2. Interlayer Thickness and Type: 0.060 inch PVB clear.
   3. Provide safety glazing labeling.

B. Glass Type IGL-2T: Clear laminated glass with two plies of ultraclear fully tempered float glass with full patterned interlayer.
   1. Thickness of Each Glass Ply: 6.0 mm.
   2. Interlayer Thickness and Type: 0.030 inch PVB decorative translucent pattern.
      a. Color and Opacity: As indicated on Drawings.
   3. Provide safety glazing labeling.

C. Glass Type IGL-3T: Clear laminated glass with two plies of ultraclear fully tempered float glass with patterned interlayer.
   1. Thickness of Each Glass Ply: 6.0 mm.
   2. Interlayer Thickness and Type: 0.030 inch PVB decorative clear and translucent spliced pattern as shown.
      a. Color and Opacity: As indicated on Drawings.
   3. Provide safety glazing labeling.

2.10 INSULATING-GLASS TYPES

A. Glass Type EGL-1: Low-e-coated, clear insulating glass.
1. Overall Unit Thickness: 1 inch.
2. Thickness of Each Glass Lite: 6.0 mm.
4. Interspace Content: Argon.
5. Indoor Lite: Heat-strengthened float glass.
7. Basis-of-Design Product: Vitro Solarban 70XL

B. Glass Type EGL-1T: Low-e-coated, clear insulating safety glass.
1. Overall Unit Thickness: 1 inch.
2. Thickness of Each Glass Lite: 6.0 mm.
3. Outdoor Lite: Fully tempered float glass.
4. Interspace Content: Argon.
5. Indoor Lite: Fully tempered float glass.
7. Provide safety glazing labeling.
8. Basis-of-Design Product: Vitro Solarban 70XL, Tempered

C. Glass Type EGL-2: Low-e-coated, ultraclear insulating glass.
1. Overall Unit Thickness: 1 inch.
2. Thickness of Each Glass Lite: 6.0 mm.
4. Interspace Content: Air.
5. Indoor Lite: Ultraclear fully tempered float glass.
7. Basis-of-Design Product: Vitro Solarban 90

D. Glass Type EGL-2S: Low-e-coated, ultraclear insulating glass.
1. Overall Unit Thickness: 1 inch.
2. Thickness of Each Glass Lite: 6.0 mm.
4. Interspace Content: Air.
5. Indoor Lite: Ultraclear fully tempered float glass.
7. Basis-of-Design Product: Vitro Solarban 90 Shadow Box

E. Glass Type EGL-2T: Low-e-coated, ultraclear insulating safety glass.
1. Overall Unit Thickness: 1 inch.
2. Thickness of Each Glass Lite: 6.0 mm.
3. Outdoor Lite: Ultraclear fully tempered float glass.
4. Interspace Content: Air.
5. Indoor Lite: Ultraclear fully tempered float glass.
7. Provide safety glazing labeling.
8. Basis-of-Design Product: Vitro Solarban 90, Tempered

F. Glass Type EGL-3T: Ceramic-coated, low-e, insulating safety glass.
1. Overall Unit Thickness: 1 inch.
2. Thickness of Each Glass Lite: 6.0 mm.
3. Outdoor Lite: Fully tempered float glass.
4. Interspace Content: Air.
5. Indoor Lite: Ultraclear fully tempered float glass.
7. Coating Location: Third surface.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
   1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
   2. Presence and functioning of weep systems.
   3. Minimum required face and edge clearances.
   4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
   1. Ensure approved Quality Assurance Program is implemented.

B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
1. Locate one quarter of glass width from each corner, but with block edge nearest corner no closer than 150 mm (6 inches) from corner, unless otherwise specified or required by glass manufacturer.

2. Insulating glass used in sloped glazing shall have both panes supported by setting blocks.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches.
   1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
   2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 GASKET GLAZING (DRY)

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
E. Install gaskets so they protrude past face of glazing stops.

3.5 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.6 CLEANING AND PROTECTION

A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.

C. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

D. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION
SECTION 088300 - MIRRORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes the following types of silvered flat glass mirrors:
   1. Tempered glass mirrors qualifying as safety glazing.

B. Related Requirements:
   1. Section 088000 "Glazing" for glass with reflective coatings used for vision and spandrel lites.
   2. Section 102800 "Toilet, Bath, and Laundry Accessories" for metal-framed mirrors.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Mirrors. Include description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality-control provisions.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachment details.

D. Samples: For each type of the following:
   1. Mirrors: 12 inches square, including edge treatment on two adjoining edges.

1.4 QUALITY ASSURANCE

A. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Product Certificates: For each type of mirror and mirror mastic.
   3. Preconstruction Test Reports: From mirror manufacturer indicating that mirror mastic was tested for compatibility and adhesion with mirror backing and substrates on which mirrors are installed.
1.5 PRECONSTRUCTION TESTING

A. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing.
   1. Testing is not required if data are submitted based on previous testing of mirror mastic products and mirror backing matching those submitted.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect mirrors according to mirror manufacturer's written instructions and as needed to prevent damage to mirrors from moisture, condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not install mirrors until ambient temperature and humidity conditions are maintained at levels indicated for final occupancy.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.
   1. Warranty Period: Five years from date of [Substantial Completion] [manufacture].

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Mirrors: Obtain mirrors from single source from single manufacturer.

B. Source Limitations for Mirror Accessories: Obtain mirror glazing accessories from single source.

2.2 SILVERED FLAT GLASS MIRRORS

A. Mirrors, General: ASTM C 1503; manufactured using copper-free, low-lead mirror coating process.

B. Tempered Glass Mirrors: Mirror Glazing Quality for blemish requirements and complying with ASTM C 1048 for Kind FT, Condition A, tempered float glass before silver coating is applied; clear.
1. Nominal Thickness: 6.0 mm.

C. Safety Glazing Products: For tempered mirrors, provide products that comply with 16 CFR 1201, Category II.

2.3 MISCELLANEOUS MATERIALS

A. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

B. Edge Sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.

C. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors and certified by both mirror and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Franklin International.
   b. Laurence, C. R. Co., Inc.
   c. Liquid Nails Adhesive.
   d. Palmer Products Corporation.
   e. Royal Adhesives & Sealants, LLC.

2. Adhesive shall have a VOC content of 70 g/L or less.

2.4 MIRROR HARDWARE

A. Aluminum J-Channels and Cleat: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover edges of mirrors in a single piece.

1. Bottom Trim: J-channels formed with front leg and back leg not less than 5/16 and 3/4 inch in height, respectively.
2. Top Trim: Formed with front leg with a height matching bottom trim and back leg designed to fit into the pocket created by wall-mounted aluminum cleat.

B. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.

C. Anchors and Inserts: Provide devices as required for mirror hardware installation. Provide toothed or lead-shield, expansion-bolt devices for drilled-in-place anchors. Provide galvanized anchors and inserts for applications on inside face of exterior walls and where indicated.

2.5 FABRICATION

A. Fabricate mirrors in the shop to greatest extent possible.

B. Fabricate cutouts for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrors.
C. Mirror Edge Treatment: Flat polished.
   1. Seal edges of mirrors with edge sealer after edge treatment to prevent chemical or atmospheric penetration of glass coating.
   2. Require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.

B. Verify compatibility with and suitability of substrates, including compatibility of existing finishes or primers with mirror mastic.

C. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 PREPARATION

A. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating substrates with mastic manufacturer's special bond coating where applicable.

3.3 INSTALLATION

A. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced GANA publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.

B. Provide a minimum airspace of 1/8 inch between back of mirrors and mounting surface for air circulation between back of mirrors and face of mounting surface.

C. Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.
   1. Aluminum J-Channels and Cleat: Fasten J-channel directly to wall and attach top trim to continuous cleat fastened directly to wall.
   2. Install mastic as follows:
      a. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.
3.4 CLEANING AND PROTECTION

A. Protect mirrors from breakage and contaminating substances resulting from construction operations.

B. Do not permit edges of mirrors to be exposed to standing water.

C. Maintain environmental conditions that prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.

D. Clean exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Clean mirrors as recommended in writing by mirror manufacturer.

END OF SECTION
SECTION 088813 - FIRE-RESISTANT GLAZING AND FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Fire-resistance-rated glazing and interior aluminum fire-rated frames.

1.3 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.

1.4 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings:
   1. Include plans, elevations and details of fire-rated framing product showing component dimensions; framing opening requirements, dimensions, tolerances, and attachment to structure

D. Glass Samples: For each type of glass product; 12 inches square.

E. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.
B. Testing Agency Qualifications: Qualifications according to
   1. International Accreditation Service for a Type A Third-Party Inspection Body (Field Services ICC-ES Third-Party Inspections Standard Operating Procedures, 00-BL-S0400 and S0401)
   2. International Accreditation Service for Testing Body-Building Materials and Systems
      a. Fire Testing
         1) ASTM Standards E 119
         2) CPSC Standards 16 CFR 1201
         3) NFPA Standards 251, 252, 257
         4) UL Standards 9, 10B, 10C, 1784, UL Subject 63

C. Fire-Rated Wall Assemblies: Assemblies complying with ASTM E119 that are classified and labeled by UL, for fire ratings indicated, based on testing in accordance with UL 263, ASTM E119.

D. Listings and Labels - Fire Rated Assemblies: Under current follow-up service by Underwriters Laboratories (ULI) maintaining a current listing or certification. Label assemblies accordance with limits of manufacturer's listing.

E. Provide the following upon request:
   1. Qualification Data: For installers.
   2. Product Certificates: For each type of glass and glazing product, from manufacturer.
   3. Test reports for fire-rating listing of glass, frame, and wall assemblies.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install fire-resistant glazing until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature conditions at occupancy levels during the remainder of the construction period.

1.9 WARRANTY

A. Manufacturer's Special Warranty on Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
   1. Warranty Period: Five years from date of Substantial Completion.
PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Glass and Framing: Obtain glass and framing from single source.

B. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

2.2 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; deterioration of glazing materials; or other defects in construction.

B. Delegated design: For the performance requirements listed below requiring structural design provide data, calculations and drawings signed and sealed by an engineer licensed in the state where the project is located.

C. System Description:
   1. Steel fire-rated glazed wall and/or window system, dual aluminum cover cap format
   2. Face width: 2-inch:
   3. Custom extruded aluminum cover caps
   4. Duration - Walls: Capable of providing a fire rating for 120 minutes.

D. Member deflection is referenced from the IBC Section 24 General Requirements for Glass, article 2403.3.

E. Design Requirements
   1. Design and size the system to withstand structural forces placed upon it without damage or permanent set when tested in accordance with ASTM E330 using load 1.5 times the design loads and of 10 seconds in duration at +/- 10 PSF.

2.3 GLASS PRODUCTS, GENERAL

A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organization below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

B. Safety Glazing Labeling: Permanently mark glazing with certification label of the Safety Glazing Certification Council or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, glass thickness, and safety glazing standard with which glass complies.
2.4 FIRE-RESISTANCE-RATED GLAZING AND FRAMING

A. Fire-Resistance-Rated Glazing: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-resistance ratings indicated, based on testing according to ASTM E 119 or UL 263.

1. Fire-Resistance-Rated Glazing Labeling: Permanently mark fire-resistance-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, that the glazing is approved for use in walls, and the fire-resistance rating in minutes.

B. Laminated Glass with Intumescent Interlayers, Type IGL-4: Low-iron clear laminated glass made from multiple plies of uncoated, ultraclear float glass; with intumescent interlayers; and complying with 16 CFR 1201, Category II.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Pilkington Pyrostop No 60-201 fire-rated butt glazing as manufactured by Pilkington Group and distributed by Technical Glass Products, or comparable by one of the following:
   a. InterEdge Technologies by AGC Flat Glass; Pyrobel.
   b. Vetrotech Saint-Gobain; SGG Contraflam.

2. Properties:
   a. Fire Rating: 60 minutes
   b. Nominal Thickness: 1-1/16-inch
   c. Weight: 12.9 psf
   d. U-Value: 0.83
   e. Daylight Transmission: 86 percent
   f. STC Rating: 44
   g. Vertical Butt Joint, Width: 5 mm (3/16-inch)

3. Label: Each piece of fire-rated glazing shall be labeled with a permanent logo including name of product, manufacture, testing laboratory (UL), fire rating period, safety glazing standards, and date of manufacture.

C. Frame System:

1. Basis-of-Design Products, Type IWS-3: Subject to compliance with requirements, provide Fireframes Clearview Series fire-rated butt-glazed frame system as manufactured and supplied by Technical Glass Products, or Architect approved equal.
   a. Material: Aluminum. Hollow metal steel is not acceptable.
   b. Frame system shall be same fire rating as glass and shall be a tested, listed, and labeled assembly.

2.5 GLAZING ACCESSORIES

A. Provide manufacturer's standard glazing gaskets, glazing sealants, glazing tapes, setting blocks, spacers, edge blocks, and other glazing accessories that are compatible with glazing products and each other and are approved by testing agencies that listed and labeled fire-resistant glazing products with which products are used for applications and fire-protection ratings indicated.

1. Glazing Tape: Closed cell polyvinyl chloride foam, coiled on release paper over adhesive on two sides, maximum water absorption by volume of 2 percent, designed for compression of 25 percent to effect an air and vapor seal.

2. Butt Glazing Silicone Sealant: For the butt glazing assembly, silicone sealant shall be applied to seal the butt joint. The sealant shall be provided by the glass manufacturer.
3. Butt Glazing Intumescent Strip: For the butt glazing assembly, 9/16 inch wide by 3/16 inch thick tape, shall be installed along the vertical edges of the sections of glass at the butt joint.
4. Setting Blocks: Hardwood or calcium silicate; glass width by 4 inches by 3/16 inch thick.
5. Spacers: Neoprene or other resilient blocks of 40 to 50 Shore A durometer hardness, adhesive-backed on one face only, tested for compatibility with specified glazing compound.

2.6 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

C. Cleaners, Primers, and Sealers: Type recommended by manufacturer of glass and gaskets.

D. Bituminous Paint: Cold-applied, asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos; formulated for 30-mil thickness per coat.

2.7 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

2.8 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.9 ALUMINUM FINISHES

A. Finish after fabrication.

B. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with manufacturing and installation tolerances, including those for size, squareness, and offsets at corners, and for compliance with minimum required face and edge clearances.

B. Examine substrates and members to which the work of this section attaches or adjoins prior to frame installation are acceptable for product installation in accordance with manufacturer's instructions. Provide openings plumb, square and within allowable tolerances. The manufacturer recommends 3/8 inch shim space at connection with perimeter walls.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

B. Examine glazing units to locate fire side and protected side. Label or mark units as needed so that fire side and protected side are readily identifiable. Do not use materials that leave visible marks in the completed work.

C. Examine framing components for dents, scratches, and other problems with framing or finish that may deter from finish product installation.

3.3 FRAMING INSTALLATION

A. Install framing in accordance with framing manufacturer’s written instructions to produce work meeting performance and workmanship requirements specified. Use methods approved by testing agencies that listed and labeled fire-resistant framing products.

3.4 GLAZING, GENERAL

A. Use methods approved by testing agencies that listed and labeled fire-resistant glazing products.

B. Comply with combined written instructions of manufacturers of glass, framing, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches.
   1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
   2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

I. Set glass lites with proper orientation so that coatings face fire side or protected side as specified.

J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

K. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.5 REPAIR AND TOUCH UP

A. Powder Coated Finishes
   1. Limited to minor repair of small scratches. Use only manufacturer’s recommended products.
   2. Such repairs shall match original finish for quality or material and view.
   3. Repairs and touch-up not visible from a distance of 5 feet Owner and Architect to approve.

B. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged.

3.6 CLEANING AND PROTECTION

A. Immediately after installation, remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
   1. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.
C. Remove and replace glass that is damaged during construction period.

D. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION
SECTION 089119 - FIXED LOUVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Fixed extruded-aluminum louvers.
   2. Blank-off panels for louvers

1.3 DEFINITIONS

A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.

B. Horizontal Louver: Louver with horizontal blades (i.e., the axis of the blades are horizontal).

C. Wind-Driven-Rain-Resistant Louver: Louver that provides specified wind-driven-rain performance, as determined by testing according to AMCA 500-L.

1.4 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 080413.

B. Product Data: For each type of product.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
   1. Show weep paths, gaskets, flashings, sealants, and other means of preventing water intrusion.
   2. Show mullion profiles and locations.

E. Samples: For each type of metal finish required.

F. Delegated-Design Submittal: For louvers indicated to comply with structural and seismic performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1.5 QUALITY ASSURANCE

A. Provide the following upon request:
   1. Product Test Reports: Based on evaluation of comprehensive tests performed according to AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.
   2. Welding certificates.

1.6 FIELD CONDITIONS

A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.7 WARRANTY

A. Special Finish Warranty: Manufacturer agrees to repair or replace components on which finishes fail in materials or workmanship within specified warranty period.
   1. Deterioration includes, but is not limited to, the following:
      a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
      b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
      c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
   2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain fixed louvers from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design louvers, including comprehensive engineering analysis by a qualified professional engineer, using structural and seismic performance requirements and design criteria indicated.

B. Structural Performance: Louvers shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.
   1. Wind Loads: Determine loads based on pressures as indicated on Drawings.

C. Seismic Performance: Louvers, including attachments to other construction, shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
D. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width according to AMCA 500-L.

E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
   1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

2.3 FIXED EXTRUDED-ALUMINUM LOUVERS

A. Horizontal, Wind-Driven-Rain-Resistant Louver:
   1. Basis-of-Design Products: Subject to compliance with requirements, provide Model SCH601 as manufactured by Airolite Company, LLC (The), or comparable by one of the following:
      a. Construction Specialties, Inc.
      b. Greenheck Fan Corporation.
      c. Nystrom, Inc.
      d. Ruskin Company.
   2. Louver Depth: 6 inches.
   3. Frame and Blade Nominal Thickness: Not less than 0.080 inch.
   4. Louver Performance Ratings:
      a. Free Area: Not less than 7.0 sq. ft. for 48-inch- wide by 48-inch- high louver.
      b. Wind-Driven Rain Performance: Not less than 99 percent effectiveness when subjected to a rainfall rate of 8 inches per hour and a wind speed of 50 mph at a core-area air velocity of 600 fpm.
   5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

2.4 MATERIALS

A. Aluminum Extrusions: ASTM B 221, Alloy 6063-T5, T-52, or T6.

B. Aluminum Sheet: ASTM B 209, Alloy 3003 or 5005, with temper as required for forming, or as otherwise recommended by metal producer for required finish.

C. Fasteners: Use types and sizes to suit unit installation conditions.
   1. For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.
   2. For color-finished louvers, use fasteners with heads that match color of louvers.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

E. Recycled Content of Aluminum Components: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 50 percent.

F. Regional Materials: Products shall be manufactured within 100 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.
2.5  FABRICATION

A. Factory assemble louvers to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates.
   1. Continuous Vertical Assemblies: Fabricate units without interrupting blade-spacing pattern where indicated.
   2. Horizontal Mullions: Provide horizontal mullions at joints where indicated.

C. Maintain equal louver blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

D. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
   1. Frame Type: Interior flange unless otherwise indicated.

E. Include supports, anchorages, and accessories required for complete assembly.

F. Provide vertical mullions of type and at spacings indicated, but not more than is recommended by manufacturer, or 72 inches o.c., whichever is less.
   1. Fully Recessed Mullions: Provide Mullions fully recessed behind louver blades. Where length of louver exceeds fabrication and handling limitations, fabricate with close-fitting blade splices designed to permit expansion and contraction.
   2. Exterior Corners: Prefabricated corner units with mitered and welded blades and with fully recessed mullions at corners.

G. Provide subsills made of same material as louvers or extended sills for recessed louvers.

H. Join frame members to each other and to fixed louver blades with fillet welds concealed from view unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.6  ALUMINUM FINISHES

A. Finish louvers after assembly.

B. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   1. Color and Gloss: As selected by Architect from manufacturer's full range.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.3 INSTALLATION

A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.

B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.

C. Form closely fitted joints with exposed connections accurately located and secured.

D. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

E. Protect unpainted galvanized- and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.

F. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 079200 "Joint Sealants" for sealants applied during louver installation.

3.4 ADJUSTING AND CLEANING

A. Clean exposed louver surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.

B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.

C. Restore louvers damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.

1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.
END OF SECTION
SECTION 090413 - COMMON SUBMITTAL REQUIREMENTS FOR FINISHES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:
   1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.
   1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:
   1. Shop Drawings.
   2. Product Data.
   3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
   a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Refer to Section 01330 for quantity of days allowed for review.
2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER'S AND GENERAL CONTRACTOR'S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect's staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:

1. Action Codes Permitting Use:
   a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
   b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
   c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect's notations and Contract Document requirements.
d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.

2. Action Code Prohibiting Use:
   a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
   a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. Informational Submittals: For Architect's information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

1. Action Code for Information Only:
   a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned un-reviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.
   1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.
   1. Submittal Numbering: See below.
   2. Contact Information: Full Name, Phone Number and Email Address.

B. Submittal Definition
   1. Each submittal consists of items from only ONE Specifications section.
2. Complete Submittal: If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.

3. Partial Submittals: If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).

4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.

C. Submittal Numbering

1. Number submittals as described below to assist tracking.

2. Number each submittal in the format nnnnnn-nn.
   a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.
   b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.
   c. P-Number for Partial Submittals: Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.
   d. R-Number for Re-submittals: Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.
   e. Examples:

3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS

A. Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.

B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:
   1. Submittal Number: See Submittal Numbering in Submittal Transmittal Requirements paragraph.

D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION
SECTION 090561.13 - MOISTURE VAPOR EMISSION CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section includes fluid-applied, resin-based, membrane-forming systems that control the
      moisture-vapor-emission rate of high-moisture, interior concrete to prepare it for floor covering
      installation.

1.3 DEFINITIONS
   A. MVE: Moisture vapor emission.
   B. MVER: Moisture vapor emission rate.

1.4 ACTION SUBMITTALS
   A. Product Data: For each type of product.
   B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

1.5 INFORMATIONAL SUBMITTALS
   A. Certifications: Furnish written certification that the manufacturer has verified the compatibility
      between the vapor retarder provided and the flooring product scheduled to be applied, including
      adhesives and floor leveling materials.
   B. Flooring Manufacturer Acceptance of Vapor Retarder Application: Furnish a signed written
      statement obtained from flooring manufacturer, stating that the water vapor emission levels,
      after application of vapor retarders, are acceptable and suitable for their flooring application.

1.6 QUALITY ASSURANCE
   A. Manufacturer Qualifications: Employs factory-trained personnel who are available for
      consultation and Project-site inspection.
   B. Installer Qualifications: An authorized representative who is trained and approved by
      manufacturer.
   C. Provide the following upon request:
      1. Qualification Data: For Installer and manufacturer.
2. Product Test Reports: For each MVE-control system, for tests performed by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency.
3. Preinstallation testing reports.
4. Field quality-control reports.
5. Certification: From manufacturer that product is compatible with lightweight concrete.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating directions for storage and mixing with other components.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Comply with MVE-control system manufacturer's written instructions for substrate and ambient temperatures, humidity, ventilation, and other conditions affecting system installation.

1. Store system components in a temperature-controlled environment and protected from weather and at ambient temperature of not less than 65 deg F and not more than 85 deg F at least 48 hours before use.

2. Maintain ambient temperature and relative humidity in installation areas within range recommended in writing by MVE-control system manufacturer, but not less than 65 deg F or more than 85 deg F and not less than 40 or more than 60 percent relative humidity, for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.

3. Install MVE-control systems where concrete surface temperatures will remain a minimum of 5 deg F higher than the dew point for ambient temperature and relative humidity conditions in installation areas for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.

1.9 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer and Installer agree to repair or replace the applied concrete vapor retarder, the new floor covering or coating, including materials and labor for applied concrete vapor retarder that fails to remain adhered to the substrate or is affected by moisture or alkalinity within the specified warranty period. Manufacturer's warranty requires manufacturer's inspection and written authorization, prior to removal of existing floor covering and applied concrete vapor retarder.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
B. MVE-Control System Capabilities: Capable of suppressing MVE without failure where installed on concrete that exhibits the following conditions:
   1. MVER: Maximum 25 lb of water/1000 sq. ft. when tested according to ASTM F 1869.
   2. Relative Humidity: Maximum 100 percent when tested according to ASTM F 2170 using in situ probes.

C. Water-Vapor Transmission: Through MVE-control system, maximum 0.10 perm when tested according to ASTM E 96/E 96M.

D. Tensile Bond Strength: For MVE-control system, greater than 200 psi with failure in the concrete according to ASTM D 7234.

E. Product shall be compatible with lightweight concrete.

2.2 MVE-CONTROL SYSTEM

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Advanced Moisture Control, Inc.
   2. ARDEX Americas.
   3. Dependable, LLC.
   4. Floor Seal Technology, Inc.
   5. KOSTER American Corporation.
   6. MAPEI Corporation.
   7. Schonox HPS North America

B. MVE-Control System: ASTM F 3010-qualified, fluid-applied, two-component, epoxy-resin, membrane-forming system; formulated for application on concrete substrates to reduce MVER to level required for installation of floor coverings indicated and acceptable to manufacturers of floor covering products indicated, including adhesives.
   1. Substrate Primer: Provide MVE-control system manufacturer's concrete-substrate primer if required for system indicated by substrate conditions.
   2. Cementitious Underlayment Primer: If required for subsequent installation of cementitious underlayment products, provide MVE-control system manufacturer's primer to ensure adhesion of products to MVE-control system.
   3. Thickness: Minimum continuous layer thickness >11mils (0.011 in.)
      a. Include minimum thickness to include calculations for rough, absorptive, or porous concrete surfaces

2.3 ACCESSORIES

A. Patching and Leveling Material: Moisture-, mildew-, and alkali-resistant product recommended in writing by MVE-control system manufacturer and with minimum of 3000-psi compressive strength after 28 days when tested according to ASTM C 109/C 109M.

B. Crack-Filling Material: Resin-based material recommended in writing by MVE-control system manufacturer for sealing concrete substrate crack repair.

C. Cementitious Underlayment: If required to maintain manufacturer's warranty, provide MVE-control system manufacturer's hydraulic cement-based underlayment.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
   1. Installation of system indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Preinstallation Testing:
   1. Testing Agency: District will engage a qualified testing agency to perform tests.
   2. Alkalinity Testing: Perform pH testing according to ASTM F 710. Install MVE-control system in areas where pH readings are less than 7.0 Insert value and in areas where pH readings are greater than 8.5.
   3. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. 1000 sq. ft., and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
      a. Anhydrous Calcium Chloride Test: ASTM F 1869. Install MVE-control system in locations where concrete substrate MVER exceeds 3 lb of water/1000 sq. ft. in 24 hours.
      b. Internal Relative Humidity Test: Using in situ probes, ASTM F 2170. Install MVE-control system in locations where concrete substrates exhibit relative humidity level greater than 75 percent.
   4. Tensile-Bond-Strength Testing: For typical locations indicated to receive installation of MVE-control system, install minimum 100 sq. ft. area of MVE-control system to prepared concrete substrate and test according to ASTM D 7234.
      a. Proceed with installation only where tensile bond strength is greater than 200 psi with failure in the concrete.

B. Concrete Substrates: Prepare and clean substrates according to MVE-control system manufacturer's written instructions to ensure adhesion of system to concrete.
   1. Remove coatings and other substances that are incompatible with MVE-control system and that contain soap, wax, oil, or silicone, using mechanical methods recommended in writing by MVE-control system manufacturer. Do not use solvents.
   2. Provide concrete surface profile complying with ICRI 310.2R CSP 3 by shot blasting using apparatus that abrades the concrete surface with shot, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
   3. After shot blasting, repair damaged and deteriorated concrete according to MVE-control system manufacturer's written instructions.
   4. Protect substrate voids and joints to prevent resins from flowing into or leaking through them.
   5. Fill surface depressions and irregularities with patching and leveling material.
   6. Fill surface cracks, grooves, control joints, and other nonmoving joints with crack-filling material.
   7. Allow concrete to dry, undisturbed, for period recommended in writing by MVE-control system manufacturer after surface preparation, but not less than 24 hours.

C. Protect walls, floor openings, electrical openings, door frames, and other obstructions during installation.

3.3 INSTALLATION

A. General: Install MVE-control system according to ASTM F 3010 and manufacturer's written instructions to produce a uniform, monolithic surface free of surface deficiencies such as pin holes, fish eyes, and voids.
   1. Install primers as required to comply with manufacturer's written instructions.

B. Do not apply MVE-control system across substrate expansion, isolation, and other moving joints.

C. Apply system, including component coats if any, in thickness recommended in writing by MVE-control system manufacturer for MVER indicated by preinstallation testing.

D. Cure MVE-control system components according to manufacturer's written instructions. Prevent contamination or other damage during installation and curing processes.

E. After curing, examine MVE-control system for surface deficiencies. Repair surface deficiencies according to manufacturer's written instructions.

F. Install cementitious underlayment over cured membrane if required to maintain manufacturer's warranty and in thickness required to maintain the warranty.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: District will engage a qualified testing agency to perform installation inspections.

B. Installation Inspections: Inspect substrate preparation and installation of system components to ensure compliance with manufacturer's written instructions and to ensure that a complete MVE-control system is installed without deficiencies.
   1. Verify that surface preparation meets requirements.
   2. Verify that component coats and complete MVE-control-system film thicknesses comply with manufacturer's written instructions.
   3. Verify that MVE-control-system components and installation areas that evidence deficiencies are repaired according to manufacturer's written instructions.

C. MVE-control system will be considered defective if it does not pass inspections.

3.5 PROTECTION

A. Protect MVE-control system from damage, wear, dirt, dust, and other contaminants before floor covering installation. Use protective methods and materials, including temporary coverings, recommended in writing by MVE-control system manufacturer.

B. Do not allow subsequent preinstallation examination and testing for floor covering installation to damage, puncture, or otherwise compromise the MVE-control system membrane.
END OF SECTION
SECTION 092116.23 - GYPSUM BOARD SHAFT WALL ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes gypsum board shaft wall assemblies.

1.3 ACTION SUBMITTALS
A. Product Data: For each component of gypsum board shaft wall assembly.
B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

1.4 DELIVERY, STORAGE, AND HANDLING
A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and support them on risers on a flat platform to prevent sagging.

1.5 FIELD CONDITIONS
A. Environmental Limitations: Comply with gypsum-shaftliner-board manufacturer's written instructions.
B. Do not install finish panels until installation areas are enclosed and conditioned.
C. Do not install panels that are wet, moisture damaged, or mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS
A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
B. STC-Rated Assemblies: Provide materials and construction identical to those of assemblies tested according to ASTM E 90 and classified according to ASTM E 413 by a testing and inspecting agency.

C. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

D. Regional Materials: Products shall be manufactured within 100 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

2.2 GYPSUM BOARD SHAFT WALL ASSEMBLIES

A. Fire-Resistance Rating: As indicated.

B. STC Rating: 51, minimum.

C. Gypsum Shaftliner Board:
   1. Moisture- and Mold-Resistant, Fiberglass-Mat Faced: ASTM C 1658/C 1658M; manufacturer's proprietary fire-resistive liner panels with ASTM D 3273 mold-resistance score of 10 as rated according to ASTM D 3274, 1 inch thick, and with double beveled long edges.
      a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
         1) Georgia-Pacific Building Products; Dens-Glass Shaftliner.
         2) National Gypsum Company Gold Bond eXP Shaftliner.
         3) United States Gypsum Company; Sheetrock Glass-Mat Liner Panel.

D. Non-Load-Bearing Steel Framing, General: Complying with ASTM C 645 requirements for metal unless otherwise indicated and complying with requirements for fire-resistance-rated assembly indicated.

E. studs: Manufacturer's standard profile for repetitive, corner, and end members as follows:
   1. Depth: 6 inches.
   2. Minimum Base-Metal Thickness: As indicated.

F. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches long and matching studs in depth.
   1. Minimum Base-Metal Thickness: Matching steel studs.

G. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.

H. Elevator-Hoistway-Entrance Struts: Manufacturer's standard J-profile jamb strut with long-leg length of 3 inches, matching studs in depth, and not less than 0.033 inch thick.

I. Finish Panels: Gypsum board as specified in Section 092900 "Gypsum Board."
J. Sound Attenuation Blankets: As specified in Section 098100 "Acoustical Insulation."

2.3 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with shaft wall manufacturer's written instructions.

B. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in Section 092900 "Gypsum Board" that comply with gypsum board shaft wall assembly manufacturer's written instructions for application indicated.

C. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.

D. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
   1. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488/E 488M conducted by a qualified testing agency.
   2. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.

E. Reinforcing: Galvanized-steel reinforcing strips with 0.033-inch minimum thickness of base metal (uncoated).

F. Acoustical Sealant: Section 079200 "Joint Sealants."

G. Gypsum Board Cants:
   1. Gypsum Board Panels: As specified in Section 092900 "Gypsum Board," Type X, 1/2- or 5/8-inch panels.
   2. Adhesive: Laminating adhesive as specified in Section 092900 "Gypsum Board."
   3. Non-Load-Bearing Steel Framing: As specified in Section 092216 "Non-Structural Metal Framing."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 INSTALLATION

A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated and manufacturer's written installation instructions.

B. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.

C. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.
   1. Elevator Hoistway: At elevator hoistway-entrance door frames, provide jamb struts on each side of door frame.
   2. Reinforcing: Provide where items attach directly to shaft wall assembly as indicated on Drawings; accurately position and secure behind at least one layer of face panel.

D. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons and floor indicators, and similar items.

E. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels while maintaining continuity of fire-rated construction.

F. Firestop Tracks: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.

G. Control Joints: Install control joints according to ASTM C840, in specific locations approved by Architect and as follows, while maintaining fire-resistance rating of gypsum board shaft wall assemblies.
   1. Install at changes in backup material.
   2. Framed Openings:
      a. Doors: Install above both jambs unless indicated or directed otherwise.
      b. Glazed Openings: Install above and below both jambs unless indicated or directed otherwise.
   3. Install at other locations indicated on Drawings.

H. Sound-Rated Shaft Wall Assemblies: Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly.

I. Gypsum Board Cants: At projections into shaft [exceeding 4 inches] [where indicated], install gypsum board cants covering tops of projections.
   1. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 inches o.c. with screws fastened to shaft wall framing.
   2. Where non-load-bearing steel framing is required to support gypsum board cants, install framing at 24 inches o.c. and extend studs from the projection to shaft wall framing.

J. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.
3.3 PROTECTION

A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

B. Remove and replace panels that are wet, moisture damaged, or mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION
SECTION 092216 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Non-load-bearing steel framing systems for interior partitions.

B. Related Requirements:
   1. Section 054000 "Cold-Formed Metal Framing" for exterior and interior load-bearing and exterior non-load-bearing wall studs.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product, including manufacturer's height limitation tables.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

1.4 QUALITY ASSURANCE

A. Provide the following upon request:
   1. Product Certificates: For each type of code-compliance certification for studs and tracks.
   2. Evaluation Reports: For embossed steel studs and tracks, firestop tracks, post-installed anchors, and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction
   3. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association, the Steel Framing Industry Association, or the Steel Stud Manufacturers Association.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 119 by an independent testing agency.
B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated on Drawings, according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

C. Horizontal Deflection: Refer to manufacturer’s standard height limitation tables based on the following deflection criteria:
   1. For wall assemblies without cladding, limited to 1/240 of the wall height based on horizontal loading of 5 lbf/sq. ft..
   2. For wall assemblies with cladding or tiling, limited to 1/360 of the wall height based on horizontal loading of 10 lbf/sq. ft..

2.2 FRAMING SYSTEMS

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
   1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal unless otherwise indicated.

C. Studs and Tracks: ASTM C 645. Use either steel studs and tracks or embossed steel studs and tracks.
   1. Conventional Steel Studs and Tracks:
      a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
         1) CEMCO; California Expanded Metal Products Co.
         2) ClarkDietrich Building Systems.
         3) Steel Network, Inc. (The).
      b. Minimum Base-Metal Thickness: Sized according to manufacturer’s published height limitation tables based on horizontal deflection performance requirements indicated.
      c. Depth: As indicated on Drawings.
   2. Embossed Steel Studs and Tracks: Roll-formed and embossed with surface deformations to stiffen the framing members so that they are structurally equivalent to conventional ASTM C 645 steel studs and tracks.
      a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
         1) CEMCO; California Expanded Metal Products Co.
         2) ClarkDietrich Building Systems.
         3) Steel Network, Inc. (The).
      b. Minimum Base-Metal Thickness: Sized according to manufacturer’s published height limitation tables based on horizontal deflection performance requirements indicated.
      c. Depth: As indicated on Drawings.
D. Slip-Type Head Joints: Where indicated, provide one of the following:

1. Clip System: Clips designed for use in head-of-wall deflection conditions that provide a positive attachment of studs to tracks while allowing 1-1/2-inch minimum vertical movement.
   a. Products: Subject to compliance with requirements, provide one of the following as provided by steel stud manufacturer:
      1) CEMCO; California Expanded Metal Products Co.; Deflex Clips.
      2) ClarkDietrich Building Systems; FTC3.
      3) Steel Network, Inc. (The); VertiClip SLD Series.

2. Single Long-Leg Track System: ASTM C 645 top track with 2-inch- deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top track and with continuous bridging located within 12 inches of the top of studs to provide lateral bracing.

3. Double-Track System: ASTM C 645 top outer tracks, inside track with 2-inch- deep flanges in thickness not less than indicated for studs and fastened to studs, and outer track sized to friction-fit over inner track.

4. Deflection Track: Steel sheet top track manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
   a. Products: available products that may be incorporated into the Work include, but are not limited to, the following:
      1) BlazeFrame Industries; Bare Slotted Track (BST/BST 2).
      2) CEMCO; California Expanded Metal Products Co.; CST Slotted Deflection Track or SLP-TRK Slotted Deflection Track.
      3) ClarkDietrich Building Systems; SLP-TRK Slotted Deflection Track.
      4) Steel Network, Inc. (The); VertiClip SLD or VertiTrack VTD.

E. Firestop Tracks: Top track manufactured to allow partition heads to expand and contract with movement of structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.

1. Products: Subject to compliance with requirements, provide one of the following:
   a. BlazeFrame Industries; Intumescent Framing, Fire Stop System.
   b. CEMCO; California Expanded Metal Products Co.; FAS Track.
   c. ClarkDietrich Building Systems; BlazeFrame.
   d. FireTrak Corp; FireTrak System attached to studs with FireTrak Posi Klip.

F. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.

1. Minimum Base-Metal Thickness: As indicated, but not less than 0.0329 inch to support equipment indicated.

G. Cold-Rolled Channel Bridging: Steel, 0.0538-inch minimum base-metal thickness, with minimum 1/2-inch- wide flanges.

1. Depth: As indicated on Drawings.
2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches, 0.068-inch- thick, galvanized steel.

H. Hat-Shaped, Rigid Furring Channels: ASTM C 645.

1. Minimum Base-Metal Thickness: As indicated, but not less than 0.0329 inch.
2. Depth: As indicated on Drawings.
I. Cold-Rolled Furring Channels: 0.053-inch uncoated-steel thickness, with minimum 1/2-inch-wide flanges.
   1. Depth: As indicated on Drawings.
   2. Furring Brackets: Adjustable, corrugated-edge-type steel sheet with minimum uncoated-steel thickness of 0.0329 inch.
   3. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.

J. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches, wall attachment flange of 7/8 inch, minimum uncoated-metal thickness of 0.0179 inch, and depth required to fit insulation thickness indicated.

2.3 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards.
   1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

B. Isolation Strip at Exterior Walls: Provide one of the following:
   2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.

C. Isolation Strip at Curtain Wall Mullion: Provide the following or Architect approved equal:
   1. Product: Mull It Over Products; 55 Classic Sound Barrier Mullion Trim Cap

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
   1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.
3.3 INSTALLATION, GENERAL

A. Installation Standard: ASTM C 754. Install according to Drawings and manufacturer's published height limitation tables.
   1. Gypsum Board Assemblies: Also comply with requirements in ASTM C 840 that apply to framing installation.

B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.

C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.

D. Install bracing at terminations in assemblies.

E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.4 INSTALLING FRAMED ASSEMBLIES

A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
   1. Single-Layer Application: As required by horizontal deflection performance requirements, but not greater than 24 inches o.c., unless otherwise indicated.
   2. Multilayer Application: As required by horizontal deflection performance requirements, but not greater than 16 inches o.c., unless otherwise indicated.
   3. Tile Backing Panels: As required by horizontal deflection performance requirements, but not greater than 16 inches o.c., unless otherwise indicated.

B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.

C. Install studs so flanges within framing system point in same direction.

D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.
   1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
   2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.
      a. Install two studs at each jamb unless otherwise indicated.
      b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.
      c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
   3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
   a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.

5. Sound-Rated Partitions: Install framing and acoustical joint sealant to comply with sound-rated assembly indicated.
   a. Install isolation strip assembly at end of wall against perimeter wall or curtain wall mullion.

E. Direct Furring:
   1. Attach to concrete with stub nails or powder-driven fasteners spaced 24 inches o.c.

F. Z-Shaped Furring Members:
   1. Erect insulation, specified in Section 072100 "Thermal Insulation," vertically and hold in place with Z-shaped furring members spaced o.c.
   2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.
   3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.

G. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

END OF SECTION
SECTION 092400 - CEMENT PLASTERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Exterior vertical plasterwork (stucco).
   2. Exterior horizontal and nonvertical plasterwork (stucco).

B. Related Requirements:
   1. Section [061600 "Sheathing"] [061643 "Gypsum Sheathing"] for exterior wall sheathings and wall sheathing joint-and-penetration treatments.
   2. Section 072100 "Thermal Insulation" for insulation board used as part of an approved NFPA 285 compliant wall assembly.
   3. Section 072726 "Membrane Air Barriers" for sheet membrane water-resistive air barrier used as part of an approved NFPA 285 compliant plaster wall assembly.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Show locations and installation of control and expansion joints, including plans, elevations, sections, details of components, and attachments to other work.

D. Samples for Initial Selection: For each type of factory-prepared finish coat for each color and each texture available. Manufacturer's standard sizes for color and texture samples.

E. Samples for Verification: For factory-prepared finish coat colors and textures selected, 12 by 12 inches, and prepared on rigid backing.

1.4 INFORMATIONAL SUBMITTALS

A. Certification: Manufacturer's certificate of compliance with NFPA 285 for each component.

B. Test Reports: Test reports indicating approval of each product as part of an NFPA 285 compliant assembly.
1.5 QUALITY ASSURANCE

A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
   1. Include mockup in standalone exterior wall mockup.
   2. Build mockups for each substrate, color, and finish texture indicated for cement plastering, including accessories.
      a. Size: 100 sq. ft. in surface area.
   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store materials inside under cover, and keep them dry and protected against damage from weather, moisture, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.

1.7 FIELD CONDITIONS

A. Comply with ASTM C 926 requirements.

B. Exterior Plasterwork:
   1. Apply and cure plaster to prevent plaster drying out during curing period. Use procedures required by climatic conditions, including moist curing, providing coverings, and providing barriers to deflect sunlight and wind.
   2. Apply plaster when ambient temperature is greater than 40 deg F.
   3. Protect plaster coats from freezing for not less than 48 hours after set of plaster coat has occurred.

C. Interior Plasterwork: Maintain room temperatures at greater than 40 deg F for at least 48 hours before plaster application, and continuously during and after application.
   1. Avoid conditions that result in plaster drying out during curing period. Distribute heat evenly; prevent concentrated or uneven heat on plaster.
   2. Ventilate building spaces as required to remove water in excess of that required for hydrating plaster in a manner that prevents drafts of air from contacting surfaces during plaster application and until plaster is dry.

D. Factory-Prepared Finishes: Comply with manufacturer's written recommendations for environmental conditions for applying finishes.
PART 2 - PRODUCTS

2.1 FIRE PERFORMANCE REQUIREMENTS

A. Fire Propagation Characteristics: Cement plaster, lath, and associated components shall have passed NFPA 285 testing as part of an approved assembly. Substitution of listed products, if approved by Architect as an equal, shall be with comparable products meeting same fire propagation requirements as a component in a listed assembly tested and approved by Underwriter Laboratories, Inc. or another third party testing agency acceptable to the governing authority. Engineering Judgments prepared by the manufacturer shall be preapproved by the authority having jurisdiction.

B. It is not the intention to preclude the use of other comparable products as approved by the Architect, as long as the product meets the criteria and complies with NFPA 285 as part of an approved assembly. Substitution requests shall include certification and technical data from the manufacturer indicating that the product has been tested and approved in a listed assembly. Components of an approved NFPA 285-compliant air-barrier assembly include the following:

1. Plaster Assembly: Water-resistive-barrier on exterior glass-mat-faced sheathing on metal studs, with extruded or expanded polystyrene insulation drainage board, metal lath and minimum 3/4 inch thick cement plaster, similar or equal to UL EWS0027, EWS0030, or EWS0025. Other manufacturer's may have similar testing available.

C. Fire-Resistance Ratings: Where indicated, provide cement plaster assemblies identical to those of assemblies tested for fire resistance according to ASTM E 119 by a qualified testing agency.

2.2 METAL LATH

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. CEMCO; California Expanded Metal Products Co.
   b. ClarkDietrich Building Systems.
   c. MarinoWARE.
   d. Phillips Manufacturing Co.

2. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

3. Diamond-Mesh Lath: Flat or self-furring as indicated or to suit conditions, 3.4 lb/sq. yd..

4. Flat-Rib Lath: Rib depth of not more than 1/8 inch, 3.4 lb/sq. yd..

5. 3/8-inch (10-mm) rib lath is often used where its rigidity is necessary for long spans.

B. Paper Backing: FS UU-B-790a, Type I, Grade D, Style 2 vapor-permeable paper.

1. Provide paper-backed lath at exterior locations indicated, unless otherwise indicated.

2.3 ACCESSORIES

A. General: Comply with ASTM C 1063, and coordinate depth of trim and accessories with thicknesses and number of plaster coats required. Accessories shall be noncombustible.
B. Metal Accessories:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. CEMCO; California Expanded Metal Products Co.
   b. ClarkDietrich Building Systems.
   c. MarinoWARE.
   d. Stockton Products.

5. Casing Beads: Fabricated from zinc; square-edged style; with expanded flanges.
   a. Type 1: Stockton Products; Model J-B Modified, J-bead 5 inches tall by 2-7/8 inches wide with 1/4 inch upturned leg. Provide weep holes in horizontal beads.
   b. Type 2: Stockton Products; Model JCB Modified, J-Caulking Bead 5 inches tall by 2-7/8 inches wide with 1 inch upturned leg. Provide weep holes in horizontal beads.

6. Control Joints, Type Control Joint 1: Fabricated from zinc; one-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.

7. Two-Piece Expansion Joints, Type Expansion Joint 1: Fabricated from zinc; formed to produce slip-joint and M-shaped reveal that is adjustable up to 3/4 inch wide; with perforated flanges.
   a. Basis-of-Design Product: Stockton Products; Model MSX M-Slide Expansion Joint, or Architect approved equal by listed manufacturer.

C. Aluminum Trim:

1. Basis-of-Design Product: Subject to compliance with requirements, provide listed product by Fry Reglet Corp., or comparable product by one of the following:
   a. Flannery, Inc.
   b. Stockton Products

2. Vented Metal Soffit Trim: Extruded aluminum ventilation screed for 3/4-inch ground, prime painted finish.

   a. Basis-of-Design Product: Fry Reglet Corp.; PCS-75-100 2-PC, or Architect approved equal by listed manufacturer.

   a. Basis-of-Design Product: Fry Reglet Corp.; PCS-75-100, or Architect approved equal by listed manufacturer.
2.4 MISCELLANEOUS MATERIALS

A. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.

B. Fiber for Base Coat: Alkaline-resistant glass or polypropylene fibers, 1/2 inch long, free of contaminants, manufactured for use in cement plaster.

C. Fasteners for Attaching Metal Lath to Substrates: ASTM C 1063; with 1-1/4 inch washers.

E. Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, not less than 0.0475-inch diameter unless otherwise indicated.

F. Weather-Resistive-Barrier (WRB): Bituminous self-adhering sheet air barrier complying with Section 072726 "Membrane Air Barriers" as part of NFPA 285 compliant assembly.

G. Rigid Insulation: Expanded polystyrene (XPS) complying with Section 072100 "Thermal Insulation" as part of NFPA 285 compliant assembly.

2.5 PLASTER MATERIALS

A. Portland Cement: ASTM C 150/C 150M, Type I.

B. Colorants for Job-Mixed Finish Coats: Colorfast mineral pigments that produce finish plaster color to match Architect's sample.

C. Lime: ASTM C 206, Type S; or ASTM C 207, Type S.

D. Sand Aggregate: ASTM C 897.

E. Pre-mixed Scratch and Brown Coat Base Coatings: Factory-mixed portland-cement mixture formulated as cement plaster base coats. Include manufacturer's recommended primers and anti-cracking fiberglass reinforcing mesh.
   1. Products: Subject to compliance with requirements, provide one of the following tested and approved systems as part of an NFPA 285 compliant assembly:
      a. Dryvit Systems, Inc.; Dryvit TAFS.
      b. Senergy, BASF Wall Systems, Inc.
      c. Sto Corp.; StoPowerwall
   2. Reinforcing Mesh: Manufacturer's alkali-resistant, fiber reinforcing mesh, medium- and high- impact resistant according to ASTM E 695; 4- and 12- oz per sq.yd. as indicated.

F. Acrylic-Based Finish Coatings: Factory-mixed acrylic-emulsion coating systems formulated with colorfast mineral pigments and fine aggregates; for use over cement plaster base coats as part of an NFPA 285 compliant assembly. Include manufacturer's recommended primers and sealing topcoats for acrylic-based finishes.
   1. Products: Subject to compliance with requirements, provide one of the following components tested in NFPA 285 compliant assembly:
a. Dryvit Systems, Inc.; Dryvit TAFS.
b. Senergy, BASF Wall Systems, Inc.; Senerflex.
c. Sto Corp.; StoPowerwall Finish.

2. Texture: As selected by Architect from manufacturer's available options.
3. Colors: Allow for two.
   a. ECP1: Color 1
   b. ECP2: Color 2

2.6 PLASTER MIXES
A. General: Provide premixed system as part of NFPA 285 compliant assembly or site-mixed system as follows.

B. Comply with ASTM C 926 for applications indicated.
   1. Fiber Content: Add fiber to job-mixed base-coat mixes after ingredients have mixed at least two minutes. Comply with fiber manufacturer's written instructions for fiber quantities in mixes, but do not exceed 1 lb of fiber/cu. yd. of cementitious materials.

C. Job-Mixed Base-Coat Mixes for Use over Metal Lath: Scratch and brown coats for three-coat plasterwork as follows:
   1. Portland Cement Mixes:
      a. Scratch Coat: For cementitious material, mix 1 part portland cement and 0 to 3/4 parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
      b. Brown Coat: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

D. Job-Mixed Finish-Coat Mixes:
   1. Portland Cement Mix: For cementitious materials, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 1-1/2 to 3 parts aggregate per part of cementitious material.

E. Factory-Prepared Mixes: For cement-based base coats and acrylic-based finish coatings, comply with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION
A. Protect adjacent work from soiling, spattering, moisture deterioration, and other harmful effects caused by plastering.
B. Prepare smooth, solid substrates for plaster according to ASTM C 926.

C. Install foam insulation board in vertical drainage ribbons of insulation adhesive to continuously coated fluid-applied weather-resistive barrier membrane on exterior sheathing. Allow to cure before proceeding in accordance with adhesive manufacturer’s instructions. Adhesive shall be compatible with fluid-applied air barrier.

D. Install layer of building paper over insulation prior to attaching metal lath.

3.3 INSTALLATION, GENERAL

A. Install complete wall system, including plaster and lath, insulation, weather-resistive-barrier, exterior sheathing over metal studs in accordance with a tested and approved NFPA 285 compliant assembly.

3.4 INSTALLING METAL LATH

A. Metal Lath: Install according to ASTM C 1063 through rigid board insulation and exterior sheathing into metal wall stud framing or blocking without damaging self-sealing properties of the weather-resistive-barrier. Do not back out fasteners.

1. Partition Framing and Vertical Furring over Continuous Insulation: Install flat-diamond-mesh lath over one layer building paper.

2. Flat-Ceiling and Horizontal Framing: Install flat-rib paper-backed lath over Continuous Insulation, unless otherwise indicated.

3.5 INSTALLING ACCESSORIES

A. Install according to ASTM C 1063 and at locations indicated on Drawings.

B. Reinforcement for External (Outside) Corners:

1. Install lath-type, external-corner reinforcement at exterior locations.

C. Control Joints: Locate as approved by Architect for visual effect and as follows:

1. As required to delineate plasterwork into areas (panels) of the following maximum sizes:
   a. Vertical Surfaces: 144 sq. ft.
   b. Horizontal and Other Nonvertical Surfaces: 100 sq. ft.

2. At distances between control joints of not greater than 18 feet o.c.

3. As required to delineate plasterwork into areas (panels) with length-to-width ratios of not greater than 2-1/2:1.

4. Where control joints occur in surface of construction directly behind plaster.

5. Where plasterwork areas change dimensions, to delineate rectangular-shaped areas (panels) and to relieve the stress that occurs at the corner formed by the dimension change.

D. Vented Metal Reveal Trim: Install vented reveal trim as indicated in exterior soffits. Provide concealed spline to maintain joints in alignment and to allow for thermal movement. Provide mitered corners at changes in direction. Locate joints at expansion joints in cement plaster.
3.6 PLASTER APPLICATION

A. General: Comply with ASTM C 926.
   1. Do not deviate more than plus or minus 1/4 inch in 10 feet from a true plane in finished plaster surfaces when measured by a 10-foot straightedge placed on surface.
   2. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.
   3. Provide plaster surfaces that are ready to receive field-applied finishes indicated.

B. Walls; Mixes for use over metal lath over building paper having 7/8-inch total thickness, as follows:
   1. Scratch Coat: Portland cement mix or pre-packaged mix with embedded mesh reinforcing.
   2. Brown Coat: Portland cement mix or pre-packaged mix.
   4. Plaster Finish Coats: Apply to provide finish to match Architect's sample.

C. Soffits; Mixes for use over paper-backed metal lath having 3/4-inch total thickness, as follows:
   1. Scratch Coat: Portland cement mix or pre-packaged mix with embedded mesh reinforcing.
   2. Brown Coat: Portland cement mix or pre-packaged mix.
   4. Plaster Finish Coats: Apply to provide float finish.

D. Reinforcing Mesh: Embed mesh into plaster base coat in accordance with manufacturer's instructions and as follows:
   1. First Floor and High-Traffic Areas: One layer 4 oz per sq.yd. over one layer 12 oz per sq.yd.
   2. Second Floor and Above: One layer 12 oz per sq.yd.
   3. Soffits: One layer 4 oz per sq.yd.

E. Acrylic-Based Finish Coatings: Apply coating system, including primers, finish coats, and sealing topcoats, according to manufacturer's written instructions.

F. Concealed Exterior Plasterwork: Where plaster application is used as a base for adhered finishes, omit finish coat.

3.7 PLASTER REPAIRS

A. Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.

3.8 CLEANING AND PROTECTION

A. Remove temporary protection and enclosure of other work after plastering is complete. Promptly remove plaster from door frames, windows, and other surfaces not indicated to be plastered. Repair floors, walls, and other surfaces stained, marred, or otherwise damaged during plastering.
END OF SECTION
SECTION 092900 - GYPSUM BOARD

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Interior gypsum board.
   2. Tile backing panels.
   4. Gypsum board accessories.

B. Related Requirements:
   1. Section 061600 "Sheathing" for gypsum sheathing for exterior walls.
   2. Section 072100 "Thermal Insulation" for thermal batts installed in stud wall cavities
   3. Section 079200 "Joint Sealants" for acoustical sealant.
   4. Section 092116.23 "Gypsum Board Shaft Wall Assemblies" for metal shaft-wall framing, gypsum shaft liners, and other components of shaft-wall assemblies.
   5. Section 092216 "Non-Structural Metal Framing" for non-structural steel framing that supports gypsum board panels.
   6. Section 098100 "Acoustical Insulation" for sound-attenuation blankets installed as part of sound-rated wall and ceiling assemblies.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Samples for Verification: For the following products:
   1. Trim Accessories: Full-size Sample in 12-inch-long length for each trim accessory indicated.

1.4 QUALITY ASSURANCE

A. Mockups: Build mockups of at least 100 sq. ft. in surface area to demonstrate aesthetic effects and to set quality standards for materials and execution.
   1. Build mockups for the following:
      a. Each level of gypsum board finish indicated for use in exposed locations.
   2. Simulate finished lighting conditions for review of mockups.
   3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
1.5 DELIVERY, STORAGE AND HANDLING

A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.6 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.

B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.

C. Do not install panels that are wet, moisture damaged, and mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

C. Ceiling and wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 GYPSUM BOARD, GENERAL

A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

B. Regional Materials: Products shall be manufactured within 100 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

C. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.
2.3 INTERIOR GYPSUM BOARD

A. Gypsum Board, Type X: ASTM C 1396/C 1396M.
   1. Basis-of-design Product: Subject to compliance with requirements, provide the following or comparable by Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Gypsum.
      b. CertainTeed Corporation.
      c. Georgia-Pacific Building Products.
      e. United States Gypsum Company; EcoSmart Panels Firecode X (Basis-of-Design).
   2. Thickness: 5/8 inch.

B. Gypsum Ceiling Board: ASTM C 1396/C 1396M.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Gypsum.
      b. CertainTeed Corporation.
      c. Georgia-Pacific Building Products.
      e. United States Gypsum Company.
   2. Thickness: 1/2 inch or 5/8 inch.

C. Impact-Resistant Gypsum Board: ASTM C 1396/C 1396M gypsum board, tested according to ASTM C 1629/C 1629M.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Gypsum.
      b. CertainTeed Corporation.
      c. Georgia-Pacific Building Products.
      e. United States Gypsum Company.
   2. Core: 5/8 inch, Type X.
   3. Surface Abrasion: ASTM C 1629/C 1629M, meets or exceeds requirements.
   4. Indentation: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements.
   5. Soft-Body Impact: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements.
   8. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

D. Mold-Resistant Gypsum Board: ASTM C 1396/C 1396M. With moisture- and mold-resistant core and paper surfaces.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Gypsum.
      b. CertainTeed Corporation.
      c. Georgia-Pacific Building Products.
e. United States Gypsum Company.

2. Core: 5/8 inch, Type X.
4. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

2.4 SPECIALTY GYPSUM BOARD

A. Glass-Mat Interior Gypsum Board: ASTM C 1658/C 1658M. With fiberglass mat laminated to both sides. Specifically designed for interior use.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Georgia-Pacific Building Products; DensArmour Plus.
      b. National Gypsum Company; eXP Interior Extreme.
   2. Core: 5/8 inch, Type X.
   4. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

B. Acoustically Enhanced Gypsum Board: ASTM C 1396/C 1396M. Multilayer products constructed of two layers of gypsum boards sandwiching a viscoelastic sound-absorbing polymer core.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      b. Quiet Solution.
      c. Temple-Inland Building Products by Georgia-Pacific.
   2. Core: 5/8 inch, Type X.

2.5 TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Board: ASTM C 1178/C 1178M, with manufacturer’s standard edges.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. CertainTeed Corporation.
      b. Georgia-Pacific Building Products.
      c. National Gypsum Company.
   2. Core: 5/8 inch, Type X.
   3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

B. Cementitious Backer Units: ANSI A118.9 and ASTM C 1288 or ASTM C 1325, with manufacturer’s standard edges.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. C-Cure.
      b. CertainTeed Corporation.
      c. Custom Building Products.
d. James Hardie Building Products, Inc.
e. National Gypsum Company.
f. United States Gypsum Company.

2. Thickness: As indicated.
3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

2.6 TRIM ACCESSORIES

A. Interior Trim: ASTM C 1047.
   1. Material: Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized-steel sheet.
   2. Shapes:
      a. Cornerbead.
      b. LC-Bead: J-shaped; exposed long flange receives joint compound.
      c. L-Bead: L-shaped; exposed long flange receives joint compound.
      d. Expansion (control) joint.

B. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Fry Reglet Corporation.
      b. Gordon, Inc.
      c. Pittcon Industries.
   2. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221, Alloy 6063-T5.
   3. Finish: As indicated.
   4. Products: Provide the following in locations indicated on Drawings, or Architect approved equal.
      a. WALL TRIM TYPE 1 – Fry Reglet; DRM-50-75 2 PIECE finish power coat color white.
      b. WALL TRIM TYPE 2 – Fry Reglet; DRM-625-50 finish powder coat color white.
      c. WALL TRIM TYPE 3 – Fry Reglet; DRM-SNAP-IN-625 finish powder coat color white.

2.7 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C 475/C 475M.

B. Joint Tape:
   1. Interior Gypsum Board: Paper.
   2. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
   3. Tile Backing Panels: As recommended by panel manufacturer.

C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.
   1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use drying-type, all-purpose compound.
   a. Use setting-type compound for installing paper-faced metal trim accessories.
3. Fill Coat: For second coat, use setting-type or sandable topping compound.
4. Finish Coat: For third coat, use sandable topping drying-type, all-purpose compound.

D. Joint Compound for Tile Backing Panels:
   1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
   2. Water-Resistant Gypsum Backing Board: Use setting-type taping compound and setting-type, sandable topping compound.

2.8 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.

B. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.
   1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
   2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

C. Sound-Attenuation Blankets: As specified in Section 098100 "Acoustical Insulation."

D. Thermal Insulation: As specified in Section 072100 "Thermal Insulation."

E. Acoustical Sealant: Refer to Section 079200 "Joint Sealants."

F. Firestop Putty Pads for Electrical Boxes: Listed intumescent moldable firestop putty pads. Coordinate locations with fire-rated partition types.
   1. Available Products: Subject to compliance with requirements, provide one of the following:
      a. Hilti Corporation; CP 617 6" x 7" Putty Pad or CP 617L 7" x 7" Putty Pad.
      b. Kinetics Noise Control; IsoBacker.
      c. Specified Technologies Inc. (STI); SpecSeal Series SSP Putty Pad.

G. Acoustic Putty Pads for Electrical Boxes: Asbestos-free, putty pads composed of polybutene-butyl and inert fillers. Coordinate locations with sound-rated partition types.
   1. Available Products: Subject to compliance with requirements, provide one of the following:
      a. Kinetics Noise Control; IsoBacker.
      b. Specified Technologies Inc. (STI); SpecSeal Series SSP Putty Pad.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLYING AND FINISHING PANELS, GENERAL

A. Comply with ASTM C 840.

B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.

D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

E. Form control and expansion joints with space between edges of adjoining gypsum panels.

F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
   1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
   2. Fit gypsum panels around ducts, pipes, and conduits.
   3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch wide joints to install sealant.

G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch- wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
I. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant specified in Section 079200 “Joint Sealants.” Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings. Install sound-isolation strips at end of wall against perimeter wall or curtain wall mullion in accordance with Section 092261 “Non-Structural Metal Framing.”

J. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

K. Install fire rated putty pads in fire-rated walls and acoustical putty pads in sound-rated walls before installing gypsum panels. Install according to putty pad manufacturer’s instructions.

L. Install thermal insolation before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.3 APPLYING INTERIOR GYPSUM BOARD

A. Install interior gypsum board in the following locations:
   1. Type X: Typical interior surfaces, except as indicated.
   2. Ceiling Type: Ceiling surfaces.
   3. Mold-Resistant Type: Non-tiled areas in wet locations as indicated on Drawings and where gypsum board must be installed prior to building being enclosed and conditioned.
      1. Impact-Resistant Type: Stairway side of metal-stud-framed stairway enclosures.
      5. Acoustically Enhanced Type: Acoustically-rated sound control partitions.
      6. Tile Backer Board: Either glass-mat-faced or cement backer boards.

B. Single-Layer Application:
   1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
   2. On partitions/walls, apply gypsum panels horizontally (perpendicular to framing) unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
      a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
      b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
   3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
   4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

C. Multilayer Application:
   1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, 16 inches minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.

3. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.

4. Fastening Methods: Fasten base layers with screws; fasten face layers with adhesive and supplementary fasteners.

3.4 APPLYING TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Panels: Comply with manufacturer's written installation instructions and install at locations indicated to receive tile. Install with 1/4-inch gap where panels abut other construction or penetrations.

B. Cementitious Backer Units: Comply with manufacturer's written installation instructions and install in accordance with ANSI A108.11.

C. Water-Resistant Backing Board: Install where indicated with 1/4-inch gap where panels abut other construction or penetrations.

D. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.5 INSTALLING TRIM AND ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

B. Control Joints: Install control joints according to ASTM C 840, in specific locations approved by Architect for visual effect and as follows.

1. Install at changes in backup material.
2. Framed Openings:
   a. Doors: Install above both jambs unless indicated or directed otherwise.
   b. Glazed Openings: Install above and below both jambs unless indicated or directed otherwise.
3. Install at other locations indicated on Drawings.

C. Interior Trim: Install in the following locations:

1. Cornerbead: Use at outside corners.
2. LC-Bead: Use at exposed panel edges.
3. L-Bead: Use where indicated.
4. U-Bead: Use where indicated.

D. Aluminum Trim: Install in locations indicated on Drawings in accordance with manufacturer's instructions.
E. Firestop Putty Pads: Install at electrical boxes located in fire-rated partitions. Install in accordance with pad manufacturer's instructions.

F. Acoustic Putty Pads: Install at electrical boxes located in acoustic-rated partitions. Install in accordance with pad manufacturer's instructions.

3.6 FINISHING GYPSUM BOARD

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

B. Prefill open joints and damaged surface areas.

C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.

D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C 840:
   1. Level 1: Ceiling plenum areas, concealed areas, behind built-in cabinets and equipment, and where indicated.
   2. Level 2: Panels that are substrate for tile.
   3. Level 3: Panels that are substrate for heavy grade wall coverings.
   4. Level 4: Typical at panel surfaces that will be exposed to view, unless otherwise indicated, including panels scheduled to receive flat or eggshell paint finish, or light-grade wall coverings.
      a. Primer and its application to surfaces are specified in Section 099123 "Interior Painting."
   5. Level 5: Apply skimcoat and feather out the corners as detailed. Refer to locations indicated on Drawings as follows:
      a. Locations:
         1) At panel surfaces scheduled to receive gloss or semigloss paint finish.
         2) Outer-shell (lobby side) of planetarium enclosure.
         3) Lobby at first, second, and third floor walls and ceilings/soffits.
         4) Other surfaces subject to severe or critical natural or artificial side lighting.
      b. Primer and its application to surfaces are specified in Section 099123 "Interior Painting."

E. Glass-Mat Gypsum Sheathing Board: Finish according to manufacturer's written instructions for use as exposed soffit board.

F. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.

G. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.7 PROTECTION

A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION
SECTION 093013 - TILING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Porcelain tile.
   2. Solid surface thresholds.
   3. Waterproof membrane.
   4. Crack isolation membranes.
   5. Metal edge strips.

B. Related Requirements:
   1. Section 079200 "Joint Sealants" for sealing of expansion, contraction, control, and isolation joints in tile surfaces.
   2. Section 092900 "Gypsum Board" for glass-mat, water-resistant backer board.

1.3 DEFINITIONS

A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.

C. Module Size: Actual tile size plus joint width indicated.

D. Face Size: Actual tile size, excluding spacer lugs.

E. Wet Area: The term "wet area" refers to shower rooms and other areas with similar usages. It does not refer to toilet rooms and other similar areas where water on the floor is seldom encountered.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.
1.5 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 090413.

B. Product Data: For each type of product.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

E. Samples for Initial Selection: For tile, grout, and accessories involving color selection.

F. Samples for Verification:
   1. Full-size units of each type and composition of tile and for each color and finish required. For ceramic mosaic tile in color blend patterns, provide full sheets of each color blend.
   2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least 36 inches square, but not fewer than four tiles. Use grout of type and in color or colors approved for completed Work.
   3. Solid surface thresholds in 6-inch lengths.
   4. Metal edge strips in 6-inch lengths.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.
   2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.7 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Installer is a five-star member of the National Tile Contractors Association or a Trowel of Excellence member of the Tile Contractors’ Association of America.

B. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Product Certificates: For each type of product.

C. Mockups: Build in-place visual mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Build mockup of each type of floor tile installation.
   2. Build mockup of each type of wall tile installation with base.
3. Build mockup of landscape rock installation; approximately 48 sq. ft. to demonstrate aesthetic effect.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.

B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.

C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.

D. Store liquid materials in unopened containers and protected from freezing.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Tile: Obtain tile of each type and color or finish from single source or producer.
   1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.

B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from single manufacturer and each aggregate from single source or producer.
   1. Obtain setting and grouting materials, except for unmodified Portland cement and aggregate, from single manufacturer.
   2. Obtain waterproof membrane and crack isolation membrane, except for sheet products, from manufacturer of setting and grouting materials.

C. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer:
   1. Solid surface thresholds.
   2. Waterproof membrane.
   3. Crack isolation membrane.
   4. Metal edge strips.

D. For full system warranty, provide the following products from single manufacturer as indicated. This does not preclude the use of other products or other manufacturer's offering the same warranted system.
1. Tile setting mortar.
2. Grout
4. Uncoupling membrane.
5. Crack isolation membrane.

2.2 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
   1. Provide tile complying with Standard grade requirements unless otherwise indicated.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.

C. Dynamic Coefficient of Friction: Provide tile installed on walkway surfaces with dynamic coefficient of friction indicated as determined by testing identical products per ANSI A137.1 DCOF AcuTest procedure.
   1. Dynamic Coefficient of Friction: Not less than 0.42.

D. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.

E. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.
   1. Where tile is indicated for installation in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.

2.3 TILE PRODUCTS

A. General: Refer to Drawings for tile type, manufacturer, and size.

B. Landscape Rocks: Refer to Drawings; Vary size between 2-1/2-inch and 5-inch diameter.

2.4 THRESHOLDS

A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.
   1. Bevel edges at 1:2 slope, with lower edge of bevel aligned with or up to 1/16 inch above adjacent floor surface. Finish bevel to match top surface of threshold. Limit height of threshold to 1/2 inch or less above adjacent floor surface.

B. Solid-Surface Material Thresholds: Homogeneous solid thresholds of filled plastic resin complying with ANSI SS1.
   1. Type: Standard Type.
   2. Colors and Patterns: As selected by Architect from manufacturer's full range.
2.5 TILE BACKING PANELS

A. Specified in Section 092900 "Gypsum Board."

2.6 WATERPROOF MEMBRANE

A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's, or provide listed product for full system warranty:
   1. Custom Building Products
   2. Laticrete International, Inc.
   3. MAPEI Corporation;

C. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following for full-system warranty, or Architect approved equal by listed manufacturer:

2.7 CRACK ISOLATION MEMBRANE

A. General: Manufacturer's standard product that complies with ANSI A118.12 for high performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's, or provide listed product for full system warranty:
   1. Custom Building Products
   2. Laticrete International, Inc.
   3. MAPEI Corporation;

   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following for full-system warranty, or Architect approved equal by listed manufacturer:
      a. Product: Laticrete International, Inc.; Fracture Ban

2.8 UNCOUPLING MEMBRANE

A. General: Manufacturer's standard product that complies with ANSI A118.12 for high performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's, or provide listed product for full system warranty:
   1. Custom Building Products
   2. Laticrete International, Inc.
3. Schluter Systems, LLP.

   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following for full-system warranty, or Architect approved equal by listed manufacturer:
      a. Laticrete International, Inc.; Strata Mat

2.9 SETTING MATERIALS

   1. Cleavage Membrane: Asphalt felt, ASTM D 226/D 226M, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 4.0 mils thick.

B. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's, or provide listed product for full system warranty:
   1. ARDEX GmbH.
   2. Custom Building Products.
   3. Laticrete International, Inc.
   4. MAPEI Corporation.

C. Setting Mortar and Bond Coat: Polymer-modified mortar adhesive (Thinset Bond Coat); ANSI A118.4.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following for full-system warranty, or Architect approved equal by listed manufacturer:
      a. Floor Product: Laticrete International Inc.; Laticrete 254 Platinum, or 254R for rapid-setting.

2.10 GROUT MATERIALS

A. Manufacturer's: Subject to compliance with requirements, provide products from one of the following manufacturer's, or provide listed product for full system warranty:
   1. ARDEX GmbH.
   2. Custom Building Products.
   3. Laticrete International, Inc.
   4. MAPEI Corporation.

B. High-Performance Tile Grout: ANSI A118.7.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following for full-system warranty, or Architect approved equal by listed manufacturer:
      a. Laticrete International Inc.; Permacolor grout.
   2. Reference Finish Schedule for grout color and joint thickness.

C. Water-Cleanable Epoxy Grout: ANSI A118.3.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following for full-system warranty, or Architect approved equal by listed manufacturer:
2. Reference Finish Schedule for grout color and joint thickness.

2.11 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Vapor- Retarder Membrane: Polyethylene sheeting, ASTM D 4397, 4.0 mils thick, tape seams.

C. Mesh Tape: 2-inch wide self-adhesive fiberglass mesh tape as instructed by backer manufacturer.

D. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.12 METAL EDGE STRIPS

A. Metal Edge Strips: Tile edge protection and transitions strips of width shown, of height required to protect exposed edges of tile, and maximum available lengths to minimize running joints; satin anodized aluminum.

1. Basis of Design Manufacturers: Subject to compliance with requirements, provide the following basis-of-design shapes as manufactured by Schluter Systems, LP, as required for the Project, or comparable by one of the following:
   b. Progress Profiles.

2. Basis-of-Design Products: As occurs. Sizes as indicated on Drawings.
   a. Tile to Concrete Floor: Schluter Reno Ramp
   b. Tile to Flush Height Carpet: Schluter Schiene
   c. Tile to Thin Carpet: Schluter Reno-TK
   d. Tile to Resilient Flooring: Schluter Reno-U
   e. Tile wainscot top and exposed Edges: Schluter Rondec-DB
   f. Other conditions as required or indicated as directed by Architect.

2.13 ELASTOMERIC SEALANTS

A. General: Provide sealants, primers, backer rods, and other sealant accessories that comply with the following requirements and with the applicable requirements in Section 07 9200 "Joint Sealants."

1. Sealants shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.

B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints unless otherwise indicated.

2.14 MIXING MORTARS AND GROUT

A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
B. Add materials, water, and additives in accurate proportions.

C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.

2. Verify that concrete substrates for tile floors installed with adhesives bonded mortar bed thinset mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.
   a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
   b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.

3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.

4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Refer to TCNA EJ171 for treatment of tile setting at movement joints. Do not bridge movement joints.

B. Cracks: Provide crack isolation sheet membrane or fluid-applied waterproofing compound to existing cracks with width equal to 3 times width of the tile and then place a 6 inch strip of glass fiber mesh reinforcement, or comparable product as recommended by tile setting material manufacturer, centered on the crack and firmly embedded in the waterproofing compound in accordance with TCNA F125 - Partial. If deemed necessary to install full coverage crack isolation membrane, install according to TCNA F125- Full.

C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

D. Lightweight Concrete Slabs: Verify compatibility of tile products with use on lightweight concrete. Prepare slab as instructed by setting material and waterproofing material manufacturers.
E. Install tile backer boards on metal studs and prepare for tile installation according to Section 092900 "Gypsum Board."

3.3 CERAMIC TILE INSTALLATION

A. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.

1. For the following installations, follow procedures in the ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:
   a. Tile floors in wet areas.
   b. Tile floors consisting of tiles 8 by 8 inches or larger.
   c. Tile floors consisting of rib-backed tiles.

B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

D. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.

E. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.

F. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
2. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
3. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.

G. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:

1. Porcelain Tile: 1/16 inch.

H. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.

I. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tile.

1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
2. Apply sealant and back-up to joints.
3. Apply sealant to junction of tile and dissimilar materials and junction of dissimilar planes.

J. Solid Surface Thresholds: Install thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
   1. Do not extend cleavage membrane, waterproofing, or crack isolation membrane under thresholds set in modified dry-set mortar. Fill joints between such thresholds and adjoining tile set on waterproofing or crack isolation membrane with elastomeric sealant.

K. Metal Edge Strips: Install at exposed edges, and where edge of tile flooring meets carpet or resilient flooring that finishes flush with or below top of tile and no threshold is indicated.

3.4 WATERPROOFING INSTALLATION

A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.

B. Allow waterproofing to cure and verify by testing that it is watertight before installing tile or setting materials over it.

3.5 CRACK ISOLATION MEMBRANE INSTALLATION

A. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness that is bonded securely to substrate.

B. Allow crack isolation membrane to cure before installing tile or setting materials over it.

C. When allowed by waterproof membrane manufacturer, crack isolation membrane may be omitted where fluid-applied waterproofing is indicated.

3.6 UNCOUPLING MEMBRANE INSTALLATION

A. Install uncoupling membrane to comply with manufacturer's written instructions using mortar bond coat on properly prepared waterproof membrane. Provide typical under porcelain and large format tile.

3.7 INSTALLATION - FLOORS - THIN-SET METHODS

A. General: Refer to TCNA design methods and tile installation Schedule at the end of this Section to suit condition. Not all conditions may be listed, and in some cases methods have been modified and combined to meet specific project conditions.

3.8 INSTALLATION - FLOORS - MORTAR BED METHODS

A. General: Refer to TCNA design methods and tile installation Schedule at the end of this Section to suit condition. Not all conditions may be listed, and in some cases methods have been modified and combined to meet specific project conditions.
3.9 INSTALLATION - WALL TILE
   A. General: Refer to TCNA design methods and tile installation Schedule at the end of this Section to suit condition. Not all conditions may be listed, and in some cases methods have been modified and combined to meet specific project conditions.
   B. Over cementitious backer board on vapor retarder membrane on metal studs, install with modified non-sagging cement mortar adhesive in accordance with TCNA Method W244 with high-performance grout.
   C. Over coated glass mat backer board on metal studs, install with modified non-sagging cement mortar adhesive in accordance with TCNA Method W248 with high-performance grout.

3.10 ADJUSTING AND CLEANING
   A. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.
   B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
      1. Remove grout residue from tile as soon as possible.
      2. Clean grout smears and haze from tile according to tile and grout manufacturer’s written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

3.11 PROTECTION
   A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
   B. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.
   C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.12 INTERIOR CERAMIC TILE INSTALLATION SCHEDULE
   A. General: Utilize the following as applicable to conditions indicated on Drawings.
   B. Interior Floor Installations, Concrete Subfloor: Porcelain Tile
      1. Tile Installation: TCNA F111 (Modified) and ANSI A108.1C; cement mortar bed on uncoupling membrane, on- or above- grade.
         a. Setting: Tile set with dry-set bond coat on uncoupling membrane set with dry-set bond coat on unreinforced mortar bed over cleavage membrane, with total thickness to allow flush set tile in recessed concrete slab as indicated.
1) **Bond Coat:** Thinset mortar compatible with uncoupling membrane, either modified or unmodified as instructed by uncoupling membrane manufacturer.

b. Grout: **Provide high-performance unsanded grout at porcelain tile.**

2. **Tile Installation:** TCNA F122; thinset mortar on uncoupling membrane on waterproof membrane, on- or above-grade.

a. **Setting:** Tile thinset with bond coat on uncoupling membrane set with bond coat on waterproof membrane.

   1) **Bond Coat:** Thinset mortar compatible with uncoupling membrane, either modified or unmodified as instructed by uncoupling membrane manufacturer.

b. Grout: **Provide high-performance unsanded grout at porcelain tile.**

   1) Provide high-performance unsanded grout at porcelain tile.

   2) Provide water-cleanable epoxy grout on chemical-resistant floors.

3. **Tile Installation:** TCNA F128; thinset mortar on uncoupling membrane on-grade.

a. **Setting:** Tile thinset with bond coat on uncoupling membrane.

   1) **Bond Coat:** Thinset mortar compatible with uncoupling membrane, either modified or unmodified as instructed by uncoupling membrane manufacturer.

b. Grout: **Provide high-performance unsanded grout at porcelain tile.**

   1) Provide high-performance unsanded grout at porcelain tile.

   2) Provide water-cleanable epoxy grout on restroom floors.

C. **Interior Floor Installations, Concrete Subfloor: Landscape Rocks**

1. Use portland-cement setting mortar over cleavage membrane. Thickness of mortar may vary according to effect and ability to bond rocks to substrate.

D. **Interior Wall Installations, Metal Studs or Furring: Porcelain Tile**

1. Using one of the following methods:

   a. **Porcelain Tile Installation:** TCNA W244C or TCNA W244F; thinset mortar on cementitious backer units over vapor-retarder membrane.

      1) **Tile Type:** Wall tile as indicated.

      2) **Thinset Mortar:** Modified dry-set mortar bond coat.

      3) **Grout:** High-performance grout.

   b. **Porcelain Tile Installation:** TCNA W248; thinset mortar on glass-mat, water-resistant gypsum backer board.

      1) **Tile Type:** Wall tile as indicated.

      2) **Thinset Mortar:** Modified dry-set mortar bond coat.

   c. **Grout:**

      1) Provide high-performance unsanded grout at porcelain tile.

      2) Provide water-cleanable epoxy grout on walls behind toilets.

2. For tile walls with waterproofing, use fluid-applied waterproofing and allow to cure before setting tile with mortar bond coat.
END OF SECTION
SECTION 095113 - SUSPENDED ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary
   Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:
   1. Suspended acoustical panels.
   2. Suspended acoustical clouds.
   3. Suspension systems for interior ceilings.

B. Related Requirements:
   1. Section 095423 “Suspended Metal Ceilings” for suspended metal ceiling baffles.

C. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling
   attachment devices to be cast in concrete.

1.3 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance
   Form may be submitted in lieu of required Product Data submittal and Samples submittal.
   Ensure compliance with requirements included in Section 090413.

B. Product Data: For each type of product.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Samples for Verification: For each component indicated and for each exposed finish required,
   prepared on Samples of sizes indicated below:
   1. Acoustical Panels: Set of 6-inch- square Samples of each type, color, pattern, and
      texture.
   2. Exposed Suspension-System Members, Moldings, and Trim: Set of 6-inch- long
      Samples of each type, finish, and color.

1.4 INFORMATIONAL SUBMITTALS

A. Evaluation Reports: For each acoustical panel ceiling suspension system and anchor and
   fastener type, from ICC-ES.

B. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are
   shown and coordinated with each other, using input from installers of the items involved:
   1. Ceiling suspension-system members.
   2. Structural members to which suspension systems will be attached.
3. Method of attaching hangers to building structure.
   a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment
device whose installation is specified in other Sections.

4. Carrying channels or other supplemental support for hanger-wire attachment where
   conditions do not permit installation of hanger wires at required spacing.

5. Size and location of initial access modules for acoustical panels.

6. Items penetrating finished ceiling and ceiling-mounted items including the following:
   a. Lighting fixtures.
   b. Diffusers.
   c. Grilles.
   d. Speakers.
   e. Sprinklers.
   f. Access panels.
   g. Perimeter moldings.

7. Show operation of hinged and sliding components covered by or adjacent to acoustical
   panels.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are
   packaged with protective covering for storage and identified with labels describing contents.
   1. Acoustical Ceiling Units: Full-size panels equal to 2 percent of quantity installed.

1.7 QUALITY ASSURANCE

A. Provide the following upon request:
   1. Qualification Data: For structural engineer and field testing agency.
   2. Product Test Reports: For each acoustical panel ceiling, for tests performed by
    manufacturer and witnessed by a qualified testing agency or by a qualified testing
    agency.
   3. Field quality-control reports.

B. Mockups: Build in-place mockups to verify selections made under Sample submittals, to
   demonstrate aesthetic effects, and to set quality standards for materials and execution.
   1. Build mockup of typical ceiling area as shown on Drawings, not less than 100 sq. ft..
   2. Approval of mockups does not constitute approval of deviations from the Contract
    Documents contained in mockups unless Architect specifically approves such deviations
    in writing.
   3. Subject to compliance with requirements, approved mockups may become part of the
    completed Work if undisturbed at time of Substantial Completion.
1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels, suspension-system components, and accessories to Project site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Suspended ceiling installation has been designed to withstand the effects of earthquake motions determined according to ASCE/SEI 7 as amended by 2016 CBC Section 1616.10.18 and Section 1616A.1.21.

B. Recycled Content of Metal Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Class A according to ASTM E 1264.
2. Smoke-Developed Index: 50 or less.

2.3 SUSPENDED ACOUSTICAL PANELS AND CLOUDS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

1. Armstrong World Industries, Inc.
2. CertainTeed Corporation.
3. Chicago Metallic Corporation.
B. Acoustical Panel Standard: Provide manufacturer's standard panels according to ASTM E 1264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.

C. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

2.4 METAL SUSPENSION SYSTEM

A. Metal Suspension-System Standard: Provide ceiling panel manufacturer's standard, direct-hung, metal suspension system and accessories according to ASTM C 635/C 635M and designated by type, structural classification, and finish indicated. Refer to A9.4.10 for specified system.

B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Narrow-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrotyically zinc coated, or hot-dip galvanized, G30 coating designation; with prefinished 9/16-inch wide metal caps on flanges as indicated.
   1. Structural Classification: Heavy-duty system.

D. Cloud Suspension: Provide manufacturer's standard deck hanging kit, including grippers, hangers, aircraft cable, panel inserts, and fasteners for groups and individual panels to suit condition.

E. Attachment Devices: Provide as indicated in accordance with ASTM C 635. Refer to Drawings for specific requirements and spacing.
   1. Anchors: Anchors of type and material indicated.
      a. Product: Refer to Drawings.
         1) Corrosion Protection: Carbon-steel components zinc plated according to ASTM B 633, Class SC 1 (mild) service condition.
   2. Power-Actuated Fasteners: Fastener system as indicated.

F. Wire Hangers, Braces, and Ties: Provide wires as follows:
   2. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than 0.106-inch diameter wire.
      3. Size:
         a. Hanger Wire Size: 0.106 inch (No. 12-gauge) diameter wire.
         b. Seismic Bracing Wire Size: 0.106 inch (No. 12-gauge) diameter wire.

G. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.

H. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.

I. Angle Hangers: Angles with legs not less than 7/8 inch wide; formed with 0.04-inch- thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 coating designation; with bolted connections and 5/16-inch- diameter bolts.
J. Hold-Down Clips: Manufacturer’s standard hold-down clip spaced as standard with manufacturer. Provide on ceilings within 20’-0” feet of exterior openings.

K. Seismic Clips: Manufacturer’s standard seismic clips designed to secure acoustical panels in place during a seismic event. Per ESR-1222, provide ACM7 and MAC2 clips.
   1. Location and Spacing: As recommended by manufacturer. Refer to Drawings.

L. Seismic Stabilizer Bars: Manufacturer’s standard perimeter stabilizers designed to accommodate seismic forces.
   1. Location and Spacing: As recommended by manufacturer. Refer to Drawings.

M. Seismic Struts: Manufacturer’s standard compression struts designed to accommodate seismic forces.
   1. Location and Spacing: As recommended by manufacturer. Refer to Drawings.

2.5 METAL EDGE MOLDINGS AND TRIM

A. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer’s standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
   1. Edge moldings shall fit acoustical panel edge details and suspension systems indicated and match width and configuration of exposed runners unless otherwise indicated.
      a. Provide manufacturer’s seismic perimeter clips used with standard nominal 7/8-inch wall angles, with current ICC Evaluation Service Report (ESR) acceptable to authority having jurisdiction.
   2. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.
   3. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

B. Edge Moldings and Trim: Provide exposed members as indicated or required to comply with seismic requirements of authorities having jurisdiction, to conceal edges of penetrations through ceiling, to conceal ends of pans and carriers, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching linear metal pans or extruded plastic unless otherwise indicated.

2.6 ACOUSTICAL SEALANT

A. Acoustical Sealant: As specified in Section 079200 “Joint Sealants.”
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.

B. Layout openings for penetrations centered on the penetrating items.

3.3 INSTALLATION

A. Install acoustical panel ceilings according to ASTM C 636/C 636M, seismic design requirements, and manufacturer’s written instructions.

1. Seismic Design Requirements: Install in accordance with the following:
   a. ASTM E 580/E 580M for Seismic Design Categories D, E, and F.
   b. ASTM E 580/E580M Section 5 as amended by 2016 CBC Section 1616.10.16 and Section 1616A.1.21.

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.

2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

   a. When required, do not splay hangers steeper than 1:6 as described in DSA IR 25.2.

3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.

4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly to structure or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.

6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.

7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.

8. Do not attach hangers to steel deck tabs.

9. Do not attach hangers to steel roof deck. Attach hangers to structural members.

10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.

11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

D. Install clouds in accordance with manufacturer's instructions.

E. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.

1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.

2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends. Miter corners accurately and connect securely.

3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

F. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

G. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.

1. Arrange directionally patterned acoustical panels as follows:
   a. As indicated on reflected ceiling plans.
   b. Install panels with pattern running in one direction parallel to [long] [short] axis of space.
   c. Install panels in a basket-weave pattern.

2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.

3. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.

4. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.

5. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
6. Install seismic clips in areas indicated; space according to panel manufacturer's written instructions unless otherwise indicated.
7. Install clean-room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.
8. Protect lighting fixtures and air ducts according to requirements indicated for fire-resistance-rated assembly.

3.4 ERECTION TOLERANCES

A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8 inch in 12 feet, non-cumulative.

B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 1/8 inch in 12 feet, non-cumulative.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Engage a qualified special inspector to perform the following special inspections:
   1. Periodic inspection during the installation of suspended ceiling grids according to ASCE/SEI 7.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform the following tests and inspections of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages and when installation of ceiling suspension systems on each floor has reached 20 percent completion, but no panels have been installed. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations of acoustical panel ceiling hangers show compliance with requirements.
   1. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf of tension.
   2. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.

D. Acoustical panel ceiling hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.

B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.
END OF SECTION
SECTION 095423 - SUSPENDED METAL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes suspended metal ceiling baffles and suspension systems.

1.3 DEFINITIONS
A. NRC: Noise Reduction Coefficient.

1.4 COORDINATION
A. Coordinate layout and installation of suspended metal ceiling and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.5 ACTION SUBMITTALS
A. Product Data: For each type of product.
B. Sustainable Design Submittals required by Section 01813 applicable to this Section.
C. Samples for Initial Selection: Manufacturer's available finishes for selection of wood grain.
D. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below:
   1. Suspended Metal Baffle: Set of 12-inch- long Samples of each type and color and a 12-inch- long spliced section.
   2. Exposed Molding and Trim: Set of 12-inch- long Samples of each type, finish, and color.

1.6 INFORMATIONAL SUBMITTALS
A. Evaluation Reports: For each suspended metal ceiling suspension system and anchor and fastener type, from ICC-ES.
B. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Suspended pattern.
   2. Joint pattern.
3. Ceiling suspension members.
4. Method of attaching hangers to building structure.
   a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment
devices whose installation is specified in other Sections.
5. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, and
access panels.
6. Ceiling perimeter and penetrations through ceiling; trim and moldings.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Testing Agency Qualifications: Accredited by National Voluntary Laboratory Accreditation
Program for testing indicated.

B. Provide the following upon request:
   1. Qualification Data: For testing agency.
   2. Product Test Reports: For each suspended metal ceiling, for tests performed by a
      qualified testing agency.
   3. Field quality-control reports.

C. Mockups: Build in-place mockup to verify selections made under Sample submittals and to
demonstrate aesthetic effects and to set quality standards for materials and execution.
   1. Build mockup of typical ceiling area as shown on Drawings, not less than 100 sq. ft..
   2. Approval of mockups does not constitute approval of deviations from the Contract
      Documents contained in mockups unless Architect specifically approves such deviations
      in writing.
   3. Subject to compliance with requirements, approved mockups may become part of the
      completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver suspended metal ceiling, suspension system components, and accessories to Project
site in original, unopened packages and store them in a fully enclosed, conditioned space where
they are protected against damage from moisture, humidity, temperature extremes, direct
sunlight, surface contamination, and other causes.

B. Handle suspended metal ceiling, suspension system components, and accessories carefully to
avoid damaging units and finishes in any way.

1.10 PROJECT CONDITIONS

A. Environmental Limitations: Do not install suspended metal ceilings until spaces are enclosed
and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and
ambient temperature and humidity conditions are maintained at the levels indicated for Project
when occupied for its intended use.
PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain each type of metal ceiling panel and supporting suspension system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Suspended ceiling installation has been designed to withstand the effects of earthquake motions determined according to ASCE/SEI 7 as amended by 2016 CBC Section 1616.10.16 and Section 1616A.1.21.

B. Recycled Content of Metal Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

C. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: Comply with ASTM E 1264 for Class A materials.
   2. Smoke-Developed Index: 450 or less.

2.3 SUSPENDED METAL CEILING PANELS

A. Suspended Metal Baffles and Suspension System, Type BC-1:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Ceilings Plus, or comparable product by one of the following below, BC-1 fastens to metal suspension system, refer to Drawings and article 2.4.A.
      a. Armstrong Ceiling
      b. Architectural Components Group
   2. Panel Edge Detail: Manufacturer's standard edge detail.
   3. Panel Face Width: As indicated on Drawings.
   5. End Cap, Finish of Exposed Portions: To match pan.
   6. NRC: Not less than 0.75.

B. Sheet Metal Characteristics: For metal components exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, roughness, stains, or discolorations.
   1. Aluminum Sheet: Brake formed aluminum sheet, complying with ASTM B 209; alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

C. Panel Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated to snap on and be securely retained on carriers without separate fasteners, and finished to comply with requirements indicated.

D. Panel Splices: Construction same as ceiling, in lengths 8 to 12 inches; with manufacturer's standard finish.

E. End Caps: Metal matching ceiling; fabricated to fit and conceal exposed ends of ceiling.
F.  Filler Strips: Metal matching ceiling; fabricated to uninterruptedly close voids between ceiling.

G.  Moldings and Trim: Provide manufacturer's standard moldings and trim for exposed members, and as indicated or required, for edges and penetrations of ceiling, around fixtures, at changes in ceiling height, and for other conditions; of same metal and finish as suspended metal ceiling.

H.  Sound-Absorbent Fabric Layer: Provide fabric layer, sized to fit concealed surface of pan, and consisting of black, nonwoven, nonflammable, sound-absorbent material with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E 84.
   1. Bond fabric layer to baffle in the factory with manufacturer's standard nonflammable adhesive.

2.4 METAL SUSPENSION SYSTEM

A.  Metal Suspension Systems Standard: Provide ceiling manufacturer's standard metal suspension systems of types and finishes indicated that comply with applicable ASTM C 635/C 635M requirements.
   A. USG - ESR 1222
   B. Armstrong - ESR 1308

B.  Suspension Systems: Provide metal ceiling manufacturer's standard torsion spring systems complete with carriers, splice sections, connector clips, alignment clips, leveling clips, hangers, molding, trim, retention clips, load-resisting struts, fixture adapters, and other suspension components required to support ceiling units and other ceiling-supported construction.

C.  Attachment Devices: Provide as indicated in accordance with ASTM C 635. Refer to Drawings for specific requirements and spacing.
   1. Anchors: Anchors of type and material indicated.
      a. Product: Refer to Drawings.
         1) Corrosion Protection: Carbon-steel components zinc plated according to ASTM B 633, Class SC 1 (mild) service condition.
   2. Power-Actuated Fasteners: Fastener system as indicated.

D.  Wire Hangers, Braces, and Ties: Provide wires as follows:
   2. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than 0.106-inch-diameter wire.
      3. Size:
         a. Hanger Wire Size: 0.106 inch (No. 12-gauge) diameter wire.
         b. Seismic Bracing Wire Size: 0.106 inch (No. 12-gauge) diameter wire.

E.  Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.

F.  Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.

G.  Angle Hangers: Angles with legs not less than 7/8 inch wide; formed from 0.04-inch-thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 coating designation; with bolted connections and 5/16-inch-diameter bolts.

1. Main Carriers: Aluminum, not less than 0.240-inch rolled sheet, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, complying with ASTM B 209.

I. Carrier Splices: Same metal, profile, and finish as for carriers.

J. Stabilizer Channels, Tees, and Bars: Manufacturer's standard components for stabilizing main carriers at regular intervals and at light fixtures, air-distribution equipment, access doors, and other equipment; spaced as standard with manufacturer for use indicated; and factory finished with matte-black baked finish.

K. Hold-Down Clips: Manufacturer's standard hold-down clip spaced as standard with manufacturer. Provide on ceilings within 20'-0" feet of exterior openings.

L. Seismic Clips: Manufacturer’s standard seismic clips designed to secure acoustical panels in place during a seismic event.
   1. Location and Spacing: As recommended by manufacturer. Refer to Drawings.

M. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
   1. Location and Spacing: As recommended by manufacturer. Refer to Drawings.

N. Seismic Struts: Manufacturer’s standard compression struts designed to accommodate seismic forces.
   1. Location and Spacing: As recommended by manufacturer. Refer to Drawings.

2.5 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

A. PVC-Free simulated wood-grained laminate, or comparable wood-grained veneer or film.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing and substrates to which suspended metal ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of suspended metal ceilings.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of suspended metal ceiling to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width ceiling at borders, and comply with layout shown on reflected ceiling plans and on Coordination Drawings.

3.3 INSTALLATION

A. Install acoustical panel ceilings according to ASTM C 636/C 636M, seismic design requirements, and manufacturer's written instructions.

1. Seismic Design Requirements: Install in accordance with the following:
   a. ASTM E 580/E 580M for Seismic Design Categories D, E, and F.
   b. ASTM E 580/E580M Section 5 as amended by 2016 CBC Section 1616.10.16 and Section 1616A.1.21.

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   a. When required, do not splay hangers steeper than 1:6 as described in DSA IR 25.2.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate to which hangers are attached and for type of hanger involved.
5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that does not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
8. Do not attach hangers to steel deck tabs.
9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers but without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

D. Install edge moldings and trim of type indicated at perimeter of suspended metal ceiling area and where necessary to conceal edges and ends of suspended metal ceiling.
   1. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension system carriers so they are aligned and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Cut suspended metal ceiling for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.

G. Install suspended metal ceiling in coordination with suspension system and exposed moldings and trim.
   1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
   2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating ceiling.
   3. If required by configuration and product limitations, install ceiling with butt joints using internal ceilingplies and in the following joint configuration:
      a. Staggered a minimum of 12 inches.
   4. Install directionally textured metal ceiling in directions indicated.
   5. Where metal pan ends are visible, install end caps unless trim is indicated.
   6. Install filler strips where indicated.

H. Install hold-down clips as required

3.4 FIELD QUALITY CONTROL

A. Special Inspections: Engage a qualified special inspector to perform the following special inspections:
   1. Suspended ceiling system.
   2. Hangers, anchors, and fasteners.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Tests and Inspections: Testing and inspecting of completed installations of suspended metal ceiling hangers and anchors and fasteners shall take place in successive stages, in areas of extent and using methods as follows. Do not proceed with installations of suspended metal ceiling hangers for the next area until test results for previously completed installations show compliance with requirements.
   1. Extent of Each Test Area: When installation of ceiling suspension systems on each floor has reached 20 percent completion but no panels have been installed.
a. Within each test area, testing agency will select 1 of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lb of tension; it will also select 1 of every 2 postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lb of tension.

b. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.

D. Suspended metal ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.5 CLEANING

A. Clean exposed surfaces of suspended metal ceilings, including trim and edge moldings after removing strippable, temporary protective covering if any. Comply with manufacturer’s written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.
SECTION 096513 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Resilient base.
   2. Resilient molding accessories.
   3. Metal transition strips.

B. Related Requirements:
   1. Section 090561.13 "Moisture Vapor Emission Control."

1.3 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 090413.

B. Product Data: For each type of product.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Samples for Verification: For each type of product indicated and for each color, texture, and pattern required in manufacturer's standard-size Samples, but not less than 12 inches long.

E. Product Schedule: For resilient base and accessory products.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F.
1.6 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive resilient products during the following time periods:
   1. 48 hours before installation.
   2. During installation.
   3. 48 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.

C. Install resilient products after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. FloorScore Compliance: Resilient base shall comply with requirements of FloorScore certification.

B. Resilient base shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 THERMOSET-RUBBER BASE

A. Basis-of-Design Products: Subject to compliance with requirements, provide products as manufactured by Johnsonite; A Tarkett Company, or comparable by one of the following:
   1. Burke Mercer Flooring Products, Division of Burke Industries Inc.
   2. Flexco.
   3. Nora Rubber Products
   4. Roppe Corporation, USA.

B. Product Standard: ASTM F 1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).
   1. Style and Location:
      a. RB-1: Straight: Provide in areas with carpet.
      b. RB-2, Cove: Provide in public areas and non-carpeted areas.
      c. RB-3: Provide in back-of-house areas.
   2. Thickness: 0.125 inch.
   3. Height: 4 inches.
   4. Lengths: Cut lengths 48 inches long or coils in manufacturer's standard length.
   5. Outside Corners: Preformed.
   6. Inside Corners: Job formed or preformed.
   7. Colors: As indicated by manufacturer's designations.
2.3 RUBBER MOLDING ACCESSORY

A. Description: Rubber carpet edge for glue-down applications nosing for carpet nosing for resilient flooring reducer strip for resilient flooring joiner for tile and carpet transition strips.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Johnsonite; A Tarkett Company.
   b. Roppe Corporation, USA.
   c. VPI, LLC, Floor Products Division.

2. Profile and Dimensions: As indicated.
3. Locations: Provide rubber molding accessories in areas indicated.
4. Colors and Patterns: As selected by Architect from full range of industry colors.

2.4 METAL TRANSITION STRIPS

A. Metal Edge/Transition Strips: Extruded aluminum with clear anodized finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

1. Product: Subject to compliance with requirements, provide products by one of the following to suit conditions:
   a. Progress Profiles
   b. Schluter Systems

2.5 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by resilient-product manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Installation of resilient products indicates acceptance of surfaces and conditions.
3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.

B. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

C. Do not install resilient products until they are the same temperature as the space where they are to be installed.
   1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.

D. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.3 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.

B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.

D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

E. Do not stretch resilient base during installation.

F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.

G. Preformed Corners: Install preformed corners before installing straight pieces.

H. Job-Formed Corners:
   1. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches in length.
      a. Miter or cope corners to minimize open joints.

3.4 RESILIENT ACCESSORY INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient accessories.

B. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.
3.5 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.

B. Perform the following operations immediately after completing resilient-product installation:
   1. Remove adhesive and other blemishes from exposed surfaces.
   2. Sweep and vacuum horizontal surfaces thoroughly.
   3. Damp-mop horizontal surfaces to remove marks and soil.

C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

END OF SECTION
SECTION 096516 - RESILIENT SHEET FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section includes rubber sheet flooring.
   B. Related Requirements:
      1. Section 090561.13 "Moisture Vapor Emission Control."
      2. Section 096513 "Resilient Base and Accessories" for resilient base, reducer strips, and
         other accessories installed with resilient sheet floor coverings.

1.3 ACTION SUBMITTALS
   A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance
      Form may be submitted in lieu of required Product Data submittal and Samples submittal.
      Ensure compliance with requirements included in Section 090413.
   B. Product Data: For each type of product.
   C. Sustainable Design Submittals required by Section 01813 applicable to this Section.
   D. Shop Drawings: For each type of flooring. Include flooring layouts, locations of seams,
      edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
      1. Show details of special patterns.
   E. Samples for Initial Selection:
      1. For heat-welding bead, manufacturer's standard-size Samples of each color available.
   F. Samples for Verification: In manufacturer's standard size, but not less than 6-by-9-inch
      (150-by-230-mm) sections of each different color and pattern of resilient sheet flooring required.
   G. Welded-Seam Samples: For seamless-installation technique indicated and for each resilient
      sheet flooring product, color, and pattern and selected welding bead color required; with seam
      running lengthwise and in center of 6-by-9-inch Sample applied to a rigid backing and prepared
      by Installer for this Project.
   H. Product Schedule: For resilient sheet flooring. Use same designations indicated on
      Drawings.
1.4 INFORMATIONAL SUBMITTALS

A. Certifications: Submit a certification signed by the manufacturer and installer stating that the resilient flooring has been installed as specified and in accordance with fire-test response characteristics.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of resilient sheet flooring to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Resilient Sheet Flooring: Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, in roll form and in full roll width for each type, color, and pattern of flooring installed.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for resilient sheet flooring installation and seaming method indicated.

1. Engage an installer who employs workers for this Project who are trained or certified by resilient sheet flooring manufacturer for installation techniques required.

B. Provide the following upon request;

1. Qualification Data: For Installer.

C. Mockups: Build in-place mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups for resilient sheet flooring including resilient base and accessories.
   a. Size: Minimum 100 sq. ft. for each type, color and pattern in locations directed by Architect.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store resilient sheet flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store rolls upright.
1.9 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, in spaces to receive resilient sheet flooring during the following time periods:
   1. 48 hours before installation.
   2. During installation.
   3. 48 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.

C. Close spaces to traffic during resilient sheet flooring installation.

D. Close spaces to traffic for 48 hours after resilient sheet flooring installation.

E. Install resilient sheet flooring after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For resilient sheet flooring, as determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
   1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

B. FloorScore Compliance: Resilient sheet flooring shall comply with requirements of FloorScore certification.

C. Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 RUBBER SHEET FLOORING

A. Basis-of-Design Products: Subject to compliance with requirements, provide products as indicated on Drawings, or comparable by one of the listed manufacturers.

B. Sheet Width: As standard with manufacturer.

C. Colors and Patterns: As indicated on Drawings by manufacturer's designations.

2.3 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by resilient sheet flooring manufacturer for applications indicated.
B. Adhesives: Water-resistant type recommended by flooring and adhesive manufacturers to suit resilient sheet flooring and substrate conditions indicated.

C. Seamless-Installation Accessories:
      a. Color: As selected by Architect from manufacturer's full range.

D. Integral-Flash-Cove-Base Accessories:
   1. Cove Strip: 1-inch radius provided or approved by resilient sheet flooring manufacturer.
   2. Cap Strip: Tapered rubber cap provided or approved by resilient sheet flooring manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
   1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient sheet flooring.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to resilient sheet flooring manufacturer's written instructions to ensure adhesion of resilient sheet flooring.

B. Concrete Substrates: Prepare according to ASTM F 710.
   1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
   2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by resilient sheet flooring manufacturer. Do not use solvents.
   3. Alkalinity and Adhesion Testing: Perform tests recommended by resilient sheet flooring manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 10 pH.
   4. Moisture Testing: Proceed with installation only after substrates pass testing according to resilient sheet flooring manufacturer's written recommendations, but not less stringent than the following:
      a. Perform anhydrous calcium chloride test according to ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
      b. Perform relative humidity test using in situ probes according to ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level.
      c. If water moisture tests exceed stated limits, apply vapor retarder for moisture vapor emission control as specified in Section 090561.13.
C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install resilient sheet flooring until it is the same temperature as the space where it is to be installed.
   1. At least 48 hours in advance of installation, move flooring and installation materials into spaces where they will be installed.

E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient sheet flooring.

3.3 RESILIENT SHEET FLOORING INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient sheet flooring.

B. Unroll resilient sheet flooring and allow it to stabilize before cutting and fitting.

C. Lay out resilient sheet flooring as follows:
   1. Maintain uniformity of flooring direction.
   2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches away from parallel joints in flooring substrates.
   3. Match edges of flooring for color shading at seams.
   4. Avoid cross seams.

D. Scribe and cut resilient sheet flooring to butt neatly and tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, and door frames.

E. Extend resilient sheet flooring into toe spaces, door reveals, closets, and similar openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on resilient sheet flooring as marked on substrates. Use chalk or other nonpermanent marking device.

G. Install resilient sheet flooring on covers for telephone and electrical ducts and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of flooring installed on covers and adjoining flooring. Tightly adhere flooring edges to substrates that abut covers and to cover perimeters.

H. Adhere resilient sheet flooring to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting resilient sheet flooring.

B. Perform the following operations immediately after completing resilient sheet flooring installation:
1. Remove adhesive and other blemishes from surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect resilient sheet flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Cover resilient sheet flooring until Substantial Completion.

END OF SECTION
SECTION 096519 - RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Solid luxury vinyl floor tile.

B. Related Requirements:
   1. Section 090561.13 "Moisture Vapor Emission Control."
   2. Section 096513 "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with resilient floor tile coverings.

1.3 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 013300 "Submittal Procedures."

B. Product Data: For each type of product.

C. Sustainable Design Submittals:
   1. Product Data: For adhesives, indicating VOC content.
   2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
   3. Product Data: For chemical-bonding compounds, indicating VOC content.
   4. Product Data: For recycled content.
   5. Laboratory Test Reports: For chemical-bonding compounds, indicating compliance with requirements for low-emitting materials.
   6. Product Data: For sealants, indicating VOC content.
   7. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.
   8. Laboratory Test Reports: For flooring products, indicating compliance with requirements for low-emitting materials.

D. Shop Drawings: For each type of floor tile. Include floor tile layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
   1. Show details of special patterns.

E. Samples for Verification: Full-size units of each color and pattern of floor tile required.
1.4 INFORMATIONAL SUBMITTALS

A. Certifications: Submit a certification signed by the manufacturer and installer stating that the resilient flooring has been installed as specified and in accordance with fire-test response characteristics.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of floor tile to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Floor Tile: Furnish one box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor tile installation and seaming method indicated.
   1. Engage an installer who employs workers for this Project who are trained or certified by floor tile manufacturer for installation techniques required.

B. Provide the following upon request:
   1. Qualification Data: For Installer.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store floor tiles on flat surfaces.

1.9 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive floor tile during the following time periods:
   1. 48 hours before installation.
   2. During installation.
   3. 48 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.

C. Close spaces to traffic during floor tile installation.

D. Close spaces to traffic for 48 hours after floor tile installation.
E. Install floor tile after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For resilient tile flooring, as determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
   1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

B. FloorScore Compliance: Resilient tile flooring shall comply with requirements of FloorScore certification.

C. Flooring products shall comply with requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 SOLID LUXURY VINYL FLOOR TILE

A. Basis-of-Design Products: Subject to compliance with requirements, products indicated on the Drawings, or Architect approved equal.
   1. Colors and Patterns: As indicated by on Drawings manufacturer's designations.

2.3 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.
   1. Adhesives shall have a VOC content of 50 g/L or less.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
   1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 PREPARATION

A. Prepare substrates according to floor tile manufacturer’s written instructions to ensure adhesion of resilient products.

B. Concrete Substrates: Prepare according to ASTM F 710.
   1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
   2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents.
   3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 9 pH.
   4. Moisture Testing: Proceed with installation only after substrates pass testing according to floor tile manufacturer’s written recommendations, but not less stringent than the following:
      a. Perform anhydrous calcium chloride test according to ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
      b. Perform relative humidity test using in situ probes according to ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level.
   5. If water moisture tests exceed stated limits, apply vapor retarder for moisture vapor emission control as specified in Section 090561.13.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install floor tiles until they are the same temperature as the space where they are to be installed.
   1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.

E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.

3.3 FLOOR TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing floor tile.

B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
   1. Lay tiles square with room axis.

C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
   1. Lay tiles with grain direction alternating in adjacent tiles (basket-weave pattern).

D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures.
including built-in furniture, cabinets, pipes, outlets, and door frames.

E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

G. Adhere floor tiles to flooring substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting floor tile.

B. Perform the following operations immediately after completing floor tile installation:
   1. Remove adhesive and other blemishes from exposed surfaces.
   2. Sweep and vacuum surfaces thoroughly.
   3. Damp-mop surfaces to remove marks and soil.

C. Protect floor tile from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Cover floor tile until Substantial Completion.

END OF SECTION
SECTION 096723 - RESINOUS FLOORING AND WALL COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes resinous flooring and wall coating systems.

1.2 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 013300 "Submittal Procedures."

B. Product Data: For each type of product. Include manufacturer's technical data, application instructions, and recommendations for each resinous coating system component required.

C. Sustainable Design Submittals in accordance with Section 01813 "Sustainable Design Requirements" applicable to this Section.

D. Samples for Initial Selection: For each floor and wall coating resin color and quartz additive for Architects selection.

E. Samples for Verification: For each resinous coating system required, 6 inches square, applied to a rigid backing by Installer for this Project.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For resinous flooring and wall coatings to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained or approved by coating manufacturer.

B. Manufacturer Field Technical Service Representatives: Resinous coating manufacturer's technical field representative who is trained specifically on installing the system to be used on the project shall be available to assist in the quality assurance and quality control process of the installation and shall be available to perform field problem solving issues with the installer.

C. Provide the following upon request:
   1. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
   2. Material Test Reports: For each resinous coating systems, by a qualified testing agency.

D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Apply full-thickness mockups on 48-inch- square floor area selected by Architect.
RESINOUS FLOORING AND WALL COATINGS

1. Include 48-inch length of integral cove base with inside and outside corner.

2. Simulate finished lighting conditions for Architect's review of mockups.

3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

1.6 FIELD CONDITIONS

A. Environmental Limitations: Comply with resinous coating manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous coating application.

B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous coating application.

C. Close spaces to traffic during resinous flooring application and for 24 hours after application unless manufacturer recommends a longer period.

D. Provide adequate ventilation.

E. Mask off floor drain outlets.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. VOC Content of Liquid-Applied Resinous Coating Components: Not more than 100 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Flammability: Self-extinguishing according to ASTM D 635.

2.2 MANUFACTURERS

A. Source Limitations: Obtain primary resinous flooring and wall coating materials, including primers, resins, hardening agents, and decorative aggregate from single source from single manufacturer. Obtain secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from manufacturer recommended in writing by manufacturer of primary materials.
2.3 RESINOUS FLOORING

A. Resinous Flooring System, Type RESF-1: Abrasion-, impact-, and chemical-resistant, decorative-aggregate-filled, and resin-based monolithic slip-resistant floor surfacing designed to produce a seamless floor, with integral cove base.

1. Basis-of-Design Product: Subject to compliance with requirements, provide SeamTek Type 3 Epoxy Quartz Flooring System as manufactured by Life Science Products, Inc., or Architect approved equal by one of the following:
   a. Sika Corporation.
   b. General Polymers.

B. Primer: Type recommended by resinous coating manufacturer for substrate and resinous flooring system indicated.

C. Waterproofing Membrane: Type recommended by resinous coating manufacturer for substrate and resinous flooring system indicated.

D. Undercoat: 100 percent epoxy.
   1. Resin: Two-component epoxy.
      a. Color: As selected by Architect from manufacturer's available colors.
   2. Number of Coats: One.
   3. Aggregates: Decorative ceramic coated quartz blends.
      a. Color: As selected by Architect from manufacturer's available colors.

E. Topcoat/Sealer Coat: Chemical resistant, UV stable, 100 percent epoxy sealing and finish coat.
   1. Resin: Two-component epoxy.
   2. Type: Clear.
   3. Number of Coats: One.
   4. Thickness of Coat: As instructed by manufacturer.

F. Integral Cove Base: High performance, coating consisting of epoxy resin, curing agent and selected, graded aggregates, 100 percent epoxy mortar system; 3/4 inch cove.

G. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:
   1. Compressive Strength: 11000 psi minimum according to ASTM C 579, 7-day.
   2. Tensile Strength: 2400 minimum according to ASTM C 307.
   3. Flexural Strength: 4000 psi minimum according to ASTM C 580.
   4. Impact Resistance: No chipping, cracking, or delamination at 160 in/lbs according to ASTM D 2794 and not more than 1/16-inch permanent indentation according to MIL-D-3134J.
   5. Abrasion Resistance: 0.03 gm. maximum weight loss according to ASTM D 4060.
   6. Hardness: 80 minimum, Shore D according to ASTM D 2240.
   7. Resistance to Heat: Delta E>8 according to ASTM F 970.
   8. Noise Reduction Coefficient: 0.05 per ASTM C 423.

2.4 RESINOUS WALL COATING

A. Resinous Wall Coating System, Type RESW-1: Abrasion-, impact-, and chemical-resistant,
solvent-free resin-based monolithic wall surfacing.

1. Basis-of-Design Product: Subject to compliance with requirements, provide SeamTek Epoxy GlassWall NR as manufactured by Life Science Products, Inc., or Architect approved equal.

B. System Characteristics:

1. Color: As selected by Architect from manufacturer's available colors.
2. Overall System Thickness: 12- to 15-mils dry, not including primer.

C. Primer: Type recommended by resinous coating manufacturer for substrate indicated.

D. Topcoat: 100 percent epoxy, compatible with flooring product by same manufacturer.

   1. Resin: Two-component epoxy.
   2. Type: Pigmented.
   3. Surface: Smooth, pinhole-free.

E. System Physical Properties: Provide resinous wall coating system with the following minimum physical property requirements when tested according to test methods indicated:

   1. Compressive Strength: 11000 psi minimum according to ASTM C 579, 7-day.
   2. Tensile Strength: 3000 minimum according to ASTM CD 638.
   3. Flexural Strength: 4000 psi minimum according to ASTM D 790.
   4. Abrasion Resistance: 0.035 gm. maximum weight loss according to ASTM D 4060.
   5. Hardness: 70 minimum, Shore D according to ASTM D 1706.
   7. Thermal Shock: No cracking or loss of adhesion according to MIL F 52505.

2.5 ACCESSORY MATERIALS

A. Patching and Leveling: Resinous epoxy-based grout designed for permanent repairs under specified flooring system. Use standard drain details, saw cut and chase.

B. Joint Sealant: Type recommended or produced by resinous coating manufacturer for type of service and joint condition indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine floor and wall surfaces in the presence of manufacturer's field representative.

B. Ensure floor drain inlets have been properly prepared for application of floor coating to protect drain piping from intrusion of resinous material that could cause drain to malfunction.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

D. Concrete Slabs: Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
1. **Moisture Testing:** Perform tests so that each test area does not exceed 1000 sq. ft., and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

   a. **Anhydrous Calcium Chloride Test:** ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.

   b. **Relative Humidity Test:** Using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 80 percent relative humidity level measurement.

   c. Perform additional moisture tests recommended by manufacturer. Proceed with installation only after substrates pass testing.

   d. If water moisture tests exceed stated limits, apply vapor retarder for moisture vapor emission control as specified in Section 090561.13.

3.2 **PREPARATION**

   A. Prepare and clean substrates according to resinous coating manufacturer's written instructions for substrate indicated. Provide clean, dry substrate for resinous coating application.

   B. **Concrete Substrates:** Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.

      1. Mechanically prepare substrates as follows:

         a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup or Diamond Grind with dust free system.

      2. Repair damaged and deteriorated concrete according to resinous flooring manufacturer's written recommendations.

      3. Verify that concrete substrates are dry.

   C. Perform additional moisture tests recommended by manufacturer. Proceed with application only after substrates pass testing. Use patching and fill material to fill holes and depressions in substrates according to manufacturer's written instructions.

   D. **Gypsum Board Substrates:** Paint ready.

   E. Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous coating according to manufacturer's written recommendations.

   F. **Resinous Materials:** Mix components and prepare materials according to resinous coating manufacturer's written instructions.

3.3 **RESINOUS COATING APPLICATION, GENERAL**

   A. **General:** Apply components of resinous floor and wall coating systems according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.

      1. Coordinate application of components to provide optimum adhesion of resinous coating system to substrate, and optimum intercoat adhesion.

      2. Cure resinous coating components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
3. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, comply with resinous coating manufacturer's written instructions.
   a. Apply joint sealant to comply with manufacturer's written instructions.

B. Begin coating application in the presence of coating manufacturer's technical field representative.

3.4 FLOORING APPLICATION

A. Begin coating application in the presence of coating manufacturer's technical field representative.

B. Apply primer and waterproofing coats over prepared substrate at manufacturer's recommended spreading rate wet on wet application.

C. Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details including those for taping, mixing, priming, troweling, and top coating of cove base. Round internal and external corners.

D. Undercoat: Mix and apply undercoat according to manufacturer's installation procedures and coverage rates. Allow to cure before applying topcoat.
   1. DFT: 3/16 inch thick
   2. Sanding: Broadcast aggregate to surface of undercoat to refusal according to manufacturer's written instructions as applicable to system specified. Thoroughly clean and vacuum surface once sanding has been completed. Allow to cure before applying topcoat. Omit decorative aggregate in vertical cove base.

E. Top Coat: Mix and apply topcoat according to manufacturer's installation procedures and coverage rates to achieve final dry thickness indicated, and allow to cure.

3.5 WALL APPLICATION

A. Begin coating application in the presence of coating manufacturer's technical field representative.

B. Apply primer over prepared substrate at manufacturer's recommended spreading rate wet on wet application.

C. Apply according to manufacturer's written instructions and details including those for taping, mixing, priming, troweling, and rolling as instructed.

3.6 TERMINATIONS

A. Scribe floor along lines of termination and chase edges to "lock" coating system into concrete substrate.

B. Penetration Treatment: Lap and seal coating onto the perimeter of the penetrating item by bridging over compatible elastomer at the interface to compensate for possible movement.

C. Trenches: Continue coating system into trenches to maintain monolithic protection. Treat cold joints to assure bridging of potential cracks.
D. Treat floor drains by chasing the coating to lock in place at point of termination.

3.7 JOINTS AND CRACKS

A. Treat control joints and to maintain monolithic protection.

B. Treat cold joints and construction joints to bridge potential cracks and to maintain monolithic protection on horizontal and vertical surfaces as well as horizontal and vertical interfaces.

C. Discontinue floor coating system at vertical and horizontal contraction and expansion joints by installing backer rod and compatible sealant after coating installation is completed. Provide sealant type instructed by manufacturer for traffic conditions and chemical exposures to be encountered.

3.8 CURING

A. Cure resinous flooring and wall materials in compliance with manufacturer's directions, taking care to prevent contamination during stages of application and prior to completion of curing process. Close area of application for a minimum of 24 hours.

3.9 CLEANING AND PROTECTION

A. Cleaning: Use cleaning materials and procedures recommended by resinous coating manufacturer during and immediately after installation.

B. Protection: Protect resinous flooring and wall coatings from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous coating manufacturer.

C. Final Cleaning: Remove temporary covering and clean resinous flooring and wall coatings just prior to final inspection. Use cleaning materials and procedures recommended by resinous coating manufacturer.

END OF SECTION
SECTION 096813 - TILE CARPETING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes modular carpet tile.

B. Related Requirements:
   1. Section 090561.13 "Moisture Vapor Emission Control."
   2. Section 096513 "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet tile.

1.3 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 090413.

B. Product Data: For each type of product.
   1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
   2. Include manufacturer's written installation recommendations for each type of substrate.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Shop Drawings: For carpet tile installation, plans showing the following:
   1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
   2. Carpet tile type, color, and dye lot.
   3. Type of subfloor.
   4. Type of installation.
   5. Pattern of installation.
   6. Pattern type, location, and direction.
   7. Pile direction.
   8. Type, color, and location of edge, transition, and other accessory strips.
   9. Transition details to other flooring materials.

E. Samples for Verification: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
   2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch-long Samples.
F. Product Schedule: For carpet tile. Use same designations indicated on Drawings.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
   1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
   2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd..

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is certified by the International Certified Floorcovering Installers Association at the Commercial II certification level.

B. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Product Test Reports: For carpet tile, for tests performed by a qualified testing agency.

C. Mockups: Build in-place mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
   1. Build mockups at locations and in sizes shown on Drawings; not less than 100 sq. ft..
   2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Comply with CRI's "CRI Carpet Installation Standard."

1.8 FIELD CONDITIONS

A. Comply with CRI's "CRI Carpet Installation Standard" for temperature, humidity, and ventilation limitations.

B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at levels planned for building occupants during the remainder of the construction period.
C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

D. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

1.9 WARRANTY

A. Special Warranty for Carpet Tiles: Manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.
   1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
   2. Failures include, but are not limited to, the following:
      a. More than 10 percent edge raveling, snags, and runs.
      b. Dimensional instability.
      c. Excess static discharge.
      d. Loss of tuft-bind strength.
      e. Loss of face fiber.
      f. Delamination.
   3. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CARPET TILE

A. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:

B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings, or Architect approved equal.

C. Color: As indicated by manufacturer's designations.

D. Pattern: Match Architect's samples.

E. Pile Height: Not more than 1/2 inch according to CBC Title 24 Chapter 11B.

F. Primary Backing/Backcoating: Manufacturer's standard composite materials.

G. Applied Treatments:
   2. Antimicrobial Treatment: Manufacturer's standard treatment that protects carpet tiles as follows:
      a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.

H. Sustainable Design Requirements:
1. Sustainable Product Certification: Silver level certification according to ANSI/NSF 140.
2. Flooring products shall comply with the requirements of the California Department of Public Health’s “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers.”

I. Performance Characteristics:
1. Appearance Retention Rating: Severe traffic, 3.5 minimum according to ASTM D 7330.
2. Critical Radiant Flux Classification: Not less than \[0.45 \text{ W/sq. cm} \] \[0.22 \text{ W/sq. cm}\] according to NFPA 253.
3. Dimensional Tolerance: Within \(1/32\) inch of specified size dimensions, as determined by physical measurement.
4. Electrostatic Propensity: Less than 3.5 kV according to AATCC 134.

2.2 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that comply with flammability requirements for installed carpet tile, and are recommended by carpet tile manufacturer for releasable installation.
1. Adhesives shall have a VOC content of 50 g/L or less.
2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health’s “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers.”

C. Metal Edge/Transition Strips: Refer to Section 096513 "Resilient Base and Accessories."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance.

B. Examine carpet tile for type, color, pattern, and potential defects.

C. Concrete Slabs: Verify that finishes comply with requirements specified in Section 033000 “Cast-in-Place Concrete” and that surfaces are free of cracks, ridges, depressions, scale, and foreign deposits.
1. Moisture Testing: Perform tests so that each test area does not exceed 1000 sq. ft., and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
   a. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
b. Relative Humidity Test: Using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.

c. Perform additional moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.

d. If water moisture tests exceed stated limits, apply vapor retarder for moisture vapor emission control as specified in Section 090561.13.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Comply with CRI's "Carpet Installation Standards" and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile.

B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider, and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.

C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet tile manufacturers.

D. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

A. General: Comply with CRI's "CRI Carpet Installation Standard," Section 18, "Modular Carpet" and with carpet tile manufacturer's written installation instructions.

B. Installation Method: Glue down; install every tile with full-spread, releasable, pressure-sensitive adhesive.

C. Maintain dye-lot integrity. Do not mix dye lots in same area.

D. Maintain pile-direction patterns recommended in writing by carpet tile manufacturer.

E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.

F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.

H. Install pattern parallel to walls and borders.
3.4 CLEANING AND PROTECTION

A. Perform the following operations immediately after installing carpet tile:
   1. Remove excess adhesive and other surface blemishes using cleaner recommended by carpet tile manufacturer.
   2. Remove yarns that protrude from carpet tile surface.

B. Protect installed carpet tile to comply with CRI's "Carpet Installation Standard," Section 20, "Protecting Indoor Installations."

C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION
SECTION 097200 - WALL COVERINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Dry-erase writable wall covering.
   2. Acoustic wall carpeting.
   3. Linoleum sheet wall surfacing.

B. Related Requirements:
   1. Section 099123 "Interior Painting" for priming wall surfaces.

1.3 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 013300 "Submittal Procedures."

B. Product Data: For each type of product.
   1. Include data on physical characteristics, durability, fade resistance, and fire-test-response characteristics.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Samples: For each type of wall covering and for each color, pattern, texture, and finish specified, full width by 36-inch-long in size.
   1. Trim: 12 inch length

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For wall coverings to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Wall-Covering Materials: For each type, color, texture, and finish, full width by length to equal to 5 percent of amount installed.
1.6 QUALITY ASSURANCE

A. Provide the following upon request:
   1. Qualification Data: For testing agency.
   2. Product Test Reports: For each wall covering, for tests performed by a qualified testing agency.

B. Mockups: Build in-place mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for installation.
   1. Build mockups for each type of wall covering on each substrate required. Comply with requirements in ASTM F 1141 for appearance shading characteristics; not less than 100 sq. ft..
   2. Obtain Architects approval of pattern orientation, seaming, quality of installation and aesthetic effects prior to commencement of remaining portion of work of this Section.
   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
   4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install wall coverings until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at levels intended for occupants after Project completion during the remainder of the construction period.

B. Lighting: Do not install wall covering until lighting that matches conditions intended for occupants after Project completion is provided on the surfaces to receive wall covering.

C. Ventilation: Provide continuous ventilation during installation and for not less than the time recommended by wall-covering manufacturer for full drying or curing.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
      a. Flame-Spread Index: 25 or less.
      b. Smoke-Developed Index: 450 or less.
### 2.2 DRY-ERASE WRITABLE WALL COVERING

A. **Basis-of-Design Product**, Keynote Type WWS-1: Subject to compliance with requirements, provide product indicated on Drawings or comparable product as indicated.

B. **Width**: 48 inches to 60 inches manufacturer's standard roll width.

C. **Installation Method**: Adhesive.

D. **Color**: As indicated.

### 2.3 WALL CARPETING

A. **Basis-of-Design Product**: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the listed manufacturers.

B. **Installation Method**: Adhesive.

C. **Pattern Direction**: Vertical, unless otherwise directed.

D. **Trim**: Manufacturer's standard; aluminum.

E. **Colors, Textures, and Patterns**: As indicated.

### 2.4 LINOLEUM SHEET WALL SURFACING

A. **Basis-of-Design Product**: Subject to compliance with requirements, provide "Bulletin Board" pinboard linoleum as manufactured by Forbo Flooring Systems, or Architect approved equal.

1. **Thickness**: 6.0 mm
2. **Size**: As indicated.
3. **Color**: As indicated on Drawings.
4. **Mounting**: As indicated on Drawings.

### 2.5 ACCESSORIES

A. **Adhesive**: Mildew-resistant, nonstaining, strippable adhesive, for use with specific wall covering and substrate application indicated and as recommended in writing by wall-covering manufacturer.

1. Adhesive shall have a VOC content of 50 g/L or less.

B. **Primer/Sealer**: Mildew resistant, complying with requirements in Section 099123 "Interior Painting" and recommended in writing by primer/sealer and wall-covering manufacturers for intended substrate.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for levelness, wall plumbness, maximum moisture content, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Comply with manufacturer's written instructions for surface preparation.

B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, mildew, and incompatible primers.

C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.
   1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
   2. Gypsum Board: Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.

D. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

E. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.

3.3 WALL-COVERING INSTALLATION

A. Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated.

B. Install strips in same order as cut from roll.
   1. For solid-color, even-texture, or random-match wall coverings, reverse every other strip.

C. Install wall covering without lifted or curling edges and without visible shrinkage.

D. Install seams vertical and plumb at least 6 inches from outside corners and 6 inches from inside corners unless a change of pattern or color exists at corner. Horizontal seams are not permitted.

E. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without overlaps or gaps between strips.

F. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.

G. Install trim.
3.4 CLEANING

A. Remove excess adhesive at seams, perimeter edges, and adjacent surfaces.

B. Use cleaning methods recommended in writing by wall-covering manufacturer.

C. Replace strips that cannot be cleaned.

D. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

END OF SECTION
SECTION 098100 - ACOUSTICAL INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Acoustical Insulation in sound rated partitions.
   2. Acoustical Insulation above suspended ceilings.

1.3 SUBMITTALS

A. Product Data: Provide data on product characteristics, performance criteria, and product limitations.

B. Manufacturer's Installation Instructions: Include information on special environmental conditions required for installation and installation techniques.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

1.4 QUALITY ASSURANCE

A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

B. Provide the following upon request:
   1. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.
   2. Manufacturer's Certificate: Certify that products meet or exceed specified requirements, and that products contain no asbestos.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the Project site in their original containers or packages or bundles bearing label clearly identifying manufacturer's name, brand, grade, UL listing, and other pertinent information.

B. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer’s written instructions for handling, storing, and protecting during installation.
1.6 FIELD CONDITIONS

A. Do not install insulation adhesives when temperature or weather conditions are detrimental to successful installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

2.2 ACOUSTICAL INSULATION MATERIALS

A. Batt Insulation - Walls: ASTM C 665, Type I; preformed batt; friction fit, for interior walls, conforming to the following:
   1. Material: Inorganic Glass Fiber with acrylic resin binder or Mineral Wool
   2. Flame Spread Index: 25 or less, when tested in accordance with ASTM E 84.
   3. Smoke Developed Index: 450 or less, when tested in accordance with ASTM E 84.
   4. Acoustical Performance: 3.5 inches
      a. NRC: 1.05
      b. STC: 49 minimum, installed in 3-5/8 metal stud wall with 5/8 inch gypsum board on each side.
   5. Facing: Unfaced.
   6. Manufacturers:
      c. Knauf Insulation; QuietTherm QT: www.knaufinsulation.us.
      d. Owens Corning Corp; QuietZone Acoustic Batts: www.owenscorning.com
      e. Thermafiber SAFB: www.thermafiber.com

B. Batt Insulation - Ceilings: ASTM C 665, Type I; preformed batt; above lay-in suspended ceilings, conforming to the following:
   1. Material: Inorganic Glass Fiber or Mineral Wool
   2. Flame Spread Index: 25 or less, when tested in accordance with ASTM E 84.
   3. Smoke Developed Index: 450 or less, when tested in accordance with ASTM E 84.
   4. Thickness: 2 and 3.5 inches, as indicated.
   5. Size: 24 inches by 48 inches
   7. Manufacturers:
      c. Knauf Insulation; QuietTherm QT: www.knaufinsulation.us.
      d. Owens Corning Corp; Sonobatts: www.owenscorning.com
      e. Thermafiber SAFB: www.thermafiber.com

C. Sustainability Requirements: Provide glass-fiber blanket insulation as follows:
   1. Free of Formaldehyde: Insulation manufactured with 100 percent acrylic binders and no formaldehyde.
2. Low Emitting: Insulation tested according to ASTM D 5116 and shown to emit less than 0.05-ppm formaldehyde.

2.3 ACCESSORIES

A. Insulation Fasteners: Impaling clip of galvanized steel with washer retainer and clips, to be mechanically fastened to surface to receive insulation, length to suit insulation thickness and substrate, capable of securely and rigidly fastening insulation in place.

B. Wire Mesh: Galvanized steel, hexagonal wire mesh.

C. Adhesives - General: Compatible with materials being adhered as instructed by insulation manufacturer for application; maximum VOC content of 50 g/L; GreenSeal GS-36 certified; in lieu of labeled product, independent test report showing compliance is acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that substrate, adjacent materials, and insulation materials are dry and that substrates are ready to receive insulation and adhesive.

B. Verify substrate surfaces are flat, free of honeycomb, fins, irregularities, or materials or substances that may impede adhesive bond.

3.2 BATT INSTALLATION

A. Install insulation in accordance with manufacturer's instructions.

B. Install in interior wall and furring spaces without gaps or voids. Do not compress insulation.

C. Trim insulation neatly to fit spaces. Insulate miscellaneous gaps and voids.

D. Fit insulation tightly in cavities and tightly to exterior side of mechanical and electrical services within the plane of the insulation. Insulation shall be tight within spaces in partitions, around cut openings, behind and around electrical and mechanical items within or behind partitions and tight to items passing through partitions.

E. Wall areas above ceiling: At side wall insulation in ceiling cavity, install adhesive-mounted impaling devices with metal caps at 24 inches vertically and at four (4) inches from each side of blankets horizontally. Install blankets with four (4) foot dimension running vertically on spikes, keeping blankets tight to exterior wall without crushing into each other.

F. Tape seal butt ends, lapped flanges, and tears or cuts in membrane.

3.3 INSTALLATION OF INSULATION IN CEILINGS FOR SOUND ATTENUATION

A. Where glass-fiber blankets are indicated for sound attenuation above ceilings separated by full-height partitions, install blanket insulation over entire ceiling area in thicknesses indicated. Extend insulation 48 inches up either side of partitions.
B. Where glass-fiber blankets are indicated for sound attenuation above suspended ceilings with partition below ceiling, fit insulation tightly above ceiling, loose laid. Refer to the suspended ceiling manufacturer's recommendations to ensure proper installation. Extend insulation 48 inches on both sides of partitions below.

3.4 PROTECTION

A. Protect installed insulation from damage due to physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION
SECTION 098433 - SOUND-ABSORBING WALL AND CEILING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
A. Section includes shop-fabricated, acoustical panel units tested for acoustical performance, including the following:
   1. Sound-absorbing wall panels.
   2. Acoustical board wall and ceiling panels.

1.3 DEFINITIONS
A. NRC: Noise Reduction Coefficient.

1.4 ACTION SUBMITTALS
A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 090413.
B. Product Data: For each type of product.
   1. Include panel edge, core material, and mounting indicated.
C. Sustainable Design Submittals required by Section 01813 applicable to this Section.
D. Shop Drawings: For unit assembly and installation.
   1. Include plans, elevations, sections, and mounting devices and details.
   2. Include details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge profile and core materials.
   3. Include details at cutouts and penetrations for other work.
   4. Include direction of fabric weave and pattern matching.
E. Samples for Verification: For the following products:
   1. Assembled Panels: Approximately 36 by 36 inches, including joints and mounting methods.

1.5 INFORMATIONAL SUBMITTALS
A. Coordination Drawings: Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Electrical outlets, switches, and thermostats.
2. Items penetrating or covered by units including the following:
   a. Lighting fixtures.
   b. Air outlets and inlets.
   c. Speakers.
   d. Alarms.
   e. Sprinklers.
   f. Access panels.
3. Show operation of hinged and sliding components covered by or adjacent to units.

1.6 CLOSEOUT SUBMITTALS
A. Maintenance Data: For each type of unit to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal instructions.

1.7 MAINTENANCE MATERIAL SUBMITTALS

1.8 QUALITY ASSURANCE
A. Provide the following upon request:
   1. Product Certificates: For each type of unit.

1.9 DELIVERY, STORAGE, AND HANDLING
A. Comply with fabric and unit manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

1.10 FIELD CONDITIONS
A. Environmental Limitations: Do not install units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
B. Lighting: Do not install units until a lighting level of not less than 50 fc is provided on surfaces to receive the units.
C. Air-Quality Limitations: Protect units from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.
D. Field Measurements: Verify unit locations and actual dimensions of openings and penetrations by field measurements before fabrication, and indicate them on Shop Drawings.
PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: Units shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E 84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   a. Flame-Spread Index: 25 or less.
   b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.

2.2 SOUND-ABSORBING WALL UNITS

A. Acoustical Wall Panel: Manufacturer's standard panel construction consisting of fabric facing material stretched over front face of edge-framed core and bonded or attached to edges and back of frame.

1. Basis-of-Design Product: Subject to compliance with requirements, provide products by one of the following using fabric indicated on Drawings or comparable by Architect approved equal:
   a. Conwed Designscape; an Owens Corning company.
   b. Decoustics Limited; a Saint Gobain company.
   c. Golterman & Sabo.
   d. Snowsound.
   e. Topakustik.

2. Panel Shape: Flat.

3. Mounting: Back mounted with manufacturer's standard metal z-clips or bar hangers, secured to substrate.

4. Core: Manufacturer's standard Glass-fiber board or Mineral-fiber board.
   a. Core-Face Layer: Manufacturer's standard tackable, impact-resistant, high-density board.

5. Edge Construction: Manufacturer's standard chemically hardened core with no frame.

6. Edge Profile: Square.

7. Corner Detail in Elevation: Square with continuous edge profile indicated.

8. Facing Material: As indicated.

9. Acoustical Performance: Sound absorption NRC of not less than 0.80 according to ASTM C 423 for Type A mounting according to ASTM E 795.

10. Nominal Core Thickness: As indicated on Drawings.

11. Panel Width: As indicated on Drawings.

12. Panel Height: As indicated on Drawings.

B. Core Materials: Manufacturer's standard.

1. Glass-Fiber Board: ASTM C 612; of type standard with manufacturer; nominal density of 6 to 7 lb/cu. ft., unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively; minimum density of 13 lb/cu. ft., and with perforated surface.

3. Tackable, Impact-Resistant, High-Density Board for Face Layer: 1/8-inch thick layer of compressed molded glass-fiber board with a nominal density of 16 to 18 lb/cu. ft. laminated to face of core.

C. Fabric Facing Material: Fabric from same dye lot; color and pattern as selected by Architect from manufacturer's full range.

2.3 ACOUSTIC BOARD WALL AND CEILING PANELS

A. Sound-Absorbing Wall Panel Board: Manufacturer's standard panel construction consisting of black matte facing material laminated to black fiberglass core.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by the following, or by Architect approved equal:
   a. Golterman & Sabo.
   b. Johns Manville.

2. Panel Shape: Flat.

3. Mounting:
   a. Wall: Back mounted with manufacturer's standard adhesive or hook and loop, secured to substrate.
   b. Ceiling: Direct mount as indicated.

4. Core: Manufacturer's standard Glass-fiber board.
5. Edge Construction: Manufacturer's standard.
6. Edge Profile: Square.
7. Corner Detail in Elevation: Square with continuous edge profile indicated.
8. Acoustical Performance: Sound absorption NRC of 0.90 according to ASTM C 423 for Type A mounting according to ASTM E 795.
9. Nominal Core Thickness: As indicated on Drawings.
10. Panel Width: As indicated on Drawings.
11. Panel Height: As indicated on Drawings.

2.4 ACCESSORY MATERIALS

A. Mounting Devices: Concealed on back of unit, recommended by manufacturer to support weight of unit, and as follows:

1. Adhesives: As recommended by unit manufacturer and with a VOC content of 70 g/L or less.
3. Metal Clips or Bar Hangers: Manufacturer's standard two-part metal "Z" clips, with one part of each clip mechanically attached to back of unit and the other part to substrate, designed to permit unit removal.

2.5 FABRICATION

A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.
B. Edge Hardening: For glass-fiber board and mineral-fiber board cores, chemically harden core edges and areas of core where mounting devices are attached.

C. Core-Face Layer: Evenly stretched over core face and edges and securely attached to core; free from puckers, ripples, wrinkles, or sags.

D. Facing Material: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
   2. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent units.

E. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch for the following:
   1. Thickness.
   2. Edge straightness.
   3. Overall length and width.
   4. Squareness from corner to corner.
   5. Chords, radii, and diameters.

PART 3 - EXECUTION

3.1 EXAMINATION
   A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting unit performance.

   B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION
   A. Install units in locations indicated. Unless otherwise indicated, install units with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.

   B. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.

   C. Align fabric pattern and grain as directed by Architect.

3.3 INSTALLATION TOLERANCES
   A. Variation from Plumb and Level: Plus or minus 1/16 inch in 48 inches, noncumulative.

3.4 CLEANING
   A. Clip loose threads; remove pills and extraneous materials.
B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION
SECTION 099113 - EXTERIOR PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary
   Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes surface preparation and the application of paint systems on exterior
   substrates.

B. Related Requirements:
   1. Section 055000 "Metal Fabrications" for shop priming metal fabrications.
   2. Section 055119 "Metal Grating Stairs" for shop priming metal grating stairs.
   3. Section 055213 "Pipe and Tube Railings" for shop priming pipe and tube railings.
   4. Section 099123 "Interior Painting" for paints used on interior surfaces.
   5. Section 099600 "High-Performance Coatings" for high-performance epoxy and
      polyurethane coatings.

1.3 DEFINITIONS

A. MPI Gloss Level 4 (Satin Finish): 20 to 35 units at 60 degrees and not less than
   35 units at 85 degrees, according to ASTM D 523.

B. MPI Gloss Level 5 (Semi-Gloss Finish): 35 to 70 units at 60 degrees, according to ASTM D 523.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application
   instructions.
   1. Include printout of current "MPI Approved Products List" for each product category
      specified, with the proposed product highlighted.
   2. Indicate VOC content.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Samples for Verification: For each type of paint system and each color and gloss of topcoat.
   1. Submit Samples on rigid backing, 8 inches square.
   2. Apply coats on Samples in steps to show each coat required for system.
   3. Label each coat of each Sample.
   4. Label each Sample for location and application area.

D. Product List: Cross-reference to paint system and locations of application areas. Use same
   designations indicated on Drawings and in schedules. Include color designations.
1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials[, from the same product run,] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Paint: 5 percent, but not less than 1 gal. of each material and color applied.

1.6 QUALITY ASSURANCE

A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Architect will select one surface to represent surfaces and conditions for application of each paint system.
      a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft..
      b. Other Items: Architect will designate items or areas required.
   2. Final approval of color selections will be based on mockups.
      a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
   4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
   1. Maintain containers in clean condition, free of foreign materials and residue.
   2. Remove rags and waste from storage areas daily.

1.8 FIELD CONDITIONS

A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.

B. Do not apply paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Benjamin Moore & Co.
2.2 PAINT, GENERAL

A. Material Compatibility:
   1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
   2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.

B. VOC Content: For field applications, paints and coatings shall comply with VOC content limits of authorities having jurisdiction.

C. Colors: As selected by Architect from manufacturer's full range.
   1. Ten percent of surface area will be painted with deep tones.

2.3 SOURCE QUALITY CONTROL

A. Testing of Paint Materials: District reserves the right to invoke the following procedure:
   1. District will engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
   2. Testing agency will perform tests for compliance with product requirements.
   3. District may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

2. Dunn-Edwards Corporation.
4. PPG Paints - PPG Architectural Coatings, Inc.
5. Sherwin-Williams Company (The).

B. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to products listed in the Exterior Painting Schedule for the paint category indicated.

C. Provide products indicated, or provide MPI-listed equivalent products from listed manufacturer's premium or professional product line.
B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
   1. Concrete: 12 percent.

C. Proceed with coating application only after unsatisfactory conditions have been corrected.
   1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and paint systems indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
   1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.

C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
   1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.

D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.

E. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer.

F. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

G. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.

H. Aluminum Substrates: Remove loose surface oxidation.

I. Plastic Trim Fabrication Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."
   1. Use applicators and techniques suited for paint and substrate indicated.
   2. Paint surfaces behind movable items same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed items with prime coat only.
3. Paint both sides and edges of exterior doors and entire exposed surface of exterior door frames.
4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.

B. Tint undercoats same color as topcoat, but tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
1. Paint the following work where exposed to view:
   a. Equipment, including panelboards and switch gear, unless factory-applied finished.
   b. Uninsulated metal piping.
   c. Uninsulated plastic piping.
   d. Pipe hangers and supports.
   e. Metal conduit.
   f. Plastic conduit.
   g. Tanks that do not have factory-applied final finishes.

3.4 FIELD QUALITY CONTROL

A. Dry Film Thickness Testing: District may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
   1. Contractor shall touch up and restore painted surfaces damaged by testing.
   2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 EXTERIOR PAINTING SCHEDULE

A. Concrete Substrates, Nontraffic Surfaces:
   1. Do not paint exposed formed architectural concrete, unless otherwise indicated.
   2. Latex System MPI EXT 3.1A:
      a. Prime Coat: Primer, alkali resistant, water based, MPI #3.
         1) Kelly-Moore 247 AcryShield 100-Percent Acrylic Exterior Masonry Primer
      c. Topcoat: Acrylic Latex, exterior, satin (MPI Gloss Level 4), MPI #15.
         1) Kelly-Moore 1247 AcryShield 100-Percent Acrylic Exterior Satin Enamel.

B. Steel and Iron Substrates:
   1. Water-Based Light Industrial Coating System MPI EXT 5.1C Modified:
         1) Kelly-Moore 5725 DTM Acrylic Metal Primer/Finish
      c. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #154.

C. Galvanized-Metal Substrates:
   1. Water-Based Light Industrial Coating System MPI EXT 5.3J Modified:
      a. Prime Coat: Primer, galvanized, water based, MPI #134.
         1) Kelly-Moore 5725 DTM Acrylic Metal Primer/Finish.
      c. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #154.

D. Aluminum Substrates:
   1. Water-Based Light Industrial Coating System MPI EXT 5.6G Modified:
      a. Prime Coat: Primer, quick dry, for aluminum, as recommended by topcoat manufacturer to suit conditions.
      c. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #154.

E. Stainless-Steel Substrates:
1. Prime Coat: Primer, quick dry, for aluminum, as recommended by topcoat manufacturer to suit conditions.
3. Topcoat: Light industrial coating, exterior, water based, semi-gloss (MPI Gloss Level 5), MPI #154.

F. Fiberglass Substrates:
1. Water-Based Light Industrial Coating System MPI EXT 6.8C Modified:
   a. Prime Coat: Primer, bonding, water based, MPI #17.
      1) Kelly-Moore 287 KEL-BOND Adhesion Plus
   c. Topcoat: Light industrial coating, exterior, water based, Semi-Gloss (MPI Gloss Level 5), MPI #11.
      1) 1250 AcryShield Exterior 100-Percent Acrylic Semi-Gloss Enamel

G. Plastic Trim Fabrication Substrates:
1. Water-Based Light Industrial Coating System MPI EXT 6.8C Modified:
   a. Prime Coat: Primer, bonding, water based, MPI #17.
      1) Kelly-Moore 287 KEL-BOND Adhesion Plus
   c. Topcoat: Light industrial coating, exterior, water based, Semi-Gloss (MPI Gloss Level 5), MPI #11.
      1) 1250 AcryShield Exterior 100-Percent Acrylic Semi-Gloss Enamel

END OF SECTION
SECTION 099123 - INTERIOR PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes surface preparation and the application of paint systems on the following interior substrates:
   1. Concrete.
   2. Steel and iron.
   3. Wood.
   4. Fiberglass.
   5. Plastic.
   7. Cotton or canvas insulation covering.
   8. ASJ insulation covering.

B. Related Requirements:
   1. Section 051200 "Structural Steel Framing" and Section 051213 "Architecturally Exposed Structural Steel Framing" for shop priming structural steel.
   2. Section 055000 "Metal Fabrications" for shop priming metal fabrications.
   3. Section 055113 "Metal Pan Stairs" for shop priming metal pan stairs.
   4. Section 055213 "Pipe and Tube Railings" for shop priming pipe and tube railings.
   5. for shop priming metal gratings.
   6. Section 099113 "Exterior Painting" for paints used on exterior surfaces.
   7. Section 099600 "High-Performance Coatings" for high-performance epoxy and polyurethane coatings.

1.3 DEFINITIONS

A. MPI Gloss Level 1 (Matte or Flat Finish): Not more than five units at 60 degrees and 10 units at 85 degrees, according to ASTM D 523.

B. MPI Gloss Level 3 (Eggshell Finish): 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D 523.

C. MPI Gloss Level 5 (Semi-Gloss Finish): 35 to 70 units at 60 degrees, according to ASTM D 523.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.
   1. Include Printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
2. Indicate VOC content.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.
   1. Submit Samples on rigid backing, 8 inches square.
   2. Apply coats on Samples in steps to show each coat required for system.
   3. Label each coat of each Sample.
   4. Label each Sample for location and application area.

D. Product List: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Paint: 5 percent, but not less than 1 gal. of each material and color applied.

1.6 QUALITY ASSURANCE

A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Architect will select one surface to represent surfaces and conditions for application of each paint system.
      a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft..
      b. Other Items: Architect will designate items or areas required.
   2. Final approval of color selections will be based on mockups.
      a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
   1. Maintain containers in clean condition, free of foreign materials and residue.
   2. Remove rags and waste from storage areas daily.

1.8 FIELD CONDITIONS

A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.
B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

1. Benjamin Moore & Co.
2. Dunn-Edwards Corporation.
4. PPG Paints - PPG Architectural Coatings, Inc.
5. Sherwin-Williams Company (The).

B. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to products listed in the Exterior Painting Schedule for the paint category indicated.

C. Provide products indicated, or provide MPI-listed equivalent products from listed manufacturer's premium or professional product line.

2.2 PAINT, GENERAL

A. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.

B. VOC Content: For field applications that are inside the weatherproofing system, paints and coatings shall comply with South Coast Air Quality Management District (SCAQMD), Rule 1113, effective 07/01/2008:

1. Flat Paints, Coatings, and Primers: 50 g/L.
2. Nonflat Paints, Coatings, and Primers: 50 g/L.
3. Nonflat (High Gloss) Paints, Coatings, and Primers: 50 g/L.
4. Primers, Sealers, and Undercoaters: 100 g/L.
5. Anticorrosive and Anti-Rust Paints Applied to Ferrous Metals: 100 g/L.
6. Clear Wood Finishes, Lacquers: 275 g/L.
7. Clear Wood Finishes, Varnishes: 275 g/L.
8. Dry-Fog Coatings: 150 g/L.
9. Floor Coatings: 50 g/L.
10. High Temperature Industrial Maintenance Coatings: 420 g/L.
11. Industrial Maintenance Coatings: 100 g/L.
12. Pretreatment Wash Primers: 420 g/L.
13. Shellacs, Clear: 730 g/L.
14. Shellacs, Pigmented: 550 g/L.
15. Zinc-Rich Industrial Maintenance Primers: 100 g/L.
C. Low-Emitting Materials: For field applications that are inside the weatherproofing system, 90 percent of paints and coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

D. Colors: As indicated in the finish schedule on the Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
   1. Concrete: 12 percent.
   2. Wood: 15 percent.
   3. Gypsum Board: 12 percent.

C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.

D. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.

E. Proceed with coating application only after unsatisfactory conditions have been corrected.
   1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and paint systems indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
   1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
   1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.

D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.

E. Steel Substrates: Remove rust, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer but not less than the following:
1. SSPC-SP 3.

F. Architecturally Exposed Steel Substrates: Remove rust, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer but not less than the following:
   1. SSPC-SP7/NACE No. 4.

G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

H. Wood Substrates:
   1. Scrape and clean knots, and apply coat of knot sealer before applying primer.
   2. Sand surfaces that will be exposed to view, and dust off.
   3. Prime edges, ends, faces, undersides, and backsides of wood.
   4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.

I. Cotton or Canvas Insulation Covering Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions and to recommendations in "MPI Manual."
   1. Use applicators and techniques suited for paint and substrate indicated.
   2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
   3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
   4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
   5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
   1. Paint the following work where exposed in equipment rooms:
      a. Equipment, including panelboards and switch gear, unless factory-applied finished.
      b. Uninsulated metal piping.
2. Paint the following work where exposed in occupied spaces:
   a. Equipment, including panelboards.
   b. Uninsulated metal piping.
   c. Uninsulated plastic piping.
   d. Pipe hangers and supports.
   e. Metal conduit.
   f. Plastic conduit.
   g. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
   h. Other items as directed by Architect.

3. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

3.4 FIRE-RATED AND SMOKE CONTAINMENT ASSEMBLIES

A. Fire walls, fire barriers, fire partitions, smoke barriers and smoke partitions or any other wall required to have protected openings or penetrations shall be effectively and permanently identified with signs or stenciling. Such identification shall:
   1. Be located in accessible concealed floor, floor-ceiling or attic spaces; and
   2. Be repeated at intervals not exceeding 30 feet measured horizontally along both sides of the wall or partition; and
   3. Include lettering not less than 0.5 inch in height, incorporating the suggested wording: "X HOUR FIRE AND/OR SMOKE BARRIER-PROTECT ALL OPENINGS" or other wording approved or required by AHJ (Authority Having Jurisdiction). Replace "X" with the appropriate designated hourly rating.
   4. Apply a minimum one-inch wide bright red horizontal line, both sides of wall, interrupted for approved text, at the required interval.

B. Refer to the Life Safety Plan Drawings for locations of walls and applicable ratings.

3.5 FIELD QUALITY CONTROL

A. Dry Film Thickness Testing: District may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
   1. Contractor shall touch up and restore painted surfaces damaged by testing.
   2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.6 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.7 INTERIOR PAINTING SCHEDULE

A. Concrete Substrates, Nontraffic Surfaces:
   1. Do not paint exposed formed architectural concrete, unless otherwise indicated.
   2. Institutional Low-Odor/VOC Latex System MPI INT 3.1M:
         1) Kelly-Moore AcryShield Interior Wall Primer Undercoat
      c. Topcoat: One of the following as directed by Architect:
         1) Latex, interior, institutional low odor/VOC Satin/Egg-shell (MPI Gloss Level 3), MPI #145.
            a) Kelly-Moore 1510 EnviroCoat 100% Acrylic Interior Eggshell Enamel
         2) Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147.
            a) Kelly-Moore 1520 EnviroCoat 100% Acrylic Interior Semi-Gloss Enamel

B. Concrete Substrates, Traffic Surfaces, Architectural: Refer to Section 033546 a Sealed Concrete Finishing.

C. Concrete Substrates, Traffic Surfaces, Industrial/Maintenance: Refer to Section 071800 Traffic Coatings.

D. Steel Substrates:
   1. Institutional Low-Odor/VOC Latex System MPI INT 5.1S:
      a. Prime Coat: Primer, rust inhibitive, as recommended by finish coats manufacturer to suit conditions.
      c. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147 X-Green.
         1) Kelly-Moore 1500 EnviroCoat 100% Acrylic Interior Semigloss Enamel
   2. Water-Based Dry-Fall System MPI INT 5.1C:
      a. Prime Coat: Shop primer specified in Section where substrate is specified, or alkyd, quick dry, metal primer as recommended by topcoat manufacturer to suit conditions.
      b. Topcoat: Dry fall, latex, satin (MPI Gloss Level 3), MPI #155.
         1) Kelly-Moore 481 Dry Fog II Satin Latex Maintenance Finish.

E. Aluminum (Not Anodized or Otherwise Coated) Substrates:
   1. Institutional Low-Odor/VOC Latex System MPI INT 5.4G:
a. Prime Coat: Primer, quick dry, for aluminum as recommended by topcoat manufacturer to suit conditions.
c. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147 X-Green.
   1) Kelly-Moore 1500 EnviroCoat 100% Acrylic Interior Semigloss Enamel

   1. Institutional Low-Odor/VOC Latex System MPI INT 6.3V:
      a. Prime Coat: Primer, latex, for interior wood, MPI #39.
         1) Kelly-Moore 295 KEL-BOND Acrylic Universal Primer Intermediate Coat:
            Latex, interior, institutional low odor/VOC, matching topcoat.
      b. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147 X-Green.
         1) Kelly-Moore 1500 EnviroCoat 100% Acrylic Interior Semigloss Enamel

G. Fiberglass Substrates:
   1. Institutional Low-Odor/VOC Latex System MPI INT 6.7J:
      a. Prime Coat: Primer, bonding, water based, MPI #17.
         1) Kelly-Moore 287 KEL-BOND Adhesion Plus.
      c. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147 X-Green.
         1) Kelly-Moore 1500 EnviroCoat 100% Acrylic Interior Semigloss Enamel

H. Plastic Substrates:
   1. Institutional Low-Odor/VOC Latex System MPI INT 6.8F:
      a. Prime Coat: Primer, bonding, water based, MPI #17
         1) Kelly-Moore 287 KEL-BOND Adhesion Plus
      c. Topcoat: Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147 X-Green.
         1) Kelly-Moore 1500 EnviroCoat 100% Acrylic Interior Semigloss Enamel
         2) 3)

I. Gypsum Board Substrates:
   1. Institutional Low-Odor/VOC Latex System MPI INT 9.2M:
      a. Prime Coat: Primer sealer, interior, institutional low odor/VOC, as recommended by topcoat manufacturer to suit conditions.
      c. Topcoat: One of the following as directed by Architect:
         1) Topcoat: Latex, interior, institutional low odor/VOC, flat (MPI Gloss Level 1), MPI #143 X-Green.
            a) Kelly-Moore 1500 EnviroCoat 100% Acrylic Interior Flat Enamel
2) Latex, interior, institutional low odor/VOC Satin/Egg-shell (MPI Gloss Level 3), MPI #145 X-Green.
   a) Kelly-Moore 1500 EnviroCoat 100% Acrylic Interior Eggshell Enamel
3) Latex, interior, institutional low odor/VOC, semi-gloss (MPI Gloss Level 5), MPI #147 X-Green.
   a) Kelly-Moore 1500 EnviroCoat 100% Acrylic Interior Semigloss Enamel

2. High-Performance Epoxy Coating: Refer to Section 099600 High-Performance Coatings.
3. Dry Erase Coating:
   a. Wall finish: Prepare to Level 5.
   b. Prime Base Coat: Magnetic primer, three coats at 5 wet mils per coat.
      1) IdeaPaint Magnetic Primer, White.
   c. Prime Coat: Primer sealer, latex, interior, as recommended by topcoat manufacturer to suit conditions; one coat.
   d. Topcoat: White, dry-erase topcoat, one coat at 5 mils per coat.
      1) IdeaPaint Create, White.

J. Cotton or Canvas and ASJ Insulation-Covering Substrates: Including pipe and duct coverings
1. Institutional Low-Odor/VOC Latex System MPI INT 10.1D:
   a. Prime Coat: Primer sealer, latex, interior, as recommended by topcoat manufacturer to suit conditions.
   c. Topcoat: Latex, interior, institutional low odor/VOC, low-sheen (MPI Gloss Level 2), MPI #144 X-Green
      1) Kelly-Moore 1500 EnviroCoat 100% Acrylic Interior Low Sheen Enamel.

END OF SECTION
SECTION 099600 - HIGH-PERFORMANCE COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes surface preparation and the application of high-performance coating systems on the following substrates:

1. Exterior Substrates:
   a. Steel.
   b. Galvanized metal.
   c. Non-ferrous metal.

2. Interior Substrates:
   a. Steel.
   b. Gypsum board.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" and Section 051213 "Architecturally Exposed Structural Steel Framing" for shop priming of structural steel with primers specified in this Section.

2. Section 055213 "Pipe and Tube Railings" for shop priming pipe and tube railings with coatings specified in this Section.

3. Section 099113 "Exterior Painting" for general exterior field painting.

4. Section 099123 "Interior Painting" for general interior field painting.

1.3 DEFINITIONS

A. MPI Gloss Level 5 (Semi-Gloss Finish): 35 to 70 units at 60 degrees, according to ASTM D 523.

B. MPI Gloss Level 6 (Gloss Finish): 70 to 85 units at 60 degrees, according to ASTM D 523.

C. MPI Gloss Level 7 (High-Gloss Finish): More than 85 units at 60 degrees, according to ASTM D 523.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.

2. Indicate VOC content.
B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Samples for Verification: For each type of coating system and each color and gloss of topcoat indicated.
   1. Submit Samples on rigid backing, 8 inches square.
   2. Apply coats on Samples in steps to show each coat required for system.
   3. Label each coat of each Sample.
   4. Label each Sample for location and application area.

D. Product List: Cross-reference to coating system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials[, from the same product run,] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Coatings: [5] <Insert number> percent, but not less than [1 gal.] <Insert number> of each material and color applied.

1.6 QUALITY ASSURANCE

A. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Architect will select one surface to represent surfaces and conditions for application of each coating system.
      a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft..
      b. Other Items: Architect will designate items or areas required.
   2. Final approval of color selections will be based on mockups.
      a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to District.
   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
   4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
   1. Maintain containers in clean condition, free of foreign materials and residue.
   2. Remove rags and waste from storage areas daily.
1.8 FIELD CONDITIONS

A. Apply coatings only when temperature of surfaces to be coated and ambient air temperatures are between 50 and 95 deg F.

B. Do not apply coatings when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

C. Do not apply exterior coatings in snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. Benjamin Moore & Co.
   2. Carboline.
   3. Devoe Paint Company; Akzo Nobel.
   4. PPG Paints - PPG Architectural Coatings, Inc.
   5. Sherwin-Williams Company (The).
   6. Tnemec Company, Inc.

B. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to products listed in the Exterior High-Performance Coating Schedule or Interior High-Performance Coating Schedule for the coating category indicated.

C. Provide products indicated, or provide MPI-approved equivalent products from listed manufacturer's premium or professional product line.

2.2 HIGH-PERFORMANCE COATINGS, GENERAL

A. Material Compatibility:
   1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
   2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
   3. Products shall be of same manufacturer for each coat in a coating system.

B. VOC Content: For field applications that are inside the weatherproofing system, paints and coatings shall comply with VOC content limits of the South Coast Air Quality Management District (SCAQMD), Rule 1113, effective 07/01/2008 and the following VOC content limits:
   1. Flat Paints, Coatings, and Primers: VOC content of not more than 50 g/L.
   2. Nonflat Paints, Coatings, and Primers: VOC content of not more than 50 g/L.
   3. Nonflat (High Gloss) Paints, Coatings, and Primers: VOC content of not more than 50 g/L.
   4. Anticorrosive and Anti-Rust Paints Applied to Ferrous Metals: VOC content of not more than 100 g/L.
   5. Clear Wood Finishes, Varnishes: VOC not more than 275 g/L.
6. Clear Wood Finishes, Lacquers: VOC not more than 275 g/L.
7. Floor Coatings: VOC not more than 50 g/L.
8. Shellacs, Clear: VOC not more than 730 g/L.
9. Shellacs, Pigmented: VOC not more than 550 g/L.
10. Primers, Sealers, and Undercoaters: VOC content of not more than 100 g/L.

C. Low-Emitting Materials: For field applications that are inside the weatherproofing system, 90 percent of paints and coatings shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

D. Colors: As indicated in finish schedule on the Drawings.

2.3 SOURCE QUALITY CONTROL

A. Testing of Coating Materials: Owner reserves the right to invoke the following procedure:
1. Owner will engage the services of a qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
2. Testing agency will perform tests for compliance with product requirements.
3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. Contractor will be required to remove rejected materials from previously coated surfaces if, on recoating with complying materials, the two coatings are incompatible.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
   1. Gypsum Board: 12 percent.

C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.

D. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.

E. Proceed with coating application only after unsatisfactory conditions have been corrected.
   1. Application of coating indicates acceptance of surfaces and conditions.
3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
   1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
   1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.

D. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer, but not less than SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning," except as follows:
   1. Items indicated as part of AESS Assembly: SSPC-SP 10/NACE No. 2, "Near-White Metal Blast Cleaning."

E. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

F. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied coatings.

3.3 APPLICATION

A. Apply high-performance coatings according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."
   1. Use applicators and techniques suited for coating and substrate indicated.
   2. Coat surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
   3. Coat backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
   4. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance.
D. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

3.4 FIELD QUALITY CONTROL

A. Dry Film Thickness Testing: District may engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.

1. Contractor shall touch up and restore coated surfaces damaged by testing.
2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades against damage from coating operation. Correct damage to work of other trades by cleaning, repairing, replacing, and recoating, as approved by Architect, and leave in an undamaged condition.

D. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.

3.6 EXTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Steel Substrates, Not shown to be Galvanized:

1. Refer to section 051200 - Structural Steel Framing for preparation, priming and for additional information regarding finishing of exterior exposed steel.
2. Pigmented Polyurethane over Epoxy Zinc-Rich Primer and High-Build Epoxy System MPI EXT 5.1G:
   a. Prime Coat: Primer, zinc rich, as recommended by finish coats manufacturer to suit conditions.
      1) AkzoNobel Devoe Bar-Rust 235 Multi-Purpose Epoxy Coating.
   c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6).
      1) AkzoNobel Devoe Devthane 379 Aliphatic Urethane Gloss Enamel

B. Galvanized-Metal Substrates:

1. Refer to section 051200 - Structural Steel Framing for preparation, priming, and for additional information regarding finishing of exterior galvanized steel.
2. Avoid applying primers to chromate passivated galvanized steel, unless otherwise directed by manufacturer.
3. Pigmented Polyurethane over Epoxy Primer System:
   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal, as recommended by finish coats manufacturer to suit conditions.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.
      1) AkzoNobel Devoe Devthane 379 Aliphatic Urethane Gloss Enamel

C. Non-Ferrous Metal Substrates:
   1. Pigmented Polyurethane over Vinyl Wash and Epoxy Primer System MPI EXT 5.3D:
      a. Vinyl Wash: Vinyl butyral/phosphoric acid primer wash coat, as recommended by finish coats manufacturer to suit condition.
      b. Prime Coat: Primer, epoxy, anti-corrosive, for metal, as recommended by finish coats manufacturer to suit condition. Intermediate Coat: Polyurethane, two component, pigmented, gloss matching topcoat.
      c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6), MPI #72.
         1) AkzoNobel Devoe Devthane 379 Aliphatic Urethane Gloss Enamel

3.7 INTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Steel Substrates:
   1. Refer to Section 051213 for preparation for Architecturally Exposed Structural Steel Framing.
   2. Pigmented Polyurethane over High-Build Epoxy System:
      a. Application: Decorative AESS metal stairs, and all interior steel railings and handrails.
      b. Prime Coat: Primer, epoxy, anti-corrosive, for metal, as recommended by finish coats manufacturer to suit conditions.
      c. Intermediate Coat: Epoxy, high build.
         1) AkzoNobel Devoe Bar-Rust 235 Multi-Purpose Epoxy Coating.
      d. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6).
         1) AkzoNobel Devoe Devthane 379 Aliphatic Urethane Gloss Enamel

3. Epoxy, Waterborne Over Rust-Inhibitive Primer:
   a. Application: Hollow metal doors and frames, and other steel where indicated.
   b. Prime Coat: Primer, rust-inhibitive, as recommended by finish coats manufacturer to suit conditions.
   d. Topcoat: Waterborne epoxy, gloss (MPI Gloss Level 6).
      1) AkzoNobel Devoe Tru-Glaze-WB 4438

B. Gypsum Board Substrates, Abuse-Resistant, Epoxy-Like:
   1. Acrylic Enamel Over Latex Sealer:
         1) Kelly-Moore 971 AcryPlex Interior PVA Primer/Sealer

c. Topcoat: Water-based 100-Percent Acrylic, egg-shell (MPI Gloss Level 3).
   1) Kelly-Moore 1686 DuraPoxy 100% Acrylic Interior Eggshell Enamel

END OF SECTION
SECTION 100413 - COMMON SUBMITTAL REQUIREMENTS FOR SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:
   1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.
   1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:
   1. Shop Drawings.
   2. Product Data.
   3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
   2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
   3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
   4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
      a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows.
   Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
   1. Refer to Section 01330 for quantity of days allowed for review.
   2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER'S AND GENERAL CONTRACTOR'S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect's staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:

1. Action Codes Permitting Use:
   a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
   b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
   c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect's notations and Contract Document requirements.
d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.

2. Action Code Prohibiting Use:
   a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
   a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. Informational Submittals: For Architect's information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

1. Action Code for Information Only:
   a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.
   1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.
   1. Submittal Numbering: See below.
   2. Contact Information: Full Name, Phone Number and Email Address.

B. Submittal Definition
   1. Each submittal consists of items from only ONE Specifications section.
2. **Complete Submittal:** If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.

3. **Partial Submittals:** If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).

4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.

### C. Submittal Numbering

1. Number submittals as described below to assist tracking.
2. Number each submittal in the format nnnnnn-nn.

   a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.

   b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.

   c. **P-Number for Partial Submittals:** Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.

   d. **R-Number for Re-submittals:** Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.

   e. **Examples:**

### 3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS

A. **Provide Submittal Review Sheet in PDF format.** Submit as the page after the Submittal Transmittal.

B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:

   1. **Submittal Number:** See Submittal Numbering in Submittal Transmittal Requirements paragraph.

D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

**END OF SECTION**
SECTION 101100 - VISUAL DISPLAY UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Porcelain-enamel markerboards.
   2. Glass markerboards.
   3. Sliding visual display assemblies.
   4. Interactive projection boards.

B. Related Requirements:
   1. Section 01030 "Alternates" for information affecting this Section.
   2. Section 092216 "Non-Structural Metal Framing" for sheet metal reinforcement in wall for mounting of visual display units.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, finishes, and accessories for visual display units.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For visual display units.
   1. Include plans, elevations, sections, details, wall reinforcement, and attachment to other work.
   2. Show locations of panel joints. Show locations of field-assembled joints for factory-fabricated units too large to ship in one piece.
   3. Include sections of typical trim members.

D. Samples for Verification: For each type of visual display unit indicated.
   1. Visual Display Panel: Not less than 8-1/2 by 11 inches, with facing, core, and backing indicated for final Work. Include one panel for each type, color, and texture required.
   2. Trim: 6-inch- long sections of each trim profile.
   3. Display Rail: 6-inch- long section of each type.
   4. Accessories: Full-size Sample of each type of accessory.

E. Product Schedule: For visual display units. Use same designations indicated on Drawings.
1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For visual display units[ and motorized units] to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Provide the following upon request:
   1. Qualification Data: For qualified Installer.
   2. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for surface-burning characteristics of tackboard materials.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
   1. Build mockup of each type of visual display unit as shown on Drawings. Include accessories.
   2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
   3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver factory-fabricated visual display units completely assembled in one piece. If dimensions exceed maximum manufactured unit size, or if unit size is impracticable to ship in one piece, provide two or more pieces with joints in locations indicated on approved Shop Drawings.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install visual display units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

B. Field Measurements: Verify actual dimensions of construction contiguous with visual display units by field measurements before fabrication.
   1. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.

1.8 WARRANTY

A. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
a. Surfaces lose original writing and erasing qualities.

b. Surfaces exhibit crazing, cracking, or flaking.

2. Warranty Period: 50 years from date of Substantial Completion.

B. Special Warranty for Interactive Projector Boards: Manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Surfaces lose original writing and erasing qualities.
   b. Surfaces exhibit crazing, cracking, or flaking.
   c. Flatness deviation greater than 2mm across face of board.

2. Warranty Period: 50 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain each type of visual display unit from single source from single manufacturer.

2.2 PORCELAIN-ENAMEL MARKERBOARDS (WHITE BOARDS)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Best-Rite Manufacturing; a brand division of MooreCo, Inc.
   2. Claridge Products and Equipment, Inc.

B. Visual Display Board Assembly: Field or factory fabricated.
   1. Assembly: Porcelain-enamel markerboard.
   2. Corners: Square.
   3. Width: As indicated on Drawings.
   4. Height: As indicated on Drawings.
   5. Mounting Method: Direct to wall.

C. Porcelain-Enamel Markerboard Panels: Balanced, high-pressure, factory-laminated markerboard assembly of three-ply construction, consisting of moisture-barrier backing, core material, and porcelain-enamel face sheet with low-gloss finish. Laminate panels under heat and pressure with manufacturer's standard, flexible waterproof adhesive.
   1. Face Sheet Thickness: 0.021 inch uncoated base metal thickness.
   2. Hardboard Core: 1/4 inch thick; with 0.005-inch- thick, aluminum foil backing.
   3. Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.

D. Tackboard Panel: Natural-cork or Plastic-impregnated-cork tackboard panel on core indicated.
   1. Color and Pattern: As selected by Architect from full range of industry colors.
E. Aluminum Frames and Trim: Fabricated from not less than 0.062-inch-thick, extruded aluminum; standard size and shape.
   1. Field-Applied Trim: Manufacturer's standard, snap-on trim with no visible screws or exposed joints.

F. Mounting: Manufacturer's standard z-clip mounting system, or comparable as approved by Architect.

G. Markertray: Manufacturer's standard; continuous.
   1. Box Type: Extruded aluminum with slanted front, grooved tray, and cast-aluminum end closures.

H. Display Rail: Manufacturer's standard, extruded-aluminum display rail with insert, end stops, designed to hold accessories.
   1. Size: 2 inches high by full length of visual display unit.
   2. Map Hooks and Clips: Two map hooks with flexible metal clips for every 48 inches of display rail or fraction thereof.
   3. Tackboard Insert Color: As selected by Architect from full range of industry colors.

I. Paper Holder Display Rail: Extruded aluminum; designed to hold paper by clamping action.

2.3 GLASS MARKERBOARDS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Products by Clarus Glassboards, LLC., or comparable product by one of the following:
   1. Best-Rite Manufacturing; A brand division of MooreCo, Inc.
   2. Claridge Products and Equipment, Inc.

B. Glass Markerboards: 6-mm tempered glass markerboard, with smooth polished edge and eased corners; color coated on back surface.

C. Mounting: Round, stainless-steel standoffs, holding glass approximately 1 inch from wall surface; mounted through holes in markerboard.

D. Color and Surface: Matte white.

E. Markertray: Glass, supported by stainless-steel clips.

F. Size: As indicated.

2.4 SLIDING VISUAL DISPLAY UNITS

A. Alternates: Refer to Section 01030 "Alternates" for information effecting this Section.

B. Bottom-Supported, Horizontal-Sliding Visual Display Units: Factory-fabricated units consisting of extruded-aluminum tubular frame, fixed rear visual display panel, aluminum-framed horizontal-sliding visual display panels, and extruded-aluminum fascia that conceals overhead sliding track; designed for recessed mounting. Provide panels that operate smoothly without vibration or chatter.
1. Products: Subject to compliance with requirements, provide products as manufactured by one of the following:
   a. Best-Rite Manufacturing; A brand division of MooreCo, Inc.
   b. Claridge Products and Equipment, Inc.
   c. Platinum Visual Systems; a division of ABC School Equipment, Inc.

2. Panel Configuration: Provide panels in the following configurations as indicated:
   a. Two-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide two sliding panels, each equal size.

3. Top Track: One-piece track with integral fascia.

4. Bottom Track: One-piece bottom track with integral marker tray.

5. Hardware: Manufacturer's standard, extruded-aluminum overhead track and channel-shaped bottom guides; with minimum of two nylon ball-bearing carriers and two nylon rollers for each sliding panel (three carriers and rollers for panels over 96-inches long).

6. Overall Width: As indicated on Drawings.

7. Overall Height: As indicated on Drawings.

C. Panels and Accessories:
   1. Sliding Markerboard Panel: Porcelain-enamel-faced markerboard panel on 1/2-inch honeycomb core.
   2. Fixed Rear Markerboard Panel: Porcelain-enamel-faced markerboard panel on 1/2-inch honeycomb core.
   3. Backing Material: 0.015-inch thick, aluminum backing sheet.
   5. Aluminum Trim: Factory applied; in manufacturer's standard size and profile; with clear anodic finish.
   6. Mounting style: Wall mount and counter mount as indicated.

2.5 INTERACTIVE PROJECTION BOARDS

A. Description: Ultra-flat glass magnetic marker and projection board for use with interactive projector. Wall mounted and mobile units as indicated.

B. Basis-of-Design Product: Subject to compliance with requirements, provide Interactive Projector Boards as manufactured by MooreCo, Inc., or comparable by the following:

C. Characteristics:
   1. Size: 60 inch by 96 inch
   2. Trim: Clear anodized aluminum.
   3. Flatness: Not more than 2 mm across face of board.

D. Accessories: Include mounting brackets, fasteners, and accessories required for complete installation.
2.6 MATERIALS

A. Porcelain-Enamel Face Sheet: PEI-1002, with face sheet manufacturer’s standard two- or three-coat process.

B. Natural-Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish with surface-burning characteristics indicated.

C. Plastic-Impregnated-Cork Sheet: Seamless, homogeneous, self-sealing sheet consisting of granulated cork, linseed oil, resin binders, and dry pigments that are mixed and calendared onto fabric backing; with washable vinyl finish and integral color throughout with surface-burning characteristics indicated.

D. Hardboard: ANSI A135.4, tempered.

E. Clear Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering.

F. Extruded Aluminum: ASTM B 221, Alloy 6063.

G. Adhesives for Field Application: Mildew-resistant, nonstaining adhesive for use with specific type of panels, sheets, or assemblies; and for substrate application; as recommended in writing by visual display unit manufacturer.
   1. Adhesives shall have a VOC content of 50 g/L or less.

H. Primer/Sealer: Mildew-resistant primer/sealer complying with requirements in Section 099123 "Interior Painting" and recommended in writing by visual display unit manufacturer for intended substrate.

2.7 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM’s "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 ALUMINUM FINISHES

A. Finish after fabrication.

B. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.

B. Examine roughing-in for electrical power systems to verify actual locations of connections before installation of motorized, sliding visual display units.

C. Examine walls and partitions for proper preparation and reinforcement backing for visual display units.

D. Examine walls and partitions for suitable framing depth where sliding visual display units will be installed.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Comply with manufacturer's written instructions for surface preparation.

B. Clean substrates of substances, such as dirt, mold, and mildew, that could impair the performance of and affect the smooth, finished surfaces of visual display boards.

C. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, projections, depressions, and substances that will impair bond between visual display units and wall surfaces.

D. Prime wall surfaces indicated to receive visual display units and as recommended in writing by primer/sealer manufacturer and visual display unit manufacturer.

3.3 INSTALLATION

A. General: Install visual display surfaces according to manufacturer's written instructions in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

B. Field-Assembled Visual Display Board Assemblies: Coordinate field-assembled units with grounds, trim, and accessories indicated. Join parts with a neat, precision fit.

1. Where size of visual display board assemblies or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturer's standard structural support accessories to suit conditions indicated.

C. Factory-Fabricated Visual Display Board Assemblies: Attach concealed clips, brackets, hangers, and grounds to wall surfaces and to visual display board assemblies with fasteners at not more than 16 inches o.c. Secure tops and bottoms of boards to walls.
D. Visual Display Board Assembly Mounting Heights: Install visual display units at mounting heights indicated on Drawings, or if not indicated, at heights indicated below.
   1. Mounting Height: 36 inches above finished floor to top of markertray or bottom of board as applicable.

E. Sliding Visual Display Units: Install units at mounting heights indicated. Attach to wall framing with fasteners at not more than 16 inches o.c.
   1. Integrate with custom architectural casework as indicated.
   2. Adjust panels to operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

3.4 CLEANING AND PROTECTION

A. Clean visual display units according to manufacturer's written instructions. Attach one removable cleaning instructions label to visual display unit in each room.

B. Touch up factory-applied finishes to restore damaged or soiled areas.

C. Cover and protect visual display units after installation and cleaning.

D. Remove protective film prior to final inspection.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train District's maintenance personnel to adjust, operate, and maintain interactive visual display units.

END OF SECTION
SECTION 101200 - DISPLAY CASES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Display cases.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for display cases. Include furnished specialties and accessories.
   2. Include electrical characteristics for illuminated display cases.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For display cases.
   1. Include plans, elevations, sections, and attachment details.
   2. Show location of seams and joints in tackboard panels.
   3. Include sections of typical trim members.
   4. Include diagrams for wiring of illuminated display cases.

D. Samples: For each exposed product and for each color and texture specified; not less than 8-1/2 by 11 inches for tackboard panels and 6 inches long for trim with factory finish.

E. Samples for Initial Selection: For each type of exposed finish.
   1. Include Samples of tackboard panels and factory-finished trim involving color finish selection.

F. Samples for Verification: For each type of exposed finish for the following.
   1. Tackboard Panel: Not less than 8-1/2 by 11 inches, with facing and substrate indicated for final Work. Include one panel for each type, color, and texture required.
   2. Trim: 6-inch-long sections of each trim profile.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For display cases to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Provide the following upon request:
   1. Product Test Reports: For tackboard panels, for tests performed by a qualified testing agency.
1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install display cases for indoor installations until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

B. Field Measurements: Verify actual dimensions of openings for display cases by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain display cases from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: 25 or less.
   2. Smoke-Developed Index: 450 or less.

B. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 DISPLAY CASE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Best-Rite; MooreCo, Inc.
   2. Claridge Products and Equipment, Inc.
   3. Ghent Manufacturing, Inc.
   5. Poblocki Sign Company.

B. Recessed Display Case: Factory-fabricated display case; with finished interior, and glazed doors at front.
   1. Construction: Aluminum frame with glazed top, and side panels.
   2. Aluminum Finish: Clear anodized

C. Glazed Hinged Doors: Tempered glass; set in frame matching cabinet material and finish. Equip each door with full-height continuous hinge and cylinder lock with two keys.
   1. Thickness: Not less than 6 mm thick.
   2. Number of Doors: Two or Three depending on configuration.

D. Shelves: 6-mm-thick tempered glass; supported on adjustable shelf standards and supports.
   1. Shelf Depth: 8 inches.
2. Number of Shelves: Three.

E. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; with shelf rests, B04081; mounted on sides. Provide standards extending full height of display case.

F. Back Panel: Natural-cork tackboard panel.
   1. Color: As selected by Architect from manufacturer's full range.

G. Illumination System: Concealed top-lighting system consisting of fluorescent-strip fixtures. Include lamps and internal wiring with single concealed electrical connection to building system. Coordinate electrical characteristics with power supply provided.
   1. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label.

H. Size: Width and configuration as indicated on Drawings by 60 inches high, by 8 inches deep.

2.4 TACKBOARD PANELS

A. Natural-Cork Tackboard Panel: 1/4-inch-thick, natural-cork sheet factory laminated to 1/4-inch-thick hardboard or particleboard backing.

2.5 MATERIALS

A. Hardboard: ANSI A135.4, tempered.

B. Fiberboard: ASTM C 208.

C. Particleboard: ANSI A208.1, Grade M-1, made with binder containing no urea formaldehyde.

D. Hardwood Plywood: HPVA HP-1, made with adhesive containing no urea formaldehyde.

E. Natural-Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish.

F. Extruded-Aluminum Bars and Shapes: ASTM B 221, Alloy 6063.

G. Aluminum Tubing: ASTM B 429/B 429M, Alloy 6063.

H. Clear Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering.

I. Fasteners: Provide screws, bolts, and other fastening devices made from same material as items being fastened, except provide hot-dip galvanized, stainless-steel, or aluminum fasteners for exterior applications. Provide types, sizes, and lengths to suit installation conditions. Use security fasteners where exposed to view.
2.6 FABRICATION

A. Fabricate display cases to requirements indicated for dimensions, design, and thickness and finish of materials. Configure end-to-end continuous cases as required to meet structural standards.

B. Use metals and shapes of thickness and reinforcing required to produce flat surfaces, and to impart strength for size, design, and application indicated.

C. Fabricate cabinets and door frames with reinforced corners, mitered to a hairline fit, with no exposed fasteners.

D. Fabricate shelf standards plumb and at heights to align shelf brackets for level shelves.

2.7 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 ALUMINUM FINISHES

A. Finish after fabrication.

B. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine walls, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.

B. Examine roughing-in for electrical power systems to verify actual locations of connections before installation of illuminated units.

C. Examine walls and partitions for proper backing for display cases.

D. Examine walls and partitions for suitable framing depth if recessed units will be installed.

E. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 PREPARATION

A. Prepare recesses for display cases as required by type and size of unit.

3.3 INSTALLATION

A. General: Install units in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

1. Mounting Height: 72 inches above finished floor to top of cabinet.

B. Recessed Display Cases: Attach units to wall framing with fasteners at not more than 16 inches (400 mm) o.c. Attach aluminum trim over edges of recessed display cases and conceal grounds and clips. Attach trim with fasteners at not more than 24 inches o.c.

C. Comply with requirements specified elsewhere for connecting illuminated display cases.

D. Install display case shelving level and straight.

3.4 ADJUSTING AND CLEANING

A. Adjust doors to operate smoothly without warp or bind and so contact points meet accurately. Lubricate operating hardware as recommended by manufacturer.

B. Cover and protect display cases after installation and cleaning.

C. Remove protective film prior to final inspection.

END OF SECTION
SECTION 101419 - DIMENSIONAL LETTER SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY
   A. Section Includes:
      1. Cast dimensional characters.
      2. Cutout dimensional characters.
      3. Fabricated channel dimensional characters.
      4. Illuminated, fabricated channel dimensional characters.

1.2 DEFINITIONS
   A. Illuminated: Illuminated by lighting source integrally constructed as part of the sign unit.

1.3 COORDINATION
   A. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.4 ACTION SUBMITTALS
   A. Product Data: For each type of product.
   B. Sustainable Design Submittals required by Section 01813 applicable to this Section.
   C. Shop Drawings: For signs.
      1. Include fabrication and installation details and attachments to other work.
      2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
      3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.
      4. Show locations of electrical service connections.
      5. Include diagrams for power, signal, and control wiring.
   D. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
      1. Include representative Samples of available typestyles and graphic symbols.
   E. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
      1. Dimensional Characters: Half-size Sample of each type of dimensional character.
      2. Exposed Accessories: Full-size Sample of each accessory type.
      3. Full-size Samples, if approved, will be returned to Contractor for use in the Project.
   F. Product Schedule: For dimensional letter signs. Use same designations indicated on Drawings or specified.
G. Delegated-Design Submittal: For signs indicated in "Performance Requirements" Article.
   1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For signs to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer of products or An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Provide the following upon request:
   1. Qualification Data: For Installer.

1.7 FIELD CONDITIONS

A. Field Measurements: Verify locations of electrical service embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Deterioration of finishes beyond normal weathering.
      b. Separation or delamination of sheet materials and components.
   2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design sign structure, mounting, and anchorage of dimensional character sign type(s) according to structural performance requirements.

B. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.
   1. Uniform Wind and Seismic Loads: As indicated on Drawings.
   2. Concentrated Horizontal Load: As indicated on Drawings.
   3. Other Design Load: As indicated on Drawings.
   4. Uniform and concentrated loads need not be assumed to act concurrently.
C. Thermal Movements: For exterior fabricated channel dimensional characters, allow for thermal movements from ambient and surface temperature changes.
   1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 DIMENSIONAL CHARACTERS

A. Cast Characters: Characters with uniform faces, sharp corners, and precisely formed lines and profiles, and as follows:
   2. Material Thickness: Manufacturer's standard for size of character.
   3. Character Height: As indicated on Drawings.
   4. Finishes:
      a. Integral Aluminum Finish: Clear anodized.
   5. Mounting: Ceiling hung; manufacturer's standard for size and design of character.

B. Cutout Characters: Characters with uniform faces; square-cut, smooth, eased edges; precisely formed lines and profiles; and as follows:
   1. Character Material: Sheet or plate aluminum.
   2. Material Thickness: Manufacturer's standard for size of character.
   3. Character Height: As indicated on Drawings.
   4. Finishes:
      a. Integral Aluminum Finish: Clear anodized.
   5. Mounting: Ceiling hung; manufacturer's standard for size and design of character.

C. Fabricated Channel Characters: Metal face and side returns, formed free from warp and distortion; with uniform faces, sharp corners, and precisely formed lines and profiles; internally braced for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners; and as follows.
   1. Illuminated Characters: Backlighted character construction with LED lighting, including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from character surfaces as needed to illuminate evenly.
      a. Power: As indicated on electrical Drawings.
      b. Weeps: Provide weep holes to drain water at lowest part of exterior characters. Equip weeps with permanent baffles to block light leakage without inhibiting drainage.
   2. Character Material: Sheet or plate aluminum.
   3. Material Thickness: Manufacturer's standard for size and design of character.
   4. Character Height: As indicated on Drawings.
   5. Character Depth: As indicated on Drawings.
   6. Finishes:
      a. Integral Aluminum Finish: Clear anodized.
   7. Mounting: Wall mounted; manufacturer's standard for size and design of character.
      a. Hold characters at manufacturer's recommended distance from wall surface.
2.3 DIMENSIONAL CHARACTER MATERIALS

A. Aluminum Castings: ASTM B 26/B 26M, alloy and temper recommended by sign manufacturer for casting process used and for type of use and finish indicated.

B. Aluminum Sheet and Plate: ASTM B 209, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

C. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

D. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signage, noncorrosive and compatible with each material joined, and complying with the following:
   1. Use concealed fasteners and anchors unless indicated to be exposed.

B. Exposed Metal-Fastener Components, General:
   1. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
      a. Fastener Heads: For nonstructural connections, use flathead or oval countersunk screws and bolts with tamper-resistant Allen-head or one-way-head slots unless otherwise indicated.

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.5 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
   1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
   2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
   3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
   4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
   5. Internally brace signs for stability and for securing fasteners.
   6. Provide rebates, lugs, and brackets necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.
7. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.

B. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted signs to suit sign construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.

2.6 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.7 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.

C. Verify that electrical service is correctly sized and located to accommodate signs.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.

2. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.

3. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
B. Mounting Methods:
   1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
      a. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.
   2. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
      a. Thin or Hollow Surfaces: Place spacers on studs, place sign in position with spacers pinched between sign and substrate, and install washers and nuts on stud ends projecting through opposite side of surface, and tighten.
   3. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.
   4. Back Bar and Brackets: Remove loose debris from substrate surface and install backbar or bracket supports in position, so that signage is correctly located and aligned.

3.3 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed characters and signs that do not comply with specified requirements. Replace characters with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

B. Remove temporary protective coverings and strippable films as signs are installed.

C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.
SECTION 101423 - SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. General signage requirements for the following:
      a. Accessibility signage
      b. Toilet room signage
      c. LEED-required signage.
      d. Emergency, directional, exit signage, and other code-related signage.

B. Related Requirements:
   1. Section 015000 "Temporary Facilities and Controls" for temporary Project identification signs and for temporary information and directional signs.
   2. Division 14 for "Elevator" Section for code-required conveying equipment signage.
   3. Division 22 Section for "Identification for Plumbing Piping and Equipment" for labels, tags, and nameplates for plumbing systems and equipment.
   4. Division 23 Section for "Identification for HVAC Piping and Equipment" for labels, tags, and nameplates for HVAC systems and equipment.
   5. Division 26 Section for "Identification for Electrical Systems" for labels, tags, and nameplates for electrical equipment.
   6. Division 26 Section for "Interior Lighting" for illuminated, self-luminous, and photoluminescent exit sign units.

1.3 DEFINITIONS

A. Accessible: In accordance with the accessibility standard.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For panel signs.
   1. Include fabrication and installation details and attachments to other work.
   2. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.
   3. Show message list, typestyles, graphic elements, including raised characters and Braille, and layout for each sign at least half size.
D. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
   1. Room-Identification Signs: Full-size Sample.
   2. Variable Component Materials: Full-size Sample of each base material, character (letter, number, and graphic element) in each exposed color and finish not included in Samples above.
   3. Exposed Accessories: Full-size Sample of each accessory type.

E. Sign Schedule: Use same designations specified or indicated on Drawings or in a sign schedule.

1.5 CLOSEOUT SUBMITTALS
   A. Maintenance Data: For signs to include in maintenance manuals.

1.6 QUALITY ASSURANCE
   A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
   B. Provide the following upon request:
      1. Qualification Data: For Installer and manufacturer.

1.7 WARRANTY
   A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
      1. Failures include, but are not limited to, the following:
         a. Deterioration of finishes beyond normal weathering.
         b. Deterioration of embedded graphic image.
         c. Separation or delamination of sheet materials and components.
      2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PANEL SIGNS, GENERAL
   A. Regional Materials: Panel signs shall be manufactured within 100 miles of Project site.

2.2 PERFORMANCE REQUIREMENTS
   A. Accessibility Standard: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and CBC Title 24 Chapter 11B for signs.
2.3 SIGNS

A. Room-Identification Signs, Wayfinding, and Emergency Signs: Sign with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
   1. Basis-of-Design Product: Match District standards as provided by ASI Sign Systems, Inc.
   2. Mounting: Surface mounted to wall with two-face tape or hook-and-loop tape.
   3. Text and Typeface: Accessible raised characters and Braille. Finish raised characters to contrast with background color, and finish Braille to match background color.

B. Interior Corridor Super Graphics: Vinyl die cut letters, either self-adhered or adhesively applied. Images and text as indicated.

C. Entrance Signs, General:
   1. Building entrances that are accessible to and useable by physically handicapped persons shall be identified with at least one standard accessibility symbol sign and with additional directional signs as required, to be visible to persons along approaching pedestrian ways.
   2. Comply with CBC Section 11B-216.6.

D. Toilet Room Entry Signage:
   1. Provide geometric symbols as follows. Colors as selected.
   3. Women: 12-inch diameter circle with international symbol for women.
   4. Unisex: 12-inch diameter circle with 12-inch equilateral triangle.
   5. Comply with CBC Section 11B703.7.2.6, ADA Article 4.30.
   6. Provide sign with raised letters and Braille on the wall adjacent to the latch outside the door. Where there is no wall space on the latch side and at double leaf doors, provide sign on nearest adjacent wall. Comply with CBC Section 11B-703.4.2.
   7. Center symbols on door and signs on wall at a height of 60-inches above finished floor.

E. Emergency Exit at Elevator Signs:
   1. Sign Type: Panel with subsurface copy.
   2. Design: Pictorial sign of a standardized design indicating that in case of fire, the elevator will not operate and that exit stairways should be used.
   3. Provide one sign at each elevator lobby per floor. Mount sign directly above and centered on elevator call button plate.
   4. Comply with CBC Section 1007.10.

F. Tactile Stairwell Signs:
   1. Tactile floor design signs complying with CBC Section 1117B.5.1.1 shall be located at each floor level in enclosed stairways in buildings two or more stories in height to identify the floor level.
   2. Mount signs 60-inches above floor landing immediately adjacent to the door on the strike side unless otherwise approved by governing authorities.
   3. Signage shall comply with CBC Section 11B-705.

G. Stairway Floor Number Signs:
   1. Provide a minimum 18-inch x 12-inch sign at each floor landing in interior exit enclosures connecting more than three stories designating the floor level, the terminus of the top and bottom of the stair enclosure and the identification of the stair.
   2. Locate the sign 60-inches above the floor landing in a position that is readily visible when the doors are in the open and closed positions.
3. Comply with CBC Section 1022.9.

H. Area of Rescue Assistance Signage:

1. Each area of rescue assistance shall be identified by a sign which states "Area of Rescue Assistance" displaying the international symbol of accessibility. The sign shall be illuminated. Illumination levels shall be as required by ADA Appendix A40.30.8. Tactile signage complying with CBC Section 11B-703 shall be located at each door to an area of refuge. Comply with CBC Section 1007.6.5.

2. Provide a sign adjoining the two-way communication system with instructions on the use of the area under emergency conditions. Comply with CBC Section 1007.6.4.

I. Directional Signage:

1. Provide directional signage where indicated to clearly indicate the direction to areas of rescue assistance as required by ADA Article 4.3.11.5.

2. Signs shall comply with the general signage requirements of ADA Article 4.30.

J. Provide additional signs required by District and/or State of California and LEED requirements, including but not limited to the following:

1. "No Smoking Within 25 Feet of Main Entrances, Exits, Air Intakes and Operable Windows" mounted within 10 feet of opening at entrances and exits.

2. "No Smoking" on all entry doors mounted on the door. For glass, mount clear vinyl decal on inside of glass.

3. Provide signs with pictograph.

2.4 PANEL-SIGN MATERIALS

A. Aluminum Sheet and Plate: ASTM B 209, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

B. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

C. Steel Materials:

1. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, G90 coating, either commercial or forming steel.

2. Steel Sheet: Uncoated, cold-rolled, ASTM A 1008/A 1008M, commercial steel, Type B, exposed.

3. Steel Members Fabricated from Plate or Bar Stock: ASTM A 529/A 529M or ASTM A 572/A 572M, 42,000-psi minimum yield strength.

4. For steel exposed to view on completion, provide materials having flat, smooth surfaces without blemishes. Do not use materials whose surfaces exhibit pitting, seam marks, roller marks, rolled trade names, or roughness.

D. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 316, stretcher-leveled standard of flatness.

E. Acrylic Sheet: ASTM D 4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).

F. Polycarbonate Sheet: ASTM C 1349, Appendix X1, Type II (coated, mar-resistant, UV-stabilized polycarbonate), with coating on both sides.
G. Fiberglass Sheet: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.

H. PVC Sheet: Manufacturer's standard, UV-light stable, PVC plastic.

I. Plastic-Laminate Sheet: NEMA LD 3, general-purpose HGS grade, 0.048-inch nominal thickness.

J. Vinyl Film: UV-resistant vinyl film of nominal thickness indicated, with pressure-sensitive, permanent adhesive on back; die cut to form characters or images as indicated.

K. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.5 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signage, noncorrosive and compatible with each material joined, and complying with the following:
   1. For exterior exposure, furnish stainless-steel devices unless otherwise indicated.
   2. Exposed Metal-Fastener Components, General:
      a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
      b. Fastener Heads: For nonstructural connections, use screws and bolts with tamper-resistant spanner-head slots unless otherwise indicated.
   3. Sign Mounting Fasteners:
      a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material or screwed into back of sign assembly, unless otherwise indicated.
      b. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, installed in predrilled holes.
   4. Inserts: Furnish inserts to be set by other trades into concrete or masonry work.

B. Adhesives: As recommended by sign manufacturer and with a VOC content of 70 g/L or less for adhesives used inside the weatherproofing system and applied on-site when calculated according to 40 CFR 59, Subpart D (EPA Method 24)

C. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 0.045 inch thick, with adhesive on both sides.

D. Hook-and-Loop Tape: Manufacturer's standard two-part tape consisting of hooked part on sign back and looped side on mounting surface.

2.6 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
   1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
B. Surface-Engraved Graphics: Machine engrave characters and other graphic devices into panel surface indicated to produce precisely formed copy, incised to uniform depth.
   1. Engraved Opaque Acrylic Sheet: Fill engraved graphics with manufacturer's standard enamel.
   2. Engraved Plastic Laminate: Engrave through exposed face ply of plastic-laminate sheet to expose contrasting core ply.

C. Subsurface-Applied Graphics: Apply graphics to back face of clear face-sheet material to produce precisely formed image. Image shall be free of rough edges.

D. Subsurface-Engraved Graphics: Reverse engrave back face of clear face-sheet material. Fill resulting copy with manufacturer's standard background color coating over enamel-filled copy.

E. Applied Vinyl: Align vinyl film in final position and apply to surface. Firmly press film from the middle outward to obtain good bond without blisters or fishmouths.

F. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted signs to suit sign construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.
   1. Aluminum Brackets: Factory finish brackets with baked-enamel or powder-coat finish to match sign-background color color unless otherwise indicated.
   2. Stainless-Steel Brackets: Factory finish brackets with No. 4 finish unless otherwise indicated.

G. Signs with Changeable Message Capability: Fabricate signs to allow insertion of changeable messages as follows:
   1. For snap-in changeable inserts beneath removable face sheet, furnish one suction or other device to assist in removing face sheet. Furnish initial changeable insert. Subsequent changeable inserts are by . Furnish two blank inserts for each sign for District use.
   2. For slide-in changeable inserts, fabricate slot without burrs or constrictions that inhibit function. Furnish initial changeable insert. Furnish two blank inserts for each sign for District use.
   3. For frame to hold changeable sign panel, fabricate frame without burrs or constrictions that inhibit function. Furnish initial sign panel. Subsequent changeable sign panels are by District .

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of signage work.

B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.

C. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 INSTALLATION

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
   1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
   2. Install signs so they do not protrude or obstruct according to the accessibility standard.
   3. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.

B. Room-Identification Signs and Other Accessible Signage: Install in locations on walls as indicated and according to accessibility standard.

C. Mounting Methods:
   1. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position, and push to engage tape adhesive.
   2. Hook-and-Loop Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply sign component of two-part tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage; push to engage tape adhesive. Keep tape strips 0.250 inch away from edges to prevent visibility at sign edges when sign is initially installed or reinstalled. Apply substrate component of tape to substrate in locations aligning with tape on back of sign; push and rub well to fully engage tape adhesive to substrate.
   3. Shim-Plate Mounting: Provide 1/8-inch thick, concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other direct mounting methods are impractical. Attach plate with fasteners and anchors suitable for secure attachment to substrate. Attach signs to plate using <Insert mounting method> method specified above.

D. Signs Mounted on Glass: Provide opaque sheet matching sign material and finish onto opposite side of glass to conceal back of sign.

3.3 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

B. Remove temporary protective coverings and strippable films as signs are installed.

C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by District.

END OF SECTION
SECTION 102113.17 - PHENOLIC-CORE TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Phenolic-core toilet compartments configured as toilet enclosures.

B. Related Requirements:
   1. Section 092216 "Non-Structural Metal Framing" for plate metal reinforcing in wall.
   2. Section 102800 "Toilet, Bath, and Laundry Accessories" for toilet tissue dispensers, grab bars, and similar accessories mounted on toilet compartments.

1.3 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal and Samples submittal. Ensure compliance with requirements included in Section 100413.

B. Product Data: For each type of product, unless otherwise indicated.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for toilet compartments.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Shop Drawings: For toilet compartments.
   1. Include plans, elevations, sections, details, and attachment details.
   2. Show locations of cutouts for compartment-mounted toilet accessories.
   3. Show locations of centerlines of toilet fixtures.
   4. Show locations of floor drains.
   5. Show ceiling grid, ceiling-mounted items, and overhead support or bracing locations.

E. Samples for Verification: For the following products, in manufacturer's standard sizes unless otherwise indicated:
   1. Each type of material, color, and finish required for toilet compartments, prepared on 6-inch-sq Samples of same thickness and material indicated for Work.
   2. Each type of hardware and accessory.

F. Product Schedule: For toilet compartments, prepared by or under the supervision of supplier, detailing location and selected colors for toilet compartment material.
1.4 INFORMATIONAL SUBMITTALS
   A. Product Certificates: For each type of toilet compartment.

1.5 CLOSEOUT SUBMITTALS
   A. Maintenance Data: For toilet compartments to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS
   A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
      1. Door Hinges: One set of hinge(s) with associated fasteners.
      2. Latch and Keeper: One latch(es) and keeper(s) with associated fasteners.
      3. Door Bumper: One door bumper(s) with associated fasteners.
      4. Door Pull: One door pull(s) with associated fasteners.

1.7 PROJECT CONDITIONS
   A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS
   A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
      1. Flame-Spread Index: 25 or less.
      2. Smoke-Developed Index: 450 or less.
   B. Recycled Content of Phenolic-Core Panel: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
   C. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and CBC Title 24 for toilet compartments designated as accessible.

2.2 PHENOLIC-CORE TOILET COMPARTMENTS
   A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on the Drawings as manufactured by ASI Global Partitions, or comparable product by one of the following:
      1. Bobrick Toilet Partitions
      2. Bradley Corporation; Mills Partitions.
   B. Toilet-Enclosure Styles, as indicated:
1. TC-1: Floor anchored/Overhead braced.
2. TC-2: Ultimate privacy.

C. Door, Panel, and Pilaster Construction: Solid phenolic-core panel material with melamine facing on both sides fused to substrate during panel manufacture (not separately laminated), and with eased and polished edges, full height as indicated and no-sightline system. Provide minimum 3/4-inch- thick doors and pilasters and minimum 1/2-inch- thick panels.
   1. Heights: Standard heights as indicated, except as follows:
      a. Doors: From 1-inch above floor to 12-inches below ceiling.
      b. Panels between stalls: From 1-inch above floor to 1-inch below ceiling.
      c. Pilasters: From floor to ceiling.

D. Pilaster Shoes: Formed from stainless-steel sheet, not less than 0.031-inch nominal thickness and 3 inches high, finished to match hardware.

E. Brackets (Fittings):
   1. Full-Height (Continuous) Type: Manufacturer's standard design; stainless steel.

F. Phenolic-Panel Finish:
   1. Facing Sheet Finish: One or two colors and patterns in each room as indicated.
   2. Color and Pattern: As indicated by manufacturer's designations, with manufacturer's standard through-color core matching face sheet.
   3. Edge Color: Manufacturer's standard.

2.3 HARDWARE AND ACCESSORIES

A. Hardware and Accessories: Manufacturer's heavy-duty operating hardware and accessories.
   1. Hinges: Manufacturer's minimum 0.062-inch- thick stainless-steel paired, wrap-around, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees, allowing emergency access by lifting door. Mount with through-bolts.
   2. Latch and Keeper: Manufacturer's heavy-duty surface-mounted cast-stainless-steel, ADA-compliant sliding-type, lock/keeper latch unit designed to resist damage due to slamming, with combination rubber-faced door strike and keeper, and with provision for emergency access. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible. Mount with through-bolts.
   5. Door Pull: Manufacturer's heavy-duty cast-stainless-steel U-pull at out-swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible. Mount with through-bolts.

B. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless-steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel compatible with related materials.
2.4 MATERIALS
A. Stainless-Steel Sheet: ASTM A 666, Type 304, stretcher-leveled standard of flatness.
B. Stainless-Steel Castings: ASTM A 743/A 743M.

2.5 FABRICATION
A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories where required for attachment of toilet accessories.
B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
C. Door Size and Swings: Unless otherwise indicated, provide 24-inch wide in-swinging doors for standard toilet compartments and 36-inch wide out-swinging doors with a minimum 32-inch wide clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine areas and conditions, with Installer present, for compliance with requirements for fastening, support, alignment, operating clearances, and other conditions affecting performance of the Work.
   1. Confirm location and adequacy of blocking and supports required for installation.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION
A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.
   1. Maximum Clearances:
      a. Pilasters and Panels: 1/2 inch.
      b. Panels and Walls: 1 inch.
   2. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.
      a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
      b. Align brackets at pilasters with brackets at walls.
B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.
3.3 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

END OF SECTION
SECTION 102600 - WALL AND DOOR PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

   A. Section Includes:
      1. Wall guards.
      2. Corner guards.
      3. Impact-resistant wall coverings.

1.3 ACTION SUBMITTALS

   A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance
      Form may be submitted in lieu of required Product Data submittal and Samples submittal.
      Ensure compliance with requirements included in Section 100413.
   
   B. Product Data: Include construction details, material descriptions, impact strength,
      fire-test-response characteristics, dimensions of individual components and profiles, and
      finishes for each impact-resistant wall protection unit.
   
   C. Sustainable Design Submittals required by Section 01813 applicable to this Section.
   
   D. Shop Drawings: For each impact-resistant wall protection unit showing locations and extent.
      Include sections, details, and attachments to other work.
   
   E. Samples for Verification: For each type of exposed finish required, prepared on Samples of
      size indicated below.
      1. Wall and Corner Guards: 12 inches long. Include examples of joinery, corners, end
         caps, and field splices.
      2. Impact-Resistant Wall Covering: 6 by 6 inches square.

1.4 CLOSEOUT SUBMITTALS

   A. Maintenance Data: For each impact-resistant wall protection unit to include in maintenance
      manuals.
      1. Include recommended methods and frequency of maintenance for maintaining optimum
         condition of plastic covers under anticipated traffic and use conditions. Include
         precautions against using cleaning materials and methods that may be detrimental to
         plastic finishes and performance.
1.5 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer.

B. Source Limitations: Obtain impact-resistant wall protection units from single source from single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of impact-resistant wall protection units and are based on the specific system indicated. Refer to Section 014000 "Quality Requirements."

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

D. Surface-Burning Characteristics: Provide impact-resistant, plastic wall protection units with surface-burning characteristics as determined by testing identical products per ASTM E 84, NFPA 255, or UL 723 by UL or another qualified testing agency.

E. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and CBC Title 24 Chapter 11B.

F. Provide the following upon request:
   1. Qualification Data: For qualified Installer.
   2. Material Certificates: For each impact-resistant plastic material, from manufacturer.
   3. Material Test Reports: For each impact-resistant plastic material.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store impact-resistant wall protection units in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1. Maintain room temperature within storage area at not less than 70 deg F during the period plastic materials are stored.

2. Keep plastic sheet material out of direct sunlight.

3. Store plastic wall protection components for a minimum of 72 hours, or until plastic material attains a minimum room temperature of 70 deg F.
   a. Store corner-guard covers in a vertical position.
   b. Store wall-guard covers in a horizontal position.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install impact-resistant wall protection units until building is enclosed and weatherproof, wet work is complete and dry, and HVAC system is operating and maintaining temperature at 70 deg F for not less than 72 hours before beginning installation and for the remainder of the construction period.
PART 2 - PRODUCTS

2.1 MATERIALS

A. PVC-Free Plastic: An engineered PETG that is free of PVC, phthalates, persistent bioaccumulative toxins (PBT) and bisphenol A (BPA) with UL® Class A/1 fire rating.

B. Aluminum Extrusions: Alloy and temper recommended by manufacturer for type of use and finish indicated, but with not less than strength and durability properties specified in ASTM B 221 for Alloy 6063-T5.

C. Stainless-Steel Sheet: ASTM A 240/A 240M.

D. Fasteners: Aluminum, nonmagnetic stainless-steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with items being fastened. Use security-type fasteners where exposed to view.

E. Adhesive: As recommended by impact-resistant plastic wall protection manufacturer and with a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.2 WALL GUARDS

A. Chair Rail, Type CR-1: Heavy-duty assembly consisting of continuous snap-on plastic cover installed over concealed retainer system; designed to withstand impacts.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Model C800 as manufactured by Korogard Wall Protection Systems, or comparable product by the following:
   a. Construction Specialties, Inc
   b. IPC Door and Wall Protection Systems; Division of InPro Corporation.

2. Cover: Extruded rigid PVC-free plastic, minimum 0.100-inch wall thickness; as follows:
   a. Profile: Flat.
      1) Dimensions: Nominal 8 inches high by 1-1/4 inch deep.
      2) Surface: Uniform.
   b. Color and Texture: As indicated by manufacturer's designations.

3. Continuous Retainer: Minimum 0.080-inch thick, one-piece, extruded aluminum.

5. End Caps and Corners: Prefabricated, injection-molded plastic; matching color cover; field adjustable for close alignment with snap-on cover.

6. Mounting: Surface mounted directly to wall.

2.3 CORNER GUARDS

A. Surface-Mounted, Metal Corner Guards, Type CG-1: Fabricated from one-piece, formed or extruded metal with formed edges; with 90- or 135-degree turn to match wall condition.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Balco, Inc.
   b. Construction Specialties, Inc.
   c. IPC Door and Wall Protection Systems; Division of InPro Corporation.
   d. Korogard Wall Protection Systems; a division of RJF International Corporation.

2. Material: Stainless steel, Type 304.
   a. Thickness: Minimum 16-gauge.
   b. Finish: Directional satin, No. 4.

3. Wing Size: Nominal 3-1/2 by 3-1/2 inches.

5. Mounting: Double-faced, adhesive foam tape or Adhesive.

2.4 END-WALL GUARDS

A. Surface-Mounted, Metal, End-Wall Guards: Fabricated from one-piece, formed or extruded metal that covers entire end of wall; with formed edges.
   1. Manufacturers: Subject to compliance with requirements, match corner guards.
   2. Material: Stainless steel, Type 304.
      a. Thickness: Minimum 16-gauge.
      b. Finish: Directional satin, No. 4.

4. Mounting: Double-faced, adhesive foam tape or Adhesive.

2.5 IMPACT-RESISTANT WALL COVERINGS

A. Impact-Resistant Sheet Wall Covering: Fabricated from plastic sheet wall-covering material.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide PVC-free Acrovyn products by Construction Specialties, Inc., or comparable product by the following:
      a. IPC Door and Wall Protection Systems; Division of InPro Corporation.
   2. Sheet Thickness: 0.080 inch.
   3. Color and Texture: As selected by Architect from manufacturer's full range.
   4. Height: As indicated.
   5. Trim and Joint Moldings: Extruded rigid plastic that matches sheet wall covering color.

2.6 FABRICATION

A. Fabricate impact-resistant wall protection units to comply with requirements indicated for design, dimensions, and member sizes, including thicknesses of components.

B. Assemble components in factory to greatest extent possible to minimize field assembly. Disassemble only as necessary for shipping and handling.
C. Fabricate components with tight seams and joints with exposed edges rolled. Provide surfaces free of wrinkles, chips, dents, uneven coloration, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.

2.7 METAL FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
   1. Remove tool and die marks and stretch lines, or blend into finish.
   2. Grind and polish surfaces to produce uniform finish, free of cross scratches.
   3. Run grain of directional finishes with long dimension of each piece.
   4. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

B. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and wall areas, with Installer present, for compliance with requirements for installation tolerances, fire rating, and other conditions affecting performance of work.

B. Examine walls to which impact-resistant wall protection will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.
   1. For impact-resistant wall protection units attached with adhesive or foam tape, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Complete finishing operations, including painting, before installing impact-resistant wall protection system components.

B. Before installation, clean substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

A. General: Install impact-resistant wall protection units level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.
   1. Install impact-resistant wall protection units in locations and at mounting heights indicated on Drawings or, if not indicated, at heights indicated below:
      a. Crash Rails: Top at 40-inches above finished floor.
b. Corner and end-wall guards: Mount bottom above wall base to height indicated.
c. Hold back end caps of wall guards 1-inch from door frames where occurs.

2. Provide splices, mounting hardware, anchors, and other accessories required for a complete installation.
   a. Provide anchoring devices to withstand imposed loads.
   b. Where splices occur in horizontal runs of more than 20 feet, splice aluminum retainers and plastic covers at different locations along the run, but no closer than 12 inches.
   c. Adjust end caps as required to ensure tight seams.

B. Impact-Resistant Wall Covering: Install top and edge moldings, corners, and divider bars as required for a complete installation.

3.4 CLEANING

A. Immediately after completion of installation, clean plastic covers and accessories using a standard, ammonia-based, household cleaning agent.

B. Remove excess adhesive using methods and materials recommended in writing by manufacturer.

END OF SECTION
SECTION 102800 - TOILET, BATH AND MISCELLANEOUS ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Public-use washroom accessories.
      2. Childcare accessories.
      3. Underlavatory guards.
      5. Miscellaneous accessories.
   B. Related Requirements:
      1. Section 088300 "Mirrors" for frameless mirrors.

1.3 COORDINATION
   A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
   B. Coordinate accessory locations with in-wall reinforcing.

1.4 ACTION SUBMITTALS
   A. Product Data: For each type of product.
      1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
      2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
      3. Include electrical characteristics.
   B. Sustainable Design Submittals required by Section 01813 applicable to this Section.
   C. Samples: Full size, for each exposed product and for each finish specified.
      1. Approved full-size Samples will be returned and may be used in the Work.
   D. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
      1. Identify locations using room designations indicated.
      2. Identify accessories using designations indicated.
1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For accessories to include in maintenance manuals.

1.6 WARRANTY

A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, visible silver spoilage defects.
   2. Warranty Period: 15 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 OWNER-FURNISHED MATERIALS

A. Owner-Furnished, Contractor-Installed Materials: Soap dispenser, paper-towel dispenser.
   1. Soap Dispenser - GOJO Products; Model ADX-12 Dispenser; Grey
   2. Paper Towel Dispenser - Kimberly Clark; Model 09765 in-Sight Lev-r-Matic Roll Towel Dispenser; Smoke Grey

2.2 PUBLIC-USE WASHROOM ACCESSORIES

A. Source Limitations: Obtain public-use washroom accessories from single source from single manufacturer.

B. Standard Requirements: Standard finish for washroom accessories shall be brushed stainless steel, unless otherwise indicated. Provide keyed locks and standard mounting fasteners.

C. Basis-of-Design Product: Subject to compliance with requirements, provide listed product as manufactured by Bobrick Washroom Equipment, Inc., or comparable products by one of the following:
   1. A&J Washroom Accessories, Inc.

D. Toilet Tissue (Roll) Dispenser, Type TPD1:
      a. Description: Double-roll dispenser
      b. Mounting: Surface mounted, partition.
      c. Description: Double-roll dispenser

E. Combination Toilet Tissue Dispenser, Type TPD2:
      a. Description: Combination unit with double-roll toilet tissue dispenser and the following:
         1) Removable sanitary-napkin waste receptacle with self-closing, disposal-opening cover.
         2) Seat-cover dispenser with minimum capacity of 250 seat covers.
b. Mounting: Surface mounted, partition.

F. Combination Toilet Tissue Dispenser, Type TPD3:
      a. Description: Combination unit with double-roll toilet tissue dispenser and the following:
         1) Removable sanitary-napkin waste receptacle with self-closing, disposal-opening cover.
         2) Seat-cover dispenser with minimum capacity of 250 seat covers.
      b. Mounting: Partition mounted, dual access with two tissue rolls per compartment.

G. Grab Bar, Type GB1:
   1. Basis-of-Design Product: Bobrick B-6806-48
         b. Material: Stainless steel, 18-gauge, minimum.
            1) Finish: Smooth, No. 4 finish (satin).
      c. Outside Diameter: 1-1/2 inches.
      d. Configuration and Length: Straight, 48 inches long.

H. Grab Bar, Type GB2:
         b. Material: Stainless steel, 18-gauge, minimum.
            1) Finish: Smooth, No. 4 finish (satin).
      c. Outside Diameter: 1-1/2 inches.
      d. Configuration and Length: Straight, 36 inches long.

I. Sanitary-Napkin Disposal Unit, Type SND:
   1. Basis-of-Design Product: Bobrick B-270
      a. Mounting: Surface mounted.
         b. Cover: One-piece, seamless with continuous hinge.
         c. Receptacle: Removable

J. Seat-Cover Dispenser, Type SCD:
   1. Basis-of-Design Product: Bobrick B-221
      a. Mounting: Surface mounted.

K. Mirror Unit, Type M-1:
   1. Basis-of-Design Product: Bobrick B-165 1836
      a. Frame: Stainless-steel channel, 18-gauge.
         1) Corners: Welded and ground smooth.
         2) Finish: Bright polished.
1) One-piece, galvanized-steel, wall-hanger device.
2) Wall bracket of galvanized steel, equipped with concealed locking devices requiring a special tool to remove.

c. Size: 18 inches by 36 inches.

L. Coat Hook, Type CH:
   1. Basis-of-Design Product: B-212
      a. Description: Single-prong unit with rubber bumper.

M. Waste Receptacle, Type WR:
   1. Basis-of-Design Product: Bobrick B-3644
      a. Mounting: Open top, recessed.
      b. Minimum Capacity: 12 gallon (L).
      c. Liner: Reusable vinyl liner.

2.3 CHILDCARE ACCESSORIES

A. Source Limitations: Obtain childcare accessories from single source from single manufacturer.

B. Diaper-Changing Station, Type BCS: ASTM F 2285
   1. Basis-of-Design: Subject to compliance with requirements, provide Model KB110-SSRE as manufactured by Bobrick Washroom Equipment, Inc., or comparable by one of the following:
      b. Koala Kare Products.
   2. Description: Horizontal recessed unit that opens by folding down from stored position and with child-protection strap.
      a. Engineered to support minimum of 250-lb static load when opened.
   3. Mounting: Recessed mounted, flush wall with 4-inch recess depth.
   4. Operation: By pneumatic shock-absorbing mechanism, with continuous hinge.
   5. Material and Finish: 18-gauge, minimum, Type 304 stainless steel exterior with anti-microbial HDPE interior in manufacturer's standard color.

2.4 UNDERLAVATORY GUARDS

A. Underlavatory Guard:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Plumberex Specialty Products, Inc.
      b. Truebro by IPS Corporation.
   2. Description: Insulating pipe covering for supply and drain piping assemblies that prevents direct contact with and burns from piping; allow service access without removing coverings.
2.5 CUSTODIAL ACCESSORIES

A. Source Limitations: Obtain custodial accessories from single source from single manufacturer.

B. Basis-of-Design Product: Subject to compliance with requirements, provide listed product as manufactured by Bobrick Washroom Equipment, Inc., or comparable products by one of the following:
   1. A&J Washroom Accessories, Inc.

C. Mop and Broom Holder:
   1. Basis-of-Design Product: Bobrick B-239
      a. Description: Unit with shelf, hooks, holders, and rod suspended beneath shelf.
      b. Length: 34 inches.
      c. Hooks: Four.
      d. Mop/Broom Holders: Three, spring-loaded, rubber hat, cam type.

2.6 MISCELLANEOUS ACCESSORIES

A. Locate according to Drawings.

B. Products:
   2. AED device - ICE Safety Solutions; Philips HeartStart Onsite AED Model No. M5066A, with battery and wall mounted cabinet Model No. C1413F12.
   3. Evacuation Chair - Stryker Model No. 6254.

2.7 MATERIALS

A. Stainless Steel: ASTM A 666, Type 304, 18-gauge minimum nominal thickness unless otherwise indicated.

B. Galvanized-Steel Sheet: ASTM A 653/A 653M, with G60 hot-dip zinc coating.

D. Fasteners: Screws, bolts, and other devices of same material as accessory unit and tamper-and-theft resistant where exposed, and of galvanized steel where concealed.

E. Mirrors: ASTM C 1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

2.8 FABRICATION

A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
PART 3 - EXECUTION

3.1 INSTALLATION

A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.

B. Grab Bars: Install to withstand a downward load of at least 250 lbf, when tested according to ASTM F 446.

3.2 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.

B. Remove temporary labels and protective coatings.

C. Clean and polish exposed surfaces according to manufacturer's written instructions.

END OF SECTION
SECTION 104413 - FIRE PROTECTION CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Fire-protection cabinets for the following:
      a. Portable fire extinguishers.

B. Related Requirements:
   1. Section 104416 "Fire Extinguishers."

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Show door hardware, cabinet type, trim style, and panel style. Include roughing-in dimensions and details showing recessed-, semirecessed-, or surface-mounting method and relationships of box and trim to surrounding construction.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For fire-protection cabinets. Include plans, elevations, sections, details, and attachments to other work.

D. Samples: For each type of exposed finish required.

E. Product Schedule: For fire-protection cabinets. Indicate whether recessed, semirecessed, or surface mounted. Coordinate final fire-protection cabinet schedule with fire-extinguisher schedule to ensure proper fit and function.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For fire-protection cabinets to include in maintenance manuals.

1.5 COORDINATION

A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.

B. Coordinate sizes and locations of fire-protection cabinets with wall depths.
1.6  SEQUENCING

A. Apply vinyl lettering on field-painted fire-protection cabinets after painting is complete.

PART 2 - PRODUCTS

2.1  PERFORMANCE REQUIREMENTS

A. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements in ASTM E 814 for fire-resistance rating of walls where they are installed.

2.2  FIRE-PROTECTION CABINET

A. Cabinet Type: Suitable for fire extinguisher.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. JL Industries, Inc.; a division of the Activar Construction Products Group.
   b. Larsens Manufacturing Company.
   c. Nystrom, Inc.
   d. Potter Roemer LLC.
   e. Strike First Corporation of America.

B. Cabinet Construction: Nonrated, and non-rated where occurs.

1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.043-inch thick cold-rolled steel sheet lined with minimum 5/8-inch thick fire-barrier material. Provide factory-drilled mounting holes. Provide fire rating to match wall construction in which cabinet is installed.

C. Cabinet Material: Cold-rolled steel sheet.

1. Shelf: Same metal and finish as cabinet.

D. Cabinet Size: Size to fit extinguisher indicated or as required by authorities having jurisdiction.

E. Semirecessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).

1. Square-Edge Trim: 1-1/4- to 1-1/2-inch backbend depth.

F. Surface-Mounted Cabinet: Cabinet box fully exposed and mounted directly on wall with no trim.

G. Door Material: Steel sheet.

H. Door Style: Flush opaque panel, frameless, with no exposed hinges.

I. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.

1. Provide recessed door pull and friction latch.
2. Provide concealed hinge permitting door to open 180 degrees.
3. Latch to operate with 5 lb maximum force per CBC Title 24 Chapter 11B.
J. Accessories:
1. Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle.
2. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as directed by Architect.
   a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."
      1) Location: Applied to cabinet door.
      2) Application Process: Pressure-sensitive vinyl letters.
      3) Lettering Color: Black.
      4) Orientation: Vertical.

K. Materials:
1. Cold-Rolled Steel: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.
   b. Color: As selected by Architect from full range of industry colors and color densities.

2.3 GENERAL FINISH REQUIREMENTS
B. Protect mechanical finishes on exposed surfaces of fire-protection cabinets from damage by applying a strippable, temporary protective covering before shipping.
C. Finish fire-protection cabinets after assembly.
D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION
A. Examine walls and partitions for suitable framing depth and blocking where recessed and semirecessed cabinets will be installed.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION
A. Prepare recesses for recessed and semirecessed fire-protection cabinets as required by type and size of cabinet and trim style.
3.3 INSTALLATION

A. General: Install fire-protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

B. Fire-Protection Cabinets: Fasten cabinets to structure, square and plumb.
   1. Unless otherwise indicated, provide recessed fire-protection cabinets. If wall thickness is inadequate for recessed cabinets, provide semirecessed fire-protection cabinets.
   2. Provide inside latch and lock for break-glass panels.
   3. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.
   4. Fire-Rated Cabinets:
      a. Install cabinet with not more than 1/16-inch tolerance between pipe OD and knockout OD. Center pipe within knockout.
      b. Seal through penetrations with firestopping sealant as specified in Section 078413 "Penetration Firestopping."

C. Identification: Apply vinyl lettering at locations indicated.

3.4 ADJUSTING AND CLEANING

A. Remove temporary protective coverings and strippable films, if any, as fire-protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.

B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.

C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.

D. Touch up marred finishes, or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet and mounting bracket manufacturers.

E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION
SECTION 104416 - FIRE EXTINGUISHERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes portable, hand-carried fire extinguishers and mounting brackets for fire extinguishers.

B. Related Requirements:

1. Section 104413 "Fire Protection Cabinets."

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Product Schedule: For fire extinguishers. Coordinate final fire-extinguisher schedule with fire-protection cabinet schedule to ensure proper fit and function.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

1.5 COORDINATION

A. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Failure of hydrostatic test according to NFPA 10.

b. Faulty operation of valves or release levers.

2. Warranty Period: Six years from date of Substantial Completion.
PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."

B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
   1. Provide fire extinguishers approved, listed, and labeled by FM Global.

2.2 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

A. Fire Extinguishers: Type, size, and capacity for each fire-protection cabinet indicated.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Ansul Incorporated.
      b. Badger Fire Protection.
      c. JL Industries, Inc.; a division of the Activar Construction Products Group.
      d. Larsens Manufacturing Company.
      e. Nystrom Building Products.
      f. Potter Roemer LLC.
      g. Strike First Corporation of America.
   2. Valves: Manufacturer's standard.
   4. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B, and bar coding for documenting fire-extinguisher location, inspections, maintenance, and recharging.

B. Multipurpose Dry-Chemical Type in Brass Container: UL-rated 4-A:80-B:C, 10-lb nominal capacity, with monoammonium phosphate-based dry chemical in chrome-plated-brass container.

C. Clean-Agent Type in Aluminum Container <Insert drawing designation>: UL-rated 2-B:C, 2.5-lb nominal capacity, with HCFC Blend B agent and inert material in enameled-aluminum container; with pressure-indicating gage.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine fire extinguishers for proper charging and tagging.
   1. Remove and replace damaged, defective, or undercharged fire extinguishers.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
3.2 INSTALLATION

A. General: Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.

END OF SECTION
SECTION 110413 - COMMON SUBMITTAL REQUIREMENTS FOR EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:
   1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.
   1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:
   1. Shop Drawings.
   2. Product Data.
   3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
   2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
   3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
   4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
      a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
   1. Refer to Section 01330 for quantity of days allowed for review.
   2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR’S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER’S AND GENERAL CONTRACTOR’S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect’s staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:
   1. Action Codes Permitting Use:
      a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
      b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
      c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect’s notations and Contract Document requirements.
d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.

2. Action Code Prohibiting Use:
   a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
   a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. Informational Submittals: For Architect's information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

1. Action Code for Information Only:
   a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.
   1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.
   1. Submittal Numbering: See below.
   2. Contact Information: Full Name, Phone Number and Email Address.

B. Submittal Definition
   1. Each submittal consists of items from only ONE Specifications section.
2. Complete Submittal: If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.

3. Partial Submittals: If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).

4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be 'broken out' for special handling. Arrange submittals accordingly.

C. Submittal Numbering

1. Number submittals as described below to assist tracking.
2. Number each submittal in the format nnnnnn-nn.
   a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.
   b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.
   c. P-Number for Partial Submittals: Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.
   d. R-Number for Re-submittals: Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.
   e. Examples:

3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS

A. Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.

B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:
   1. Submittal Number: See Submittal Numbering in Submittal Transmittal Requirements paragraph.

D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION
SECTION 113100 - RESIDENTIAL APPLIANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Refrigerator/Freezer.
   2. Clothes Washer/Dryer.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Samples: For each exposed product and for each color and texture specified, in manufacturer's standard size.

D. Product Schedule: For appliances. Use same designations indicated on Drawings.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.5 QUALITY ASSURANCE

A. Provide the following upon request:
   1. Qualification Data: For manufacturer.
   2. Product Certificates: For each type of appliance.
   3. Field quality-control reports.

1.6 WARRANTY

A. Special Warranties: Manufacturer agrees to repair or replace residential appliances or components that fail in materials or workmanship within specified warranty period.
1. Warranty Period: Five years from date of Substantial Completion.

B. Refrigerator/Freezer, Sealed System: [Full warranty, including parts and labor,] [Limited warranty, including parts and labor for first year and parts thereafter,] for on-site service on the product.

1. Warranty Period for [Sealed Refrigeration System] <Insert item>: [Two] [Five] <Insert number> years from date of Substantial Completion.

2. Warranty Period [for Other Components] <Insert requirement>: [Two] <Insert number> years from date of Substantial Completion.

C. Clothes Washer: [Full warranty, including parts and labor,] [Limited warranty, including parts and labor for first year and parts thereafter,] <Insert description> for on-site service on the product.

1. Warranty Period: [Two] [Three] <Insert number> years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain residential appliances from single source and each type of residential appliance from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with applicable provisions in the ABA standards of the Federal agency having jurisdiction and CBC Title 24 Chapter 11B.

2.3 REFRIGERATOR/FREEZERS

A. Refrigerator/Freezer: Two-door, side-by-side refrigerator/freezer and complying with AHAM HRF-1.

1. Basis-of-Design Product: Subject to compliance with requirements, provide GE Profile Model PSB48YSKSS 48" Built-In Side-by-Side Refrigerator with Dispenser, or comparable product by one of the following:
   a. LG Electronics.
   b. Maytag; a division of Whirlpool Corporation.
   c. Sub-Zero, Inc. (Sub-Zero and Wolf).
   d. Whirlpool Corporation.

2. Type: Built in.

3. Dimensions:
   a. Width: 48 inches.
   b. Depth: Approximately 28 inches.
   c. Height: 84 inches.
4. Storage Capacity: Total not less than 28 cu. ft.
5. General Features:
   a. Door Configuration: Flat door with hidden hinges.
   b. Dispenser in door for ice and cold water.
7. Front Panel(s): Stainless steel

2.4 CLOTHES WASHERS AND DRYERS
A. Clothes Washer/Dryer Combination: Complying with AHAM HLW-1.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide GE Unitized Spacemaker Model GUD27ESPMGD 3.8 cu. ft. Capacity Washer with Stainless Steel Basket and 5.9 cu. ft. Capacity Electric Dryer, or comparable product by one of the following:
      a. LG Electronics.
      b. Maytag; a division of Whirlpool Corporation.
      c. Whirlpool Corporation.
   2. Type: Stacking, top-loading washer unit with front loading upper dryer.
   4. Controls:
      a. Wash Cycles: Not less than 10 wash cycles, including regular, delicate, and permanent press.
      b. Wash Temperatures: Not less than 4 settings.
      c. Wash/Rinse Temperatures: Not less than 6.
   5. Electrical Power: 120 V, 60 Hz, 1 phase, 15 A.
      a. Panel Color: Black or Dark Gray.

2.5 GENERAL FINISH REQUIREMENTS
A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install appliances according to manufacturer's written instructions.

B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.

C. District's maintenance personnel will service residential appliances.

END OF SECTION
SECTION 115310 - LABORATORY CASEWORK AND OTHER FURNISHINGS

PART 1 - GENERAL

1.1 SECTION INCLUDES
   A. Wood Laboratory Casework
   B. Metal Laboratory Casework and Tables
   C. Cabinet Hardware
   D. Laboratory Work Surfaces
   E. Electronics Bench
   F. Shelving Assemblies
   G. Modular Parts Bins
   H. Cylinder Rack and Restraint Assemblies
   I. Pipe Drop Enclosure
   J. Drying Rack
   K. Cable / Vacuum Line Through Port (Stainless Steel Benchtop Sleeve/Grommet)
   L. Plastic Grommets and Other Accessories
   M. Finish for Miscellaneous Wood Items
   N. Metal Fabrications
   O. Stainless Steel Fabrications
      1. Work Surfaces
      2. Laboratory Sinks and Cup Sinks
      3. Canopy Hoods
   P. Slotted Channel Framing (Strut)
   Q. Sealant

1.2 RELATED SECTIONS
   A. Division 01: Mockups
   B. Division 09: Flooring (wall base)
   C. Section 115313: Fume Hoods and Other Air Containment Units
D. Section 115343: Laboratory Service Fittings and Fixtures

E. Division 22: Plumbing

F. Division 23: Heating, Ventilated, and Air Conditioning (HVAC)

G. Division 26: Electrical

H. Division 27: Communications

1.3 REFERENCES

C. California Code of Regulations: Title 17, Section 93120: Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products.

I. Scientific Equipment and Furniture Association: SEFA 8-M Recommended Practices for Laboratory Grade Metal Casework.

J. Underwriters Laboratory: UL61010A-1 Electrical Equipment for Laboratory Use.

1.4 BID SUBMITTALS

A. Certification of Compliance: All bidders (including those listed in 2.01-A) must submit a compliance certification statement indicating that their bid includes products and installation which comply with every requirement of the project specifications and drawings (accounting for any RFI responses received during the bidding phase).
B. Certification of Qualifications: All bidders must submit a certification of compliance with the Qualifications requirements outlined below. List specific project experience as evidence of compliance.

C. Substitution Requests: All substitution requests for this scope of work in this section must be made during the bidding phase. No substitution requests will be considered post-bid.

1.5 SUBMITTALS

A. Refer to General Conditions and Division 1 “Submittal Procedures” for submittal requirements. In addition to these requirements, provide submittal requirements specified herein.

B. Submittal requirements:

1. Submittal shall be prepared individually for this specification section. Arrange product data, drawings and information for submission in a complete set for this specification section.
   a. Shop drawings and product data as applicable for required mockups may be submitted separately and should be expedited for submittal as soon as the contract is awarded.

2. Submittal shall contain complete data for all items of this specification section. Periodic or partial submittals of individual components within this specification section will be returned as incomplete and rejected.

3. Submittals shall be organized by specification sequence with section and paragraph number identified.

4. Equipment and components being proposed shall be clearly labeled with all options and accessories indicated and shall be for this specific project. All non-applicable items shall be deleted or struck.

5. Product data submittals provided in PDF format shall consist of fully collated PDF files allowing for collated printing from a single file.

6. Shop drawings shall meet the requirements of the Architectural Woodworking Standards (AWS), except in cases where stricter requirements are identified in this section.

C. Materials List/Product Data: Submit complete materials list, including catalogue data, of all materials, equipment, and products for work in this section.

1. Product data shall not be duplicative or redundant with shop drawings. Do not include drawings in the product data submittal that are included in the shop drawings.

D. Shop Drawings: Submit complete shop fabrication and installation drawings, including plans, elevations, sections, details and schedules.

1. Show relationship to adjoining materials and construction.

2. Show seaming pattern layout of all joints in work surfaces.

3. Shop Drawings shall be in the form of reproducible, PDF files, or photocopies, to scale, sheet size not to exceed 11 inches by 17 inches (A3).

4. Shop drawing submittals provided in PDF format shall consist of fully collated files allowing for collated printing from a single file. Blueline prints are not acceptable.

E. Approved Substitution/Approved Equal: In addition to the items required in Division 1, all substitution requests shall include item-by-item comparison of the proposed substitution to this project specification. A copy of the project specification shall be submitted, with each item and subsection of the project specification marked as “Comply” or “Not Comply.” In any cases where
“Not Comply” is indicated, an explanation of the relative advantages of the proposed design shall be provided.

1. Substitution shall not affect dimensions shown on Drawings.
2. The Contractor shall pay for changes to the building design, including engineering design, detailing, utility and service requirements, and construction costs caused by the requested substitution.
3. Substitutions shall have no adverse effect on other trades, the construction schedule, or specified warranty requirements.
4. Maintenance and service parts shall be locally available for the proposed substitution.

F. LEED Submissions: Provide documentation and certification as required relative to the work of this section to support the project’s submission to the USGBC for the credits indicated below.

G. Submit detailed anchorage and attachment drawings and calculations provided by a licensed Structural Engineer complying with the Uniform Building Code Earthquake Regulations and the California Administrative Code, Title 24 Seismic Restraint requirements.

H. Samples: Accompanying Materials List, submit for Architect's approval two (2) samples of each type of specified finish and color range available for casework, laboratory work surfaces, painted steel fabrications, cabinet hardware, and shelving.

I. Certifications/ Test Data: Submit certifications and test data as required elsewhere in this section, including SEFA structural performance test reports, and finish performance test reports.

J. Operations/Maintenance Manuals: At project close-out, submit for Architect's review and Owner's use, complete operating and maintenance manuals that describe proper operating procedures, maintenance and replacement schedules, components parts list, and closest factory representative for components and service.
   1. Maintenance Materials: Furnish additional materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Furnish as follows:
      a. Provide 15% (Fifteen Percent) of total quantity of complete padlock hasp assemblies as additional spare parts, bagged, boxed, and clearly labeled.

K. Warranty: Submit manufacturer’s warranty including any additional certifications as needed to meet the requirements specified.

1.6 MOCKUP

A. Provide and install products within this scope of work as part of the laboratory mockup, as indicated on the drawings.

B. Location of mockup:
   1. In final location as shown on drawings. Note that products installed may require correction and/or replacement relative to issues of non-compliance with the contract documents.
   2. In off-site location in the vicinity of the project, provided by the Owner.
   3. At location provided by the laboratory subcontractor in the general vicinity of the project, such as a warehouse or shop, as approved by the Architect and Owner.

C. Disposition of mockup:
1. Mockup items may be incorporated into the final project subject to approval and/or corrections as identified in the mockup review.

2. Mockup items will remain the property of the laboratory subcontractor.

D. The mockup will be reviewed and appropriate comments documented. The mockup – and the associated comments - will become a quality sample against which the remainder of the product installation will be compared.

E. Coordinate delivery, installation, and review of the mockup with the contractor. The mockup should be complete and reviewed prior to fabrication of the remainder of the project. To the extent that the subcontractor elects to fabricate the project prior to review and approval of the mockup, it is understood that this is “at risk” and items may require re-fabrication to address issues that arise from the mockup review.

1.7 PRODUCT HANDLING

A. Protection: Use all means necessary to protect work of this section before, during and after installation including installed work and materials of other trades.

B. Replacement: Any damaged work shall be replaced, repaired and restored to original condition to the approval of the Architect at no additional cost or inconvenience to the Owner.

1.8 ENVIRONMENTAL CONDITIONS

A. It is the responsibility of the general contractor or construction manager to provide appropriate environmental conditions within the laboratory spaces throughout the period of installation of wood and composite wood casework products until substantial completion of the project and turnover to the owner. The relative humidity standards as delineated by the Architectural Woodwork Standards should be followed.

1. Humidity must be controlled between 25% and 55% in all areas where laboratory casework is stored and/or installed.

2. The range of relative humidity change should not exceed 30 percentage points.

B. It is the responsibility of the laboratory furniture subcontractor to assess building environmental conditions prior to the delivery and installation of laboratory casework. Wood laboratory casework shall not, under any circumstances, be installed in spaces which do not comply with the requirements outlined above.

1.9 QUALIFICATIONS

A. Work in this section shall be manufactured by and installed by a company/companies having a minimum of eight years documented experience providing and installing products similar to those specified in laboratory applications; an established organization; and production facilities including all tools, equipment and special machinery necessary for specializing in the fabrication and installation of the type of products specified, with skilled personnel, factory trained workmen and an experienced engineering department. Each shall have the demonstrated knowledge, ability and the proven capability to produce the specified work of the required quality and the proven capacity to complete an installation of this size and type within the required time limits.
1.10 ENVIRONMENTAL COMPLIANCE

A. Composite Wood Products – Composite wood products shall comply with the California Code of Regulations: Title 17, Section 93120: Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products.

1. The definition of composite wood products, as applied to this requirement, shall be those as defined in the regulation cited.
2. Comply with the limitations scheduled for enforcement at the time of sale and manufacturing, accounting for the grace periods allowed by the regulation.
3. Provide documentation, certification, and labelling as required by the regulation.

B. Certified Wood: All wood products used in the fabrication shall comply with the FSC’s (Forest Stewardship Council’s) Principles and Criteria as required to contribute towards USGBC LEED MR Credit 7.

1. All lumber shall come from forestry sources that are certified under the Forestry Stewardship Council’s (FSC) Forest Management Certification program.
2. The casework manufacturer must have FSC Chain-of-Custody (COC) Certification.
3. Documentation:
   a. Provide manufacturer’s Chain of Custody Certification.
   b. Provide documentation of the cost, volume, and weight of all wood products provided for this project, including any non-FSC wood products or components.
   c. Provide documentation of the cost, volume, and weight of FSC wood products provided for this project.
   d. In the case of assemblies where some components are FSC-certified and other components are not – provide separate cost, volume, and weight information for each assembly component.

C. Low-Emitting Materials – Composite Wood and Agrifiber Products: Composite wood and agrifiber products used in casework products shall contain no added urea-formaldehyde resins, as required to meet USGBC LEED IEQ Credit 4.4.

1. Laminating adhesives used to fabricate on-site and shop-applied composite wood and agrifiber assemblies shall contain no added urea-formaldehyde resins.
2. Provide certification as required.

D. Wood products as listed below shall contain recycled content to contribute towards achievement of the USGBC LEED Green Building Rating System MR Credit 4.

1. Recycled wood products:
   a. Particleboard plywood cores.

2. The manufacturer shall submit documentation (i.e. “Source of Materials”, Invoices, Third Party Validation, etc.) for specified wood products purchased for this project providing recycled content.
   a. Where assemblies contain both recycled and non-recycled wood products, provide documentation of the weight of recycled wood products relative to the total weight of each assembly.
   b. Provide documentation of the cost of each component or assembly which contains recycled wood products. Provide percentages (by weight) and costs of post-consumer recycled material and pre-consumer recycled material within each component.
E. All steel used in the product fabrication shall comply with the recycled steel content requirements to contribute towards achievement of the USGBC LEED Green Building Rating System MR Credit 4.

1. All steel used in the fabrication of laboratory cabinets, fume hoods and modular laboratory systems shall have a minimum of 25% recycled steel content, as defined by ISO 14021-1999, calculated as follows:
2. (% of Post Consumer Recycled Steel Content by Weight) + 0.5 x (% of Pre-Consumer Recycled Content by Weight) >/= 20% (30%) (40%)
3. Documentation:
   a. The manufacturer shall submit documentation (i.e. “Source of Materials”, Invoices, Third Party Validation, etc.) for steel purchased for this project providing recycled content.
   b. Provide documentation of the cost of each component which contains recycled steel.
   c. Provide percentages (by weight) and costs of post-consumer recycled material and pre-consumer recycled material within each component.

1.11 WARRANTY

A. All products shall be warranted to be free from defects in materials and workmanship for a period of five years following substantial completion. The manufacturer/ dealer/ subcontractor shall repair or replace any products (or parts thereof) that are found to be defective. Replacement will include any parts, labor, shipping, and travel expenses involved. Warranty replacement work must be scheduled in coordination with the Owner’s academic/research schedule, and may therefore require evening and/or weekend work.

PART 2 - PRODUCTS

2.1 WOOD LABORATORY CASEWORK

A. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.
1. CiF Lab Solutions, 53 Courtland Avenue, Vaughan, Ontario, Canada L4K 3T2 Tel: 905 738-5821.
2. Kewaunee Scientific Corporation, P O Box 1842, Statesville, NC 28687 Tel: 704 873-7202.
3. Mott Manufacturing Ltd., 452 Hardy Road, P. O. Box 1120, Brantford, ON, Canada N3T 5T3 Tel: 519 752-7825.
4. Diversified Woodcrafts, Inc ., 300 South Krueger Street, Suring, WI 54174 Tel: 920 842-2136.
5. Pacific Cabinets Inc., 2010 Front Street, Ferdinand, Idaho 83526 Tel: 208 962-5546.
6. ICIscientific, 1865 Highway 641 North, Paris, TN 38242-8814 Tel: 731-642-4251.
7. Approved substitution.

B. Quality Standards:
1. Wood casework shall comply with all requirements of AWS Custom Grade architectural cabinets, unless otherwise specified in this section.
C. Design Requirements:

1. Door and drawer design: Square edged full flush overlay design with eased edges. Applied panels may be required in areas such as sink cabinets and knee spaces with pencil drawers to complete the flush construction. Reveals shall be within the ranges indicated below; however, they shall be consistent across a given project.
   
   a. Reveal from top of door/drawer fronts to top of cabinet: 3/32 inch to 3/8 inch.
   b. Reveal from bottom of door/drawer fronts to bottom of cabinet bottom panel: Flush.
   c. Horizontal and vertical reveals between door and drawer fronts: 3/32 inch to 3/16 inch.
   d. Vertical reveal between side of door and drawer fronts and the side of the cabinet: one-half of the typical horizontal and vertical reveal.

2. Pulls on doors shall be mounted vertically and on drawers horizontally.

3. Grain Pattern:
   
   a. Vertical Matched Grain Pattern: Grain pattern on all exposed surfaces shall be vertical. Entire cabinet front must be cut from a single panel.

4. Toe Kicks/Toe Spaces:
   
   a. All tall storage cabinets to have toe space to match base units.
   b. Provide toe spaces at all fully-exposed sides of cabinets, including locations such as the end of island benches, the end of peninsula benches, and outside-corner cabinets. Toe spaces shall run continuously through all items such as knee opening side panels and end panels.

5. Full-Flush Construction and Installation: All finished panels and surfaces shall be in the same plane as the front of cabinet doors/drawers to provide a true flush overlay appearance.
   
   a. Filler panels: Provide filler panels where casework units meet perpendicular walls to create a continuous appearance.
      
      1). Full-flush end-of-run filler panels are required at all conditions where the joint width is one inch or larger. At conditions where the joint width is less than one inch, filler panel should be flush with cabinet body.
   b. Flush panels: Provide fixed fully-edgebanded flush panels at sink cabinets, knee opening drawer units, filler panels, and elsewhere, so that all finished panels are in the same plane as cabinet doors and drawers to provide a true flush overlay appearance.
   c. Applied panels may be required in areas such as sink cabinets and knee spaces with pencil drawers to complete the flush construction.
   d. At outside corners, align side panel of cabinet with the face of the door of adjacent cabinet.
   e. At inside corners, mount filler panels flush with face of adjacent cabinet doors.
   f. At open cabinets (without doors), at knee opening side panels, and similar conditions, align face of cabinet with face of adjacent cabinet door. Adjust the depth of the cabinet and toe kick accordingly.
   g. Align other filler panels and applied panels with face of adjacent cabinet doors.
   h. Align face of end panels and knee-opening side panels with face of adjacent cabinet doors.
   i. Provide filler/trim panels at locations where undercounter dishwashers or glasswashers are shown and the units provided do not completely fill the opening indicated.
   j. Where knee openings are located against a wall, provide a side/end panel against the wall.
   k. Filler panels shall follow the profile of toe kicks.
6. Extended Ends:
   a. At end-of-run base cabinets, provide extended end to cabinet to create closure to the wall without the use of filler panels. Extended end shall be edgebanded on front and bottom edges. Back edge shall be scribed to the wall with a tight hairline joint. Field-applied panels do not meet this requirement.
   b. At ends of island benches and peninsula benches, provide a paired set of base cabinets, each with an extended end, resulting in a single joint. These extended end panels shall be edgebanded on the front and bottom edges and shall meet at a hairline joint. Applied panels do not meet this requirement.

7. Flush interiors: Set cupboard bottom flush with front-end facers. Surface mounted bottoms and offsets caused by front face frames that interfere with ease of cleaning are not acceptable.

8. Widths of drawer bodies in knee opening rails shall not be less than 18 inches (457 mm). As noted above, applied panel shall be provided to complete the flush construction on either side of the drawer head.

D. Materials and Finishes:

1. Wood:
   a. Definition of cabinet components by surface visibility:
      1). Exposed Surfaces:
         a). Surfaces exposed when doors and drawers are closed.
         b). Surfaces visible when behind glass doors, including tops and bottoms of shelves.
         c). All exterior surfaces of suspended casework.
         d). Open units.
         e). Bottoms of cabinets if 42 inches (1070 mm) or more above finished floor.
         f). Tops of cabinets if less than 72 inches (1830 mm) above finished floor.
         g). Front rail of web frames.
      2). Semi-exposed surfaces:
         a). Surfaces that are visible when solid (opaque) doors are open or drawers are extended, including backs of doors.
         b). Tops of cabinets 72 inches (1830 mm) or more above finished floor when visible from an upper level.
      3). Unexposed surfaces:
         a). Surfaces not normally visible after installation with doors open and drawers extended.
         b). Bottoms of cabinets less than 30 inches (750 mm) above finished floor.
         c). Tops of cabinets over 78 inches (1980 mm) above finished floor and not visible from an upper level.
   b. Wood Species and Veneer Cut: Provide materials that are selected and arranged for compatible grain and color. Do not use materials adjacent to one another that are noticeably dissimilar in color, grain, figure, or natural character markings.
   c. Plain Sawn Oak
      1). Lumber:
a). Exposed and semi-exposed: Plain sawn Red Oak, wheat in color, NHLA Grade FAS, first and seconds or better.
b). Unexposed: Select grade hardwood of a species suitable for the specified purpose.
c). All lumber shall be clean and free of defects; kiln and air dried to uniform moisture content of 6 percent.

2). Veneer:
   a). Exposed: Plain sliced Red Oak, grade A, narrow heart, wheat in color.
      (1). Color and Matching:
         (a). Maximum sapwood allowed: 5%.
         (b). Color streaks or marks allowed.
         (c). Slight color variation.
         (d). No sharp contrast at veneer joints.
      (2). Natural Characteristics:
         (a). Small conspicuous burls and pin knots: combined average not to exceed 4 per 10 square feet (1 m²).
         (b). Conspicuous burl size: 3/8 inch (9.5 mm), maximum.
         (c). Pin knot size, dark part: 1/8 inch (3.2 mm), maximum.
         (d). Pin knot size, total: ¼ inch (6.4 mm), maximum.
         (e). Slight cross bars allowed.
      (3). Manufacturing Characteristics:
         (a). Rough cut or ruptured grain is not allowed.
         (b). Blended repaired tapering hairline Splits: two 1/16 inch (1.6 mm) x 6 inch (152 mm) on end panels only.
         (c). Repairs: very small blending allowed.
      (4). Flitch Width, Face Components: 5 inches minimum, except for outside components.
   b). Semi-Exposed: Plain Sawn Red Oak, Grade B.
   c). Unexposed: Any cut of hardwood veneer, grade 4 or better.
   d). Layup pattern: Book matched

2. Plywood
   a. Typical, Unless Otherwise Noted: Hardwood Veneer Plywood
      1). Product shall be provided with hardwood face veneers as specified above.
      2). Plies:
         a). ¾ inch (19 mm): minimum 7-ply, including face veneers.
         b). 1 inch (25 mm): minimum 9-ply, including face veneer.
      3). Physical Properties:
         a). Screwholding: 355 lb at face.
         b). Average modulus of rupture: 7346 psi (50.65 N/mm²).
   b. Drawer and Door Fronts: ANSI A208.1 M3 Grade Industrial Particleboard Core Plywood.
      1). Product shall be provided with hardwood face veneers as specified above.
      2). Plies:
         a). 3-ply, including face veneers.
3). Minimum Physical Properties:
   a). Screwholding: 247 lbs at face, 225 pounds at edge.
   b). Average modulus of rupture: 2,393 lb/in2.
   d). Hardness: 500 lbs.

   c. Drawer box back, front and sides: Finnish or Baltic Birch Plywood

3. Hardboard: Dry process S2S hardboard made from compressed exploded wood fibers.

4. Edgeband/Facer: 1/8 inch (3 mm) hardwood; species as described above.

5. Dowels: 8 mm, diameter, minimum, hardwood, laterally fluted with chamfered ends.

6. Glue: Type 2 or Type 3 water resistant glue with gluing done in clamps and jigs.

7. Finish for Wood Laboratory Components:
   a. All wood components shall be fully sanded on all surfaces including the underside of exposed components, glazed door element inside edges, penetrations for the attachment of drawer heads, screws attaching adjacent cabinets, cutouts at grilles, and all other such locations. The final installation shall present no rough, splintered, or unfinished surfaces at any visible, exposed, semi-exposed, or touchable locations. This does not apply to components of surfaces which will be fully concealed in the final installation.
   b. Finish processes (stains and finishes) shall be by means of compression spray or a UV roll coater, providing high-transfer efficiency low waste generation. Solvent applied coatings are not acceptable and will not be considered. Manufacturer shall supply documentation that waste generated during the finishing process, is a non-hazardous material, eliminating liquid waste disposal in landfills.

   1). Chemically Resistance Finish: Finish for all wood products shall be environmentally friendly, highly chemically resistant, water-borne, laboratory-grade finish that satisfies the requirements specified herein for chemical and durability resistance. A letter from a third-party validator, verifying independent test results, shall be submitted.
   2). Operator Protection: The application shall be convenient and easily mastered, in a custom spray booth. The finish process shall be cleanly contained and shall have no solvent odor, and shall be applied in an air-conditioned room.
   3). VOC Emissions: Water-borne finishes shall be sprayed and cured with a near zero (2.0 lbs. per gallon for ‘clean finish’) VOC (Volatile Organic Compounds) emissions.
   4). Offgasing: After all wood products have cooled from the curing ovens, the coating shall be firm and stable. No further emissions or “Offgasing/Decomposition” vapors shall occur at room temperature.

   c. Manufacturer may uses either of the following finish systems:

   1). Customized, high-solids, cross-linked, ultraviolet light (UV)-cured coating developed for durability, including abrasion, chemical, impact, and scratch resistance, for flat-line applications. Coatings shall have little or no VOCs.
   2). Chemical-resistant modified acrylic urethane finish with built-in UV blocker, or equal, applied over permanent wood stain.

   d. Stain Color:

   1). Match No. 102 Seaside Oak as manufactured by Kewaunee Scientific Corporation, subject to Architect’s approval.

   e. Application:
1. Finish application and sequence shall be as recommended and designed by the manufacturer for a high quality, laboratory-grade wood casework finish.

2. Preparation: Sand exposed and semi-exposed surfaces smooth, free from dirt and defects.

3. Stain application: Apply stain of color selected to all exposed and semi-exposed casework surfaces. Apply in a manner to achieve a match with the selected color sample upon completion of application of the finish.

4. Finish application: Apply chemical resistant top finish to all stained surfaces. Apply to doors after any notching for hinges has been performed. Finished surfaces shall be even, water-clear and bright. Cloudy or muddy finishes carrying tinting pigments will not be acceptable.

8. Glass: Framed glass doors:
   a. 1/8 inch (3mm) to 7/32 inch (5.5 mm) nominal tempered glass.
   b. Without imperfections or marred surfaces.
   c. All glass should have etched safety information, readable from outside the cabinet.

E. Construction:

1. Base Cabinets:
   a. Assembly: Dowel and/or mortise-and-tenon joinery secured with countersunk screws and pressure-glued.
   b. Cabinet Top:
      1). Front rail of ¾ inch plywood x 2¼ inches (57 mm) or 1 inch (25 mm) x 3 inches (76 mm) hardwood. Back rail: ¾ inch plywood or hardwood, 3-3/4 inches tall.
   c. Cabinet Bottom: ¾ inch (19 mm) thick plywood. Set flush and join to cabinet end panels. Front edge shall be edgebanded.
   d. Cabinets Ends/Sides and Backs Exposed to View from the Outside: ¾ inch (19 mm) thick plywood.
      1). Side panels and end panels: edgeband front edge and bottom edge.
   e. Cabinet Backs, Exposed to View from the Inside at Open Units and Units with Glazed Doors: 1/4 inch (19 mm) thick veneer core plywood.
   f. Cabinet Back, Semi-Exposed and Unexposed:
      1). Removable hardboard, 1/4 inch (6 mm) thick.
      2). Sink base back shall be half-height construction to allow for plumbing and sink waste connection.
      3). Provide split back on drawer cabinets.
   g. Cabinet Base: 3¾ inches (95 mm) x ¾ inch (19 mm) front hardwood or veneer core plywood toe space rail, mounted between end panels, forming a 4 inch (102 mm) high x 2½ inch (63 mm) deep toe space, closed to cupboard bottom. Secure rails to cabinet end panels.
   h. Shelves: 1 inch (25 mm) thick full-depth, 9-ply hardwood plywood. Full-depth is defined as a shelf whose front edge is within ½ inch (13mm) of the face of the cabinet when the shelf is fully back in the cabinet.
      1). Front edge of shelves shall be edgebanded.
      2). Shelf Adjustment: All shelves shall be adjustable on 32 mm centers.
      3). Shelf Tolerance: Shelves shall fit into cabinets or into shelf supports with a tolerance of 1/16 inch per side maximum.
   i. Drawer construction:
1). Drawer box back, front and sides shall be of ½ inch (13 mm), 9-ply Finnish or Baltic Birch veneer plywood, with eased top edge, finished with a Gloss Level 7 polyester acrylic finish. The top edges of the completed drawer bodies shall be very smooth to the touch and shall not present any rough or splintered surfaces. Sides shall be full height with 1 inch (25 mm) clearance to frame opening. Drawers shall be a minimum of 18 inches front to back.

2). Acceptable drawer joinery options:
   a). Dowel: Glued under pressure; 32mm, minimum, dowel spacing to 4 inches (102 mm) high, 64 mm dowel spacing above 4 inches (102 mm).
   b). Multiple Dovetail: Tight fitting and glued.

3). Drawer bottom shall be Baltic Birch veneer plywood. Bottom shall be grooved into the 4 sided drawer box and sealed with hot melt glue process around entire drawer bottom perimeter.
   a). Drawers up to 24 inches wide: 3/8 inch (9mm) thick 7-ply Baltic Birch veneer plywood.
   b). Drawers greater than 24 inches wide: 1/2 inch (13 mm) thick 9-Ply Baltic Birch veneer plywood.

j). Door and Drawer Heads: shall be ¾ inch (19 mm) thick plywood with edgebanding. Edges shall be as specified previously in this section. Drawer heads shall be screwed to drawer box.

k). Flush Panels: As described in the Design Requirements section of this specification.

l). Vertical Dividers: Full height dividers shall be 1½ inch (38 mm) thick plywood. Edgeband exposed edge.

m). Front Horizontal intermediate Rail: ¾ inch (19 mm) x 1½ inches (38 mm) exposed hardwood rail shall be provided between doors and drawers. For all drawer units at benches where service fitting connections are not accessible via an adjacent knee opening filler or cabinet filler panel, drawer units to be provided with Keku fasteners (Keku fasteners not required at other locations). The drawer unit intermediate horizontal and vertical box frames must be removable. These components shall be assembled with Keku suspension fittings as manufactured by Häfele America Co. or approved so these members are easily removable at any time with no special tools to gain access to concealed piped services behind.

n). Intermediate Back Rail: 1½ inch (38 mm) x ¾ inch (19 mm) hardwood lumber to accept hardboard security panel between drawers.

o). Security Panels: Provide hardboard security panels, 1/8 inch (3 mm) thick, in frames when keyed-different locks are specified, or where individual padlock hasps are indicated. Inset security panel into frame on all four sides.

2. Wall, upper and tall cases:
   a). Shall be manufactured with materials and joinery methods as specified for base units, unless otherwise indicated.
   b). Edgebanding:
      1). Wall cabinets side panels: Edgeband front and bottom edges. Wall cabinet end panels: Edgeband front, bottom, and top edges.
      2). Edgeband front and top edges of upper cabinet side and end panels.
      3). Edgeband front, top, and bottom edges of tall cabinet side and end panels.
   c). Cabinet Interior Backs: 1/4 inch thick veneer core plywood, typical for all exposed, and semi-exposed interior backs.
   d). Hardwood plywood tops: 1 inch (25 mm) thick with front edge edgebanded.
e. Wall and upper case hardwood plywood bottoms: 1 inch (25 mm) thick. Tall case hardwood plywood bottoms ¾ inch (19 mm) thick. Edgeband front edges.

f. Bottom hardwood kick rail on tall cases: ¾ inches (95 mm) x ¾ inch (19 mm) front hardwood or veneer core plywood toe space rail, mounted between end panels, forming a 4 inch (102 mm) high x 2½ inch (63 mm) deep toe space, closed to cupboard bottom. Secure rails to cabinet end panels.

g. Solid doors shall be the same construction as specified for base cabinets.

h. Framed-glazed doors: Hardwood construction, ¾ inch (19 mm) x 2¾ inch (70 mm) machined to accept glass. Ease all edges, interior and exterior, including those that frame the glazing. Provide extruded vinyl retaining molding on interior designed so glass can be replaced without tools.

i. Shelves: 1 inch (25 mm) thick full depth, 9-ply hardwood plywood. Full-depth is defined as a shelf whose front edge is within ½ inch (13mm) of the face of the cabinet when the shelf is fully back in the cabinet.

1). Front edge of shelves shall be edgebanded.

2). Front edge of open shelves:
   a). Retainer Rail: Retainer rail as specified elsewhere in this section and detailed on drawings.

3). Shelf adjustment:
   a). Wall units: All shelves shall be adjustable on 32 mm centers.
   b). General purpose tall units: One fixed shelf. All others shall be adjustable on 32 mm centers.

3. Aprons and leg assemblies:
   a. Apron: Not less than ¾ inch (19 mm) x 4-5/16 inch (110 mm) hardwood.
   b. Legs: Not less than 2 inch (50 mm) x 2 inch (50 mm) hardwood.
   c. Leg rails: Not less than 1¼ inch (32 mm) x 2½ inch (63 mm) hardwood.
   d. All exposed edges of legs and aprons shall be eased, sanded smooth, and finished per requirements described above for wood laboratory casework components.

4. Wood Casework Construction Performance:
   a. Base cabinets shall be constructed to support a uniformly distributed load of 200 lbs. minimum per square foot (1000 kg/m²) of cabinet top area (total maximum of 2000 lbs. (900 kg)), including working surface, without permanent distortion or interference with door and drawer operation.
   b. Base cabinets shall be constructed so that when supported on both back corners and one front corner; with a counterweight load of 350 pounds placed on the rear corner behind the supported front corner; and with a load of 200 pounds placed on the unsupported corner – there shall be no permanent damage after 24 hours of loading. Maximum allowable deflection shall not exceed 1/8 inch.
   c. Swinging doors mounted on base units shall support a 200 lb. (113 kg) load located at a test point 12 inches (305 mm) measured horizontally from hinge along the top edge of door through a swing of 160 degrees. Weight test shall allow nominal temporary deflection, but no permanent distortion. Door assembly shall be twist-resistant and rigid, and shall close in a flat plane against the cabinet to permit the door catch at top of door to function properly.
   d. Drawers shall be constructed so that they will support a 150 pound load hung on the drawer head centerline, with the drawer opened 13 inches (330mm), for five minutes. There shall be no interference with the normal operation of the drawer and the drawer head should remain tightly fastened to the drawer.
e. Drawers shall be constructed so that a drawer that is removed and supported on four corners will support a 10 pound sand or shot bag dropped from a height of 24 inches (610mm) without damage.

f. Drawers shall be constructed so that a drawer that is removed and supported at a 45 degree angle shall be capable of withstanding three impacts of a 2 inch (51mm) diameter, 12 inch (305mm) long steel rod (approximately 10 pounds in weight) released from 13 inches (330mm) from the front and back of the drawer. The drawer joinery shall remain intact and the drawer shall operate normally when placed back into the casework cabinet.

g. Drawer mechanical suspension systems shall be designed and attached to that a drawer uniformly loaded with 75 pounds of sand or shot bags shall operate freely without binding over its full range for 50,000 cycles at a rate not exceeding 10 cycles per minute. The force required to open and close the loaded drawer for the purposes of this test shall not exceed 8 pounds.

h. Shelves shall be designed and supported to that they can support a load of 40 pounds per square foot, up to a maximum of 200 pounds per shelf, for 24 hours with no more than 0.35 inches (9mm) of deflection maximum.

F. Hardware: As specified elsewhere in this Section.

G. Wood Finish Chemical Resistance Performance Requirements:

1. Manufacturer shall submit wood finish chemical resistance performance test results. Testing to be performed by independent testing agency.

2. Procedure: Place panel on a flat surface, clean with soap and water and blot dry. Condition the panel for 48-hours at 73º +/- 3ºF (23º +/- 2ºC) and 50 +/- 5% relative humidity or the currently accepted guideline set by ASTM. Test the panel for chemical resistance using forty-nine different chemical reagents by one of the following methods. For both methods, leave the reagents on the panel for a period of one hour. Wash off the panel with water, clean with detergent and naptha, and rinse with deionized water. Dry with a towel and evaluate after 24-hours at 73º +/- 3ºF (23º +/- 2ºC) and 50 +/- 5% relative humidity, or the currently accepted guideline set by ASTM.

   a. Method A: Test volatile chemicals by placing a cotton ball saturated with reagent in the mouth of a 1 ounce (29.574cc) bottle and inverting the bottle on the surface of the panel.

   b. Method B: Test non-volatile chemicals by placing five drops of the reagent on the surface of the panel and covering with a 24mm watch glass, concave side down.

3. Rating System: Evaluations shall use the following rating system:

   - Level 0 No detectable change.
   - Level 1 Slight change in color or gloss.
   - Level 2 Slight surface etching or severe staining.
   - Level 3 Pitting, cratering, swelling, or erosion of coating. Obvious and significant deterioration.

4. Acceptance Level:

   a. Individual test results for the specified 49 reagents shall be within the Range for that reagent as specified on the table below.

   b. There shall be no more than four (4) Level 3 conditions.

5. Table of reagents:

2.2  METAL LABORATORY CASEWORK AND TABLES

A. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be the provided by a single
manufacturer. Corrosive and flammable liquid/solvent storage cabinets may also be provided by
the manufacturers listed with their descriptions.

1. Laboratory Casework:
   a. Air Master Systems, 6480 Norton Center Drive, Muskegon, MI 49441 Tel 231 798-1111.
   b. Bedcolab Ltd, 2305 Francis Hughes Avenue, Laval, Quebec, Canada H7S 1H5 Tel 514 384-2820.
   c. CiF Lab Solutions, 53 Courtland Avenue, Vaughan, Ontario, Canada L4K 3T2 Tel: 905 738-5821.
   d. ICI scientific, 1865 Highway 641 North, Paris, TN 38242-8814 Tel: 731-642-4251.
   e. Kewaunee Scientific Corporation, P O Box 1842, Statesville, NC 28687 Tel: 704 873-7202.
   f. Mott Manufacturing Ltd., 452 Hardy Road, P. O. Box 1120, Brantford, ON, Canada N3T 5T3 Tel: 519 752-7825
   g. Approved substitution.

B. Metal Laboratory Casework

1. Design Requirements:
   a. Door and drawer front design: Square edged inset metal construction with all front surfaces above the toe space in the same plane.
   b. Pulls on doors shall be mounted vertically and on drawers horizontally.
   c. All tall cases shall be provided with toe space to match base units.
   d. All cabinets shall be constructed and finished to be suitable for use as stand-alone units and to permit future rearrangement without the need for additional parts or finish.
   e. Widths of drawers in knee opening rails shall not be less than 24 inches (600 mm) or the width of the rail whichever is the lesser.
   f. Cabinets below fume hoods that conflict with ductwork, cup sinks, or waste connections shall be 19 inches deep to accommodate any obstructions.

2. Materials:
   a. Steel: Cold-rolled furniture stock sheet steel, prime grade, roller leveled.
      1). Steel shall be treated at the mill to be free of scale, ragged edges, deep scratches, or other injurious effects.
      2). All gauges indicated are to be U.S. standard.
   b. Glass: Framed glass doors:
      1). 1/8 inch (3mm) to 7/32 inch (5.5 mm) thick tempered glass.
      2). Without imperfections or marred surfaces.
      3). All glass should have etched safety information, readable from outside the cabinet.

3. Base, Wall, Upper, and Tall Cabinets:
   a. General:
      1). Exterior corners: shall be spot and arc welded with heavy back up reinforcement at exterior corners. All face joints shall be arc welded and ground smooth to provide a continuous flat plane.
      2). All units shall have a cleanable smooth interior. Front and rear posts, reinforcing members or channel uprights shall be enclosed full heights on all cabinet openings.
      3). End Uprights shall be formed into not less than a channel formation at top, bottom, back and front.
4). The edge of the vertical uprights shall be formed to provide a strike for doors and drawers, and shall be perforated for the support of drawer channels, intermediate rails and hinge screws.

5). An upright filler shall be screwed in place in all cupboard units to close the back of the channel at front of the upright and to provide a smooth interior for the cupboard to facilitate cleaning.

6). The upright filler shall be perforated with shelf adjustment holes at no more than ½ inch (12.7 mm) centers.

7). The inside front of the upright shall be further reinforced with a full height 14 gauge (2.0 mm thick) hinge reinforcement angle.

8). Die Formed Gussets: shall be furnished in each bottom corner of base units to insure rigidity, and a 3/8 inch (10 mm) -16 leveling bolt, 3 inches (75 mm) long, shall engage a clinch nut in each gusset. Each leveling bolt and gusset shall be capable of supporting 500 lbs (225 kg). (Each unit shall support 2000 lbs. (900 kg) uniformly distributed on a work top.) Provide caps at all penetrations provided to access leveling devices.

b. Cabinet Base:

1). Case bottom and bottom rail shall be formed of one piece of metal except in corner units and shall have both sides and back formed up or down and shall be offset in front to provide a door and drawer recess rabbet.

2). Toe Space Rail: shall extend up and forward to engage bottom rail to form a smooth surfaced toe space, 3 inches (75 mm) deep and 4 inches (100 mm) high. Whenever the base is omitted for units to be set on building bases or separate metal bases, the toe space rail shall extend back 4½ inches (115 mm).

c. Cabinet Back, Unexposed: Cabinet back shall consist of a top and bottom rail, channel formed for maximum strength and welded to back and top flange of end uprights, with space between left open for access to plumbing lines. All units shall be provided with removable back panels.

1). Sink units shall be provided with fixed half-height backs to allow plumbing lines to enter and exit the cabinet through the open area.

d. Shelves: shall be full depth formed down ¾ inch (19 mm), back 7/8 inch (22 mm) and up ¼ inch (6 mm) at front and rear and formed down at ends ¾ inch (19 mm). Shelves over 36 inches (914 mm) in length shall be additionally reinforced by a flanged channel shaped member electro-welded to underside of shelf. Shelves shall be adjustable. Full-depth is defined as a shelf whose front edge is within ½ inch (13mm) of the face of the cabinet when the shelf is fully back in the cabinet.

1). Restraint: At open shelf units, provide retainer rail as specified elsewhere in this section and detailed on drawings.

e. Doors: shall be readily removable and hinges easily replaceable. Hinges shall be applied to the case and door with screws. Welding of hinges to either case or door will not be acceptable.

f. Door and Drawer Heads:

1). Metal, Flush Inset: shall be a two-piece sheet steel assembly of ¾ inch (19 mm) overall thickness to consist of an inner pan formed as an extension of the drawer body, an outer pan having a channel formation on all four sides, and the interior space filled with a non-organic sound deadening material at the time of assembly. Door Pans and Drawer Heads shall be painted inside and out prior to assembly.
a). All four corners of door and drawer heads shall be welded closed and ground smooth to eliminate exposure of raw edges and open gaps.

b). Glazed Hinged Door Construction: Glazed swinging doors shall be 3/4 inch thick and consist of an inner and outer door pan welded to form a single unit. Outer door pan shall be 18 gauge steel, formed into a channel or flanged shape at all four sides. It shall be pierced and formed to create a 3 inches wide frame with a beveled edge around the glass opening in the center of the door. Inner door pan shall be 18 gauge steel, flanged at all four sides, pierced for a glass opening in center of the door, with 16 gauge hinge reinforcements welded in place. Glazing shall be held in place by a rubber or vinyl gasket around the entire edge of the glass. Outer door pan shall be prepared as necessary to accept attachment of pulls as specified elsewhere in this section.

g. Drawer Construction:
   1). Drawer bodies shall be made in one-piece construction including the bottom, two sides, back and inner front. They shall be fully coved at interior bottom on all four sides for easy cleaning. Sides shall be full height with ½ inch (13 mm) clearance to frame opening. Drawers shall be a minimum of 18 inches front to back.
   2). Drawer Suspension: Refer to Drawer Slides under Hardware section.
   3). Drawer stops: shall be provided to insure smooth, quiet operation at point of contact with cabinet front.

h. Top Horizontal Rail: Provide on base cabinets such that rail shall interlock within the flange at top of end panels for strength. Reinforcements shall be provided at all front corners for additional welded strength between vertical and horizontal case members.

i. Intermediate Rails: Provide on base cabinets such that rails shall be provided between doors and drawers, but shall not be provided between drawers unless made necessary by locks in drawers. When required, intermediate rails shall be recessed behind doors and drawer fronts, and designed so that security panels may be added as required.

j. Intermediate Vertical Uprights: shall be furnished to enclose cupboards when used in a unit in combination with a half width bank of drawers. However, to allow storage of large or bulky objects, no upright of any type shall be used at the center of double door cupboard units.

k. Security Panels: Provide security panels in frames between drawers and cabinets within a cabinet where keyed different locks are indicated.

l. Knee Space Service Strip Cover Panels where specified, shall be 18 gauge (1.3 mm thick) steel, of the same finish as cabinets, and shall be furnished at open spaces under counter top where no cabinets occur. They shall be easily removable and shall cover piping from underside of top of service ledge to floor.

m. Provide filler panels where required between cabinets, at corner intersections of cabinets, between cabinets and walls and wherever else required for a complete finished installation. For tall cabinets, filler panels shall be provided for vertical face and top. For wall cabinets, filler panels shall be provided for vertical face, top and bottom. Filler panels shall follow the profile of toe kicks.

4. Metal-Framed Laboratory Tables

   a. Tops: Refer to Laboratory Furnishing drawings for top materials, as described in the Laboratory Work Surfaces section.

   1). Tops shall be mechanically attached to the table frame with a minimum of six concealed metal angle brackets screwed into the inside of the table.
frame and the bottom of the work surface. Metal angle bracket may be stainless steel, zinc-coated steel, or powder-coated steel. Screws shall be dome-head, with a minimum size of No. 5, ½ inch long, or otherwise sufficient to firmly and permanently secure the benchtop to the table frame allowing that the table may be picked up by the top.

b. Electrical receptacles: Tables shown with electrical receptacles shall be pre-wired, including cutouts for electrical receptacles, black cord, straight NEMA 5-20P plug, back boxes, gray NEMA 5-20R decora-style electrical receptacles, stainless steel faceplates, wiring, and junction boxes as required for a complete functional assembly.

1). The first electrical device wired from the main cord shall be a 20 amp, GFCI outlet with downstream protection capability.
2). Ensure wiring to downstream receptacles is connected to the downstream outlets such that GFCI protection is provided to downstream outlets.
3). Cover plates of downstream outlets to be engraved to note that GFCI protection is provided via upstream receptacle.
4). UL Listing:
   a). The table assembly shall be UL61010A-1 tested and labeled.

c. Leveling Glides and Leg Shoes:

1). Each leg other than those fitted with casters shall have leveling glides: (2 inch) (48 mm) diameter, two-piece pivot construction, steel housing, non-marring, phenolic or translucent plastic insert, (1/2 inch) (12 mm) diameter, minimum (1 1/2 inch) (36 mm) long zinc plated stems. Each glide shall have a load bearing capacity of 150 lbs.
2). Each leg other than those fitted with casters and adjustable-height legs, shall have leg shoes: Black coved vinyl or rubber leg shoe, 2 inches (50 mm) in height.

d. Casters: Where indicated on Laboratory Furnishing drawings, provide sets of 3 ½ inch (89 mm) diameter wheels with self-lubricating bearing, rated to carry 250 pounds (113 kg) minimum each. Each caster must swivel and have a locking brake at front wheels. Wheel shall be of molded polyurethane tread mechanically locked to a polyolefin core. Movable tables to have all 4 swivel and locking casters.

e. Adjustable-Height Legs: Where indicated on Laboratory Furnishing drawings, provide a stainless steel insert at the bottom of each leg. Height of each insert shall be adjustable in 2 inch (50mm) increments using stainless steel pins. This shall result in a work-surface top height range between 30 inches (750mm) and 38 inches (1000mm). Include leveling glide at bottom of each insert.

f. Construction:

1). Table rails and legs shall be fully welded into a single-piece table frame structure. No mechanical joints between members are permitted.

g. Rails: Not less than 1½ inch x 4½ inch 16 gauge (38 x 114 x 1.6 mm) channel steel sections, reinforced as necessary for leg attachment.

h. Legs: Not less than 2 inch x 2 inch 16 gauge (50 x 50 x 1.6 mm) square tubular steel sections.

i. Materials and Finish: Refer to Metal Fabrications specifications in this Section for material and finish requirements.

5. Aprons and leg assemblies:

a. Apron: Not less than 1½ inch (38 mm) x 4 inch (114 mm) 16 gauge (x 1.6 mm thick) channel steel sections, reinforced as necessary for leg attachment.
b. Legs: Not less than 2 inch (50 mm) x 2 inch (50 mm) 16 gauge (1.6 mm thick) square tubular steel sections.

c. Leg rails: Not less than 1½ inch (32 mm) x 2½ inch (63 mm) 16 gauge (1.6 mm thick) steel sections, reinforced as necessary for leg attachment. Each leg shall have a recessed leveling screw and a black, coved vinyl or rubber leg shoe, 2 inches (50 mm) in height.

6. Fume Hood Cabinets:

a. Purpose-designed metal cabinet with fixed panel above door to conceal cup sink and plumbing.

b. Provide metal fume hood cabinets where adjacent cabinetry below a fume hood is also metal.

7. Corrosives Storage Cabinets:

a. Manufacturers:

1). Manufacturers of metal laboratory casework.

2). Justrite Manufacturing Company, 2454 Dempster St., Suite 300, Des Plaines, IL 60016 Tel: 800 798-9250.

3). Approved substitution.

b. Purpose-designed lined metal cabinet. Base cabinets may have either of the following two types of linings. Tall cabinets must only have Type 2 lining with a 100% seamless non-porous flame-coated thermoplastic liner.

c. Type 1 Lining: Cabinet shall be complete lined with a polypropylene or polyethylene liner with sealed or seamless intersections between panels. Liner shall be the full depth of the cabinet. No metal of any type shall be exposed within the lined interior of the cabinet. Screw-heads, if required, shall be covered with hinged-type (not snap-on) plastic screw-head covers.

1). Shelf: Removable full-depth polypropylene or polyethylene shelf. Full-depth is defined as a shelf whose front edge is within ½ inch (13mm) of the face of the cabinet when the shelf is fully back in the cabinet.

d. Type 2 Lining: All interior surfaces of the cabinet shall be coated with a 100% seamless non-porous flame-coated thermoplastic liner. Liner shall be applied to all interior walls, ceiling, sump, door interiors, and shelving. Basis of design: Plascore PPA-751, or Justrite Chemcor. No known equal.

1). Shelf: Removable adjustable full-depth metal shelf coated with lining material. Full-depth is defined as a shelf whose front edge is within ½ inch (13mm) of the face of the cabinet when the shelf is fully back in the cabinet.

2). Refer to drawings for required quantity of shelves.

e. Label: "CORROSIVES" in conspicuous silk-screened lettering. Stick-on decals are not acceptable. Size and style of lettering shall match the Flammable Liquid/Solvent Storage Cabinet label. Lettering shall be 2 1/2 inches tall. Color of lettering shall be red. If cabinet color is red, lettering shall be yellow.

f. Locks: Cabinet doors shall be lockable. Lock shall have no metal parts exposed within the lined interior.

g. Venting:

1). Cabinets below or adjacent to fume hoods: Provide and install 2 inch (50 mm) diameter schedule 40 PVC vent pipe and PVC fittings. Termination of vent pipe maybe one of the following:

a). Extend vent pipe 4 inches (100 mm) above dished worktop, behind the baffle in the hood, as shown on the drawings. Provide hole through fume hood work surface above the corrosive storage cabinet
to accommodate 2 inch (50 mm) diameter vent pipe. Seal gap around penetration with clear silicone sealant.

b). Extend vent pipe up within the fume hood side wall and vent through the hood side wall liner behind the upper portion of the fume hood baffle.

2). Cabinets not below or adjacent to fume hoods: Vent connection to exhaust duct system shall be under Division 23. Provide hole in back of cabinet to accept exhaust connection.

h. Seismic Anchor: Provide seismic anchor for freestanding cabinets. Seismic anchors may be floor or wall attachments, but shall not attach to adjacent casework or work surfaces. Seismic anchors shall be accessible without removal of laboratory casework, furnishings, or equipment.

8. Flammable Liquid/Solvent Storage Cabinets:

a. Manufacturers:

1). Manufacturers of metal laboratory casework.
2). Eagle Manufacturing Company, 2400 Charles St., Wellsburg, WV 26070 Tel: 304 737-3171.
3). Justrite Manufacturing Company, 2454 Dempster St., Suite 300, Des Plaines, IL 60016 Tel: 800 798-9250.
4). Approved substitution.

b. Purpose-designed double-walled metal cabinet for the storage of flammable, combustible and solvent liquids.

d. Label: "FLAMMABLE - KEEP FIRE AWAY" in conspicuous silk-screened lettering. Stick-on decals are not acceptable. Size and style of lettering shall match that of the Corrosive Storage Cabinet label. "FLAMMABLE" lettering shall be 2 1/2 inches tall. "KEEP FIRE AWAY" lettering shall be 2 inches tall. Color of lettering shall be red. If cabinet color is red, lettering shall be yellow.

e. Locks: Cabinet doors shall be lockable.

f. Floor pan: Provide a 2 inch (50 mm) deep liquid tight pan to cover the entire bottom of the cabinet to contain liquid leaks and spills.

g. Shelves: Provide heavy-duty full-depth metal shelves using pan-type construction to create a liquid-tight containment tray.

1). Refer to drawings for quantity of shelves.

h. Casters: Provide cabinets with lockable casters where indicated on the Laboratory Furnishing drawings.

i. Standards:

1). Comply with the requirements of OSHA and NFPA 30.
2). Comply with the requirements of Uniform Fire Code and the International Fire Code.
3). Cabinets should be certified and labelled with UL 1275 and FM 6050 labels.

j. Flammable liquid/solvent storage base cabinets shall not be vented. Seal vent openings with bungs as provided by manufacturer.

k. Venting of tall cabinets:

1). Remove both metal bungs from cabinet outlets and replace with flash arrestors provided by manufacturer. Connection with 2 inch (50 mm) black iron vent piping to the HVAC systems as shown on LF drawings shall be under Division 23.
2). Vents from multiple cabinets shall not be manifolded prior to connection to the building system

l. Electrical grounding:
   1). Provide each flammable liquid / solvent storage cabinet with an externally mounted grounding conductor screw terminal for up to No. 8 AWG conductor, mounted at the top of the cabinet.
   2). Connection from the equipment grounding bus at the lab branch circuit panel to the storage cabinet terminal shall be under Division 26.

m. Seismic Anchor: Provide seismic anchor for freestanding cabinets and cabinets located below fume hoods designated to be removable for access for persons with disabilities. Seismic anchors may be floor or wall attachments, but shall not attach to adjacent casework or work surfaces. Seismic anchors shall be accessible without removal of laboratory casework, furnishings, or equipment. Anchor attachment shall not void UL listing.

9. Metal Casework Construction Performance: Base cabinets shall be constructed to support a uniformly distributed load of 200 pounds minimum per square foot (1000 kg/m²) of cabinet top area (total maximum of 2000 pounds (900 kg)), including working surface without objectionable distortion or interference with door and drawer operation.
   a. Base cabinet corner gussets with leveling bolts shall support 500 pounds (225 kg) per corner, at 1½ inch (38 mm) projection of the leveling bolt below the gusset.
   b. Each adjustable and fixed shelf 4 feet (1219 mm) or shorter in length shall support an evenly distributed load of 40 pounds per square foot (200 kgf/m²) up to a maximum of 200 pounds (90 kg), with nominal temporary deflection, but no permanent set.
   c. Drawer assemblies shall automatically maintain alignment in cabinet opening and shall not bind during opening or closing of the drawer so as to minimize glass breakage and damage to fragile parts.
   d. Swinging doors mounted on base units shall support a 250 lb. (113 kg) load located at a test point 14 inches (356 mm) measured horizontally from hinge along the top edge of door through a swing of 180 degrees. Weight test shall allow nominal temporary deflection, but no permanent distortion. Door assembly shall be twist-resistant and rigid, and shall close in a flat plane against the cabinet to permit the door catch at top of door to function properly.

C. Hardware: As specified elsewhere in this Section.

D. Metal Casework Color: As selected by the Architect from manufacturer's full color line and complying with finish requirements described below.

E. Metal Casework Finish Requirements:
   1. Paint finish for steel laboratory products shall utilize a dry coating process with minimal waste generation. Liquid-applied coatings shall not be acceptable. Manufacturer shall supply documentation that waste generated during the painting process, is a solid, non-hazardous material.
      a. Pretreatment: Finish process shall incorporate a phosphate conversion coating during the pretreatment/cleaning operation.
      b. Operator Protection: The painting process shall be cleanly contained, have no solvent odor and be performed in an air-conditioned room.
      c. VOC (Volatile Organic Compounds) emissions shall not exceed 0.29 lbs per gallon (35 g/L).
d. Offgasing: No further emissions or "Offgasing/Decomposition" vapors shall occur at room temperature from installed finished parts.

2. Preparation: After the units have been completely welded together and before finishing, they shall be given a pre-paint treatment to provide excellent adhesion of the finish to the metal and to aid in the prevention of corrosion. Physical and chemical cleaning of the metal shall be accomplished by washing with an alkaline cleaner, followed by a spray treatment with a heated cleaner/phosphate solution and pretreated with iron phosphate spray followed by a neutral final seal prior to application of final finish. The strength of each solution shall be monitored by filtration to insure consistent quality. All treated parts shall be immediately dried in heated ovens and gradually cooled before application of the finish. Treated metal parts shall be clean and properly prepared to provide optimum adhesion of finish and resistance to corrosion.

3. Application: Electrostatically apply powder coat of selected color and bake in controlled high temperature oven to assure a smooth, hard satin finish. Surfaces shall have a chemical resistant, high grade laboratory furniture quality finish of the following thicknesses:
   a. All surfaces, exterior or interior, exposed to view, shall receive sufficient powder coat to achieve an average 1.5 mil (38 µm) film thickness with a minimum 1.2 mil (30 µm) film thickness and shall have smooth satin luster.
   b. Backs of cabinets and other surfaces not exposed to view shall have sufficient powder coat to achieve an average 1.0 mil (25 µm) film thickness.

4. All drawer bodies to be finished in matching color or in a uniform neutral color.
5. Concealed interior parts shall receive corrosion-resistant treatment.
6. Finish must be UV stable.

F. Metal Finish Performance Requirements:
1. Manufacturer shall submit metal finish performance testing results. Testing to be performed by independent testing agency.
2. Chemical resistance:
   a. Test procedure: Place samples on a flat surface, clean with soap and water and blot dry. Condition the panel for 48-hours at 73 +/- 3 degrees Fahrenheit (23(+ 2(C) and 50+ 5% relative humidity, or the currently accepted guideline set by ASTM. Test the samples for chemical resistance using forty-nine different chemical reagents by one of the following methods. For both methods, leave the reagents on the sample for a period of one hour. Wash off the sample with water, clean with detergent and naphtha, and rinse with deionized water. Dry with a towel and evaluate after 24-hours at 73 ± 3 degrees Fahrenheit (23°± 2°C) and 50± 5% relative humidity, or the currently accepted guideline set by ASTM
      1). Method A: Test volatile chemicals by placing a cotton ball saturated with reagent in the mouth of a 1 ounce (29.574cc) bottle and inverting the bottle on the surface of the sample. The cotton ball shall remain in contact with the sample for the duration of the test.
      2). Method B: Test non-volatile chemicals by placing five drops of the reagent on the surface of the sample and covering with a 24mm watch glass, convex side down.
   b. Rating System: Evaluations shall use the following rating system:
      Level 0 No detectable change.
      Level 1 Slight change in color or gloss.
      Level 2 Slight surface etching or severe staining.
      Level 3 Pitting, cratering, swelling, or erosion of coating. Obvious and significant deterioration.
c. Acceptance Level:

1). Individual test results for the specified 49 reagents shall be within the Range for that reagent as specified on the table below.
2). There shall be no more than four (4) Level 3 conditions.

d. Table of reagents:

3. **Hot Water Test**
   
a. Test Procedure: 190 to 205 degrees Fahrenheit (88°C to 96°C) hot water shall be allowed to trickle (with a steady stream and at a rate of not less than 6 ounces (177.5 cc) per minute) on the finished surface, which shall be set at an angle of 45°, for a period of 5 minutes.
   
b. Acceptance Level: After cooling and wiping dry, the finish shall show no visible effect from the hot water.

4. **Paint Adhesion on Steel Test**
   
a. Test Procedure: Test shall be based on ASTM D2197-86 “Standard Method of Test for Adhesion of Organic Coating.” Two sets of eleven parallel lines 1/16 inch (1.587 mm) apart shall be cut with a razor blade to intersect at right angles thus forming a grid to 100 squares. The cuts shall be made just deep enough to go through the coating, but not into the substrate. Brush surface lightly with a soft brush for one minute. Examine under 100 fc (1076 lux) of illumination.
   
b. Acceptance Level: Ninety or more of the squares shall show finish intact.

5. **Impact Test**
   
a. Test Procedure: Drop a 1 pound (0.4536 kg) ball (approximately 2 inch (50.8 mm) diameter from a distance of 12 inches (305 mm) onto a flat horizontal surface, coated to manufacturer’s standard manufacturing method.
   
b. Acceptance Level: No visual evidence to the naked eye of cracks in the finish due to impact.

6. **Paint Hardness on Steel Test**
   
a. Test Procedure: Paint film shall be tested with pencils of various hardnesses. Pencils shall have a wide, sharp edge. Pencils shall be pushed across surface in a chisel-like manner.
   
b. Acceptance Level: Finish film shall not rupture from a sharpened 4H pencil.

### 2.3 CABINET HARDWARE

**A. General:** Special cabinets, such as corrosives storage, flammable liquid and solvent storage, rock storage, map storage, museum storage, radioisotope storage, and narcotics lockers, may be provided with the manufacturer’s standard hardware.

1. All door and drawer pulls shall match, regardless of type of casework, except for:
   
a. Flammable liquid/ solvent storage cabinets, which should use manufacturer’s standard latch handles as required to satisfy requirements of regulatory approvals.

2. All hardware shall be compliant with the ADA Standards for Accessible Design (28 CFR Part 36).

**B. Drawer and Hinged Door Pulls:**

1. Drawer and door pulls shall attach to door or drawer with machine screws. Two (2) pulls shall be furnished on drawers wider than 28 inches (711 mm). Plastic pulls or other types subject to breakage are not acceptable.

2. Type: Pulls shall be round “wire.”
a. **Material and Finish:**
   1. Stainless steel with finish as follows:

b. **Size:**
   1. Length: 4 inches (100 mm) center to center of screw holes.
   2. Diameter: ¼ inch (6 mm).

C. **Hinges:**
   1. General: Hinges shall be attached to both door and case with three screws through each leaf. Provide two hinges for doors up to 48 inches (1219 mm) high; three hinges for doors over 48 inches (1219 mm) high.
   2. Type: Institutional with a five-knuckle bullet-type barrel. Characteristics:
      a. Height: 2½ inches (63 mm), nominal.
      b. Material: Stainless steel with stainless steel screws.
         1. Finish:
            b). BHMA 629 Bright (Previously US32).

      2. Manufacturers:
         b). Approved substitution.

D. **Shelf Hardware:**
   1. Shelf Supports:
      a. Adjustable shelf supports: Adjustable clear plastic shelf support with lockdown clips.

      2. Manufacturers:
         a). Bainbridge Manufacturing, Inc., P. O. Box 487, 237 W 3rd, Waterville, WA 98858 Tel: 800 255-4702.
         b). The Engineered Products Company (Epco), P. O. Box 108, Flint, MI 48501 Tel: 313 767-2050.
         c). Knape & Vogt Manufacturing CO., 2700 Oak Industrial Dr. NE, Grand Rapids, MI 49505 Tel: 616 459-7620.
         d). Sugatsune America, Inc. 221 East Selandia Lane, Carson, CA 90746 Tel: 310 329-6373.
         e). Approved substitution.

E. **Catches:**
   1. Roller Catches:
      a. Types and Materials: Roller catches shall be one of the following types. All-plastic or knuckle-type catches are not acceptable, except at corrosive storage cabinets.
         1). Tension ball catches consisting of a case with an adjustable-tension ball catch and a matching strike. Components shall be either stainless steel, chrome plated zinc alloy, or chrome-plated brass.
         2). Nylon roller housed in a steel case, which catches on a steel strike plate. Steel components shall be zinc finished.
3). At metal casework base cupboards, catches may consist of a two-piece heavy-duty cam action positive catch positioned near the pivoting edge of door which provides a clean unobstructed opening. Main body of the catch shall be confined within an integral cabinet divider rail, while latching post shall be mounted on the hinge side of door.

4). At corrosive storage cabinets, catches shall be non-metallic.

b. Application: Provide roller catches at all cabinet doors without elbow catches or as indicated.

1). Unless otherwise indicated, at wall and base cabinets, locate roller catches at top of door.

2). Unless otherwise indicated, at tall cabinets, locate roller catches at fixed center shelf.

c. Manufacturers:

1). The Engineered Products Company (Epco), P. O. Box 108, Flint, MI 48501 Tel: 313 767-2050.

2). Sugatsune America, Inc. 221 East Selandia Lane, Carson, CA 90746 Tel: 310 329-6373.

3). Approved substitution.

2. Elbow catches: Heavy-duty, adjustable, spring-type elbow catch and strike plate.

a. Material: Brass or steel with bright chromium plated finish.

b. Application: Elbow catches shall be used on left hand doors of locked double door cabinets, including tall cabinets.

1). At tall cabinets, elbow catch shall latch to fixed center shelf. Latching devices using chains or strings are not acceptable.

c. Manufacturers:

1). The Engineered Products Company (Epco), P. O. Box 108, Flint, MI 48501 Tel: 313 767-2050.

2). Approved substitution.

F. Drawer slides:

1. Typical: Ball bearing slides:

a. Material:

1). Clear, zinc-coated steel.

b. Full extension, 100 lb/pr. (45 kg/pr.) capacity: Accuride 3832, Fulterer FR5000, or equal.

c. File drawers shall be equipped with rail mounted overtravel, 150 lb/pr. (68 kg/pr.) capacity: Accuride 4034, Fulterer 5755, or equal.

d. Keyboard shelves or trays: 3/4 extension 75 lb/pr. (34 kg/pr.) capacity keyboard shelf slide. Product: Accuride 2009, or equal.

f. Manufacturers:

1). Accuride, 12311 Shoemaker Ave., Santa Fe Springs, CA 90670 Tel: 562 903-0200.

2). Hettich America LLP, 6225 Shiloh Road, Alpharetta, Georgia 30005 Tel: 770 887-3733.

3). Fulterer USA, 542 Townsend Ave., High Point, NC 27263 Tel: 800 395-4646.
4). Waterloo Furniture Components Inc., 501 Manitou Dr., Kitchener, Ontario, Canada N2C 1L2 Tel: 519 748-5060.

5). Approved substitution.

G. Drawer Stops: All regular drawers shall be equipped with integral stops to prevent drawer head impact with cabinet body.

H. Door Stops: Provide door stops for any cabinet door, which will strike an obstruction when opened between 90 and 135 degrees.

1. Stop to be either:
   a. Sash chain, No. 30 zinc-plated steel.
      1). Terminations: Zinc chromate wire screw eyes. Open eye as required to attach stop with screws. Through-bolting not allowed.
   b. Coated cable.
      1). Seven-strand, 7-wire-per-strand, stainless steel cable with clear nylon coating.
      2). Wire diameter: 0.047 inches.
      3). Composite diameter with coating: 0.063 inches.
      4). Terminations: Number 10 stake eye on both ends. Attach to door/cabinet with screws. Through-bolting not allowed.
      5). McMaster Carr part number 30345T3 or equivalent.

2. Engineer stop to length to allow door to open 1 ½ inch (40 mm) from obstruction.

I. Number Plates: Provide 5/8 inch (16 mm) by 1 ¼ inches (32 mm) aluminum number plates with black numbers, pinned in place. Stick-on holders not acceptable. Number plates shall be provided at all drawers where indicated on the plans. Number drawers sequentially in each laboratory.

J. Locks:

1. General: Provide locks on all file cabinet drawers. Provide locks at other locations as indicated on the drawings.

2. Lock type: Deadbolt-type lock.
   a. Disc-tumbler-type locks and/or cam-type locks will not be accepted.
   b. Framed sliding door locks shall be plunger type.
   c. Refer to Elbow Catches section, above, for requirements at two-swinging-door cabinets.

3. Testing requirements:
   a. Locks shall comply with ANSI/BHMA standard E07121.
   b. Lock shall be cycle tested per ANSI/BHMA A156.11 Grade 1.

4. Include spacers, adapters, fasteners, and strikes.
   a. All locks shall strike into metal material. Striking directly into wood is not acceptable.

5. Barrel length shall be coordinated with specific conditions.

6. Finish: Locks shall have satin nickel or satin chrome finish.

7. Keying:
   a. Key quantities: Provide two keys per lock. Provide four copies of any master/ grand master keys.
b. Key system:
   1). Key system shall support a minimum of 2000 different keys.
   2). Key system shall support up to three levels of master keys (grand-master keys, master keys, and sub-master keys) in addition to individual keys.

c. Key cylinder type:
   1). Coordinate key type with owner.

d. Key schedule: Refer to drawings and coordinate key schedule with Owner.

8. Key engraving:
   a. Keys to be engraved with an identification number corresponding to the layout of unique keys on the project. All identical keys shall be engraved with the same number.
   b. At laboratories with multiple, individually-locked drawers where number plates are indicated, engrave each key with number to match the number plate on each drawer.

9. Manufacturers:
   a. Swinging Doors and Drawers:
      1). Illinois Lock Company, 301 West Hintz Rd., Wheeling, IL 60090 Tel: 847 537-1800.
      2). National Cabinet Lock, 200 Old Mill Rd., P. O. Box 200, Mauldin, South Carolina 29662 Tel: 864 297-6655.
      4). Approved substitution.

K. Padlock Hasps: Provide one of the following:
   1. Stainless steel padlock-eye cam-type locking device and strike plate at cabinet locations as indicated on the drawings. Strike plate, or protection plate, shall be large enough to prevent padlock from damaging door or drawer front.
   2. Barrel-style cam-type padlock hasp sized to fit standard lock cylinder hole with finish to match drawer pulls, and strike plate at cabinet locations as indicated on the drawings. Strike plate, or protection plate, shall be large enough to prevent padlock from damaging door or drawer front.
   3. Cam-lock shall engage or strike into a metal casting.
   4. Manufacturers:
      a. Northeast Lock Corporation, 48 Oak St., Clifton, NJ 07014 Tel: 800 524-2575.
      d. Approved substitution.
   5. Provide 15% (Fifteen Percent) of total quantity of complete padlock hasp assemblies as additional spare parts, bagged, boxed, and clearly labeled.

L. Glides: Non-marring material, 1 inch (25 mm) diameter, minimum, with at least 5/8 (16 mm) vertical adjustment. Provide on movable tables, unless otherwise indicated.

M. Leveling devices: Provide each table leg with 3/8 inch (10 mm) minimum diameter leveling bolt and floor clip.
N. Leg shoes: Leg shoes shall be provided on all legs and table legs to conceal leveling devices, except for tables with casters. Shoes shall be 2 ½ (63 mm) inch high and of black rubber or pliable black vinyl material. Use of a leg shoe which does not conceal leveling device is not acceptable.

O. Floor clips: Provide leg assemblies and fixed table legs with floor clips securely fastened to the floor after shimming.

P. Casters: Where indicated on Laboratory Furnishing drawings, provide sets of 3 ½ inch (89 mm) diameter wheels with self-lubricating bearing, rated to carry 250 pounds (113 kg) minimum each. Each caster must swivel and have a locking brake. Wheel shall be of molded polyurethane tread mechanically locked to a polyolefin core.

1. Material: Caster shall be heavy gauge cold rolled steel with bright zinc plating.
2. Manufacturers:
   a. Acorn Industrial Products Co., 7 Union Hill Dr., W. Conshohocken, PA 19428 Tel: 800 523-5474.
   b. Caster Technology Corporation, 3265 Whipple Rd., Union City, CA 94587, Tel: 510 429-6727.
   d. Approved substitution.

Q. Support Struts and Service Ledging: Refer to specifications for slotted channel framing in this Section.

2.4 LABORATORY WORK SURFACES

A. Epoxy Resin:

1. Manufacturers: Products complying with this specification may be provided by the following manufacturers.
   b. Durcon Laboratory Tops, Inc., 206 Allison Drive, Taylor, TX 76574 Tel: 512 595-8000.
   c. Kewaunee Scientific Corporation, P O Box 1842, Statesville, NC 28687 Tel: 704 873-7202.
   d. Approved substitution.

2. Thickness:
   a. Typical work surface: 1 inch (25 mm).
   b. Fume hood work surfaces: Tops shall be 1¼ (32 mm) inches thick at outer edge, indented minimum ¼ inch (6 mm) to provide a raised rim around all exposed edges 1 inch (25 mm) wide, minimum, or as to allow for the fume hood sash. The front top edge of the raised rim and exposed vertical corners of the top shall be rounded or chamfered to a 1/8 inch (3 mm) radius. The juncture between the raised rim and the top surface shall be coved or chamfered to a ¼ inch (6 mm) radius.
   c. Curbs and Splashes: ¾ inch (19 mm).

3. Color:
   a. Base Bid: Black
b. Add Alternative Bid: Graphite as manufactured by Durcon Laboratory Tops, Inc., or approved substitution.

c. Color sample to be approved by Architect before work is put in hand.

4. Description:

a. Monolithic filled epoxy resin work surface consisting of a polymerized cast resin material oven-cured in molds.

b. Drip Grooves: Provide under all work surface exposed edges, unless noted otherwise on the Laboratory Furnishing Drawings. Drip grooves shall be ½ inch (13 mm) from the front edge where the top overhangs 1 inch (25 mm) and ¼ inch (6 mm) from the edge where the edge overhangs ½ inch (13 mm).

c. Edge profile: For all exposed upper edges and corners:

1) Bevel eased: 1/8 inch (3 mm) machined bevel with blended radius corners.

d. Sink Mounting:

1) Drop-in Sink Cutouts: Cutouts shall be profiled to provide support for the sink, and to ensure that the rim of the installed sink is 1/8 inch (3 mm) below the surrounding work surface level or bottom of drain grooves, if present. The top edge of the cutout shall have 1/8 inch (3 mm) bevel. Ensure that there shall be no gaps between the installed sink rim and work surface.

e. Curbs and Splashes:

1) Height: 4 inches (100 mm), unless noted otherwise on Laboratory Furnishing Drawings.

2) Bonded to the surface of the top to form a square joint.

f. Provide all holes and cutouts as required for built-in equipment and mechanical and electrical service fixtures. Verify size of opening with actual size of equipment to be used prior to making openings. Form inside corners to a radius of not less than 1/8 inch (3 mm). After sawing, rout and file cutouts to ensure smooth, crack-free edges. Seal exposed edges after cutting with a waterproofing material recommended by the manufacturer.

g. Provide full-length, one-piece tops and backsplashes wherever possible, and keep field joints to an absolute minimum.

5. Physical Properties:

a. Chemical resistance:

1) Organic solvents: A cotton ball, saturated with the test chemical, is placed in a one ounce bottle with a reservoir of liquid above the ball. The container is inverted on the test material surface for a period of 24 hours. Test temperature: 23°C ±2°C.

2) Other test chemicals: Five drops (1/4 cc) of the test chemical are placed on the test material surface. The chemical is covered with a 1 inch diameter watch glass for a period of 24 hours. Test temperature: 23°C ±2°C.

3) Evaluation: After 24 hours exposure, exposed areas are washed with water, then a detergent solution, finally with naphtha, then rinsed with distilled water, dried with a cloth, and rated as follows:

<table>
<thead>
<tr>
<th>Rating</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No effect No detectable change in the material surface.</td>
</tr>
<tr>
<td>1</td>
<td>Excellent Slight detectable change in color or gloss but no change in function or life of the surface.</td>
</tr>
</tbody>
</table>
2. Good: A clearly discernable change in color or gloss but no significant impairment of surface life or function.

3. Fair: Objectionable change in appearance due to discoloration or etch, possibly resulting in deterioration of function over an extended period of time.

4. Failure: Pitting, cratering, or erosion of the surface. Obvious and significant deterioration.

4). Test results:

b. Heat resistance:
1). High temperature test: A porcelain crucible is heated to a dull red color, placed on the test material, and allowed to cool to ambient temperature. Result: No observable surface deformation.

2). Flame test: A 3/8 inch (10 mm) Bunsen burner is adjusted to a quiet flame with a 1 1/2 inch (38 mm) inner cone, overturned on the test material, and allowed to stay for 5 minutes. Result: no observable surface deformation.

B. Static Dissipative High-Pressure Plastic Laminate Tops:

1. Manufacturers: Products complying with this specification may be provided by the following manufacturers.
   a. Nevamar Decorative Surfaces, 8339 Telegraph Road, Odenton MD 21113
      Tel: 410 551-5000.
   b. Pionite Decorative Surfaces, One Pionite Road, Auburn, ME 04211 Tel: 800 746-6483.
   c. Approved substitution.

2. Type: Static dissipative laminate work surface and electrical grounding system installed to minimize the risk of static electricity damage to sensitive devices.

3. Substrate Thickness:
   a. Typical work surface: 1 inch (25 mm).
   b. Curbs and Splashes: ¾ inch (19 mm).

4. Color: To be selected by Architect.

5. Description:
   a. High-pressure decorative laminate consisting of a resin formulation applied over the decorative surface paper. The decorative paper shall be treated with melamine resin, and the core shall consist of kraft papers impregnated with phenolic resin. Sheets shall be bonded under high temperature and pressure. Horizontal post-forming grade static dissipative plastic laminate sheet to NEMA LD 3-1995.
   b. Finish: Fine beaded “crystal” texture to minimize smudges and finger marks, and to provide optimum scratch resistance.
   c. Core material: Hardwood veneer-core plywood.
      1). Description: A one step calibrated core +/- 0.5mm (to avoid voids) with type 1 waterproof nauf glue. Grade 2 face, and back of mill choice plywood veneer.
      2). Thickness/Plies:
         a). ¾ inch (19 mm): minimum 7-ply.
         b). 1 inch (25 mm): minimum 9-ply.
      3). Physical Properties:
         a). Average modulus of rupture: 7346 psi (50.65 N/mm²).
b. Face Screw Holding Strength: 355 lbf (1579 N).

d. Backing sheets: High-pressure phenolic meeting or exceeding NEMA Standard LD3-2005 Grade BKL.

e. Plastic laminate adhesive: High-pressure decorative laminate shall be bonded to core with thermosetting resorcinol or phenol-resorcinol adhesive, or as recommended by the manufacturer for the application, at temperature above 65 degrees Fahrenheit (18°C) at a pressure no less than 15 pounds per square inch (103 kPa). Laminate core is not to exceed 10% moisture content and is to be laminated and cured in a controlled environment between 45% and 60% RH.

f. Edging: Tops shall be edged with 3 mm PVC edge banding set in hot melt adhesive. Adhesive shall have a minimum softening point of 150 degrees Fahrenheit (65°C). Apply primer to substrate when recommended by adhesive manufacturer.

g. Flush mount insert grounding system: The work surface installation shall be provided with effective electrical grounding to ensure the safe dissipation of static electricity to ground. Coordinate with Division 26. Connection to the work surface laminate shall be of the flush surface. Projecting connectors and exposed terminals will not be accepted. Components shall include flat socket cap screw to secure brass insert, knurled brass insert to provide electrical connection, flat washer to provide flat surface for securing ring terminals, ring terminal to connect wire to flush mount insert, and nut to fasten flush mount insert together.

h. Personnel grounding system: Provide dual banana jack terminals, 10 feet (3 m) of 22 gauge wire, and 2 banana plug connections in front of work surface grounded to the flush mount insert system.

j. Electrical performance:

1). Point to point resistance (per EOS/ESD–S4.1):
   2). 60% to 40% RH: $10^6$ to $10^7$ ohms.
   3). 40% to 20% RH: $10^7$ to $10^8$ ohms.
   4). 20% to 10% RH: $10^8$ to $10^9$ ohms.

5). Point to ground resistance (per EOS/ESD–S4.1):
   6). 60% to 40% RH: $10^6$ to $10^7$ ohms.
   7). 40% to 20% RH: $10^7$ to $10^8$ ohms.
   8). 20% to 10% RH: $10^8$ to $10^9$ ohms.

9). Volume resistance (measured face to back at 72°F (22.2°C), 100V with a LCD Megohmmeter, Item No. 19770, NFPA Electrodes (2.5 inch (63 mm) diameter, 5 lb (2.27 kg)):
   10). 60% to 30% RH: $10^6$ to $10^8$ ohms.
   11). 30% to 10% RH: $10^8$ to $10^9$ ohms.

12). Static Decay (FTMS 101C, Method 4046 test):
   13). 50% RH: 0.01 sec.
   14). 10% RH: 0.02 sec.

k. Provide all holes and cutouts as required for built-in equipment and mechanical and electrical service fixtures. Verify size of opening with actual size of equipment to be used prior to making openings. Form inside corners to a radius of not less than 1/8 inch (3 mm). After sawing, rout and file cutouts to ensure smooth, crack-free edges.

l. Provide full-length, one-piece tops and backsplashes wherever possible, and keep field joints to an absolute minimum.

m. Curbs and Splashes:

1). Height: 4 inches (100 mm), unless noted otherwise on Laboratory Furnishing Drawings.
2). Fabricate similar to top with PVC edge band along exposed ends.
3). Splash shall be set in a thin bead of silicone sealant to prevent moisture migration through the joint.

n. Physical Properties:

2). Minimum Thickness: 0.036 inches ± 0.005 inches (0.9 mm ± 0.08 mm).
3). Cleanability: 5 cycles (NEMA LD3 test method 3.4).
4). Boiling Water Resistance: Moderate effect (NEMA LD3 test method 3.5).
6). Ball Impact Resistance: 35 inches (889 mm) (NEMA LD3 test method 3.8).
8). Dimensional change:
9). Machine direction: 0.40% (NEMA LD3 test method 3.11).
10). Cross direction: 0.80% (NEMA LD3 test method 3.11).
12). Appearance: No ABC defects.
15). Stain Resistance Performance Test Results: The surface shall show essentially no effect on Black (Lab grade) plastic laminate when left in contact for 16 hours either when reagents were kept covered or allowed to evaporate.

C. Stainless Steel: Refer to Stainless Steel Fabrications section of this specification.

D. Solid Laminated Wood Tops:
   1. Edge grain maple laminations with edge grain exposed.
   2. Thickness:
      a. 1¾ inch (44 mm)
   3. Composed of solid hard maple strips 1¾ inches (44 mm) wide, glued with water-resistant resin under heavy pressure side to side and end to end.
   4. Curbs and splashes to be ¾ inch (18mm) thick matching material, 4 inches (100mm) high.
   5. Round top edges and corners. Plane and sand smooth all surfaces.
   6. Provide full-length, one-piece tops and backsplashes wherever possible, and keep field joints to an absolute minimum.
   7. Finish:
      a. Finish with three coats of moisture and chemical resistant varnish coating applied to all surfaces and edges. Fine sand between coats.
   8. Manufacturers:
      a. Bally Block Co., P.O. Box 188, Bally, Pennsylvania 19503.
      b. Michigan Maple Block Co., P.O. Box 245, Petoskey, Michigan 49770.
      c. Approved equal.

2.5 ELECTRONICS BENCH

A. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.
   1. Edsal Manufacturing Company, Inc., 4400 South Packers Avenue, Chicago, IL 60609 Tel: 773 254-0600.
   2. Production Basics, Inc., 31 Dunham Road, Billerica, MA 01821 Tel: 617 926-8100.
   3. Tennsco, P.O. Box 1888, Dickson, TN 37056-1888 Tel: 800 251-8184.
   4. Workstation Industries, 1938 E. Pomona Street, Santa Ana, CA 92705 Tel: 714 258-7535.
   5. Approved substitution.

B. Electronics Bench: Provide heavy duty, steel frame bench as detailed on the Laboratory Furnishing drawings. Basis of design models:
   1. Edsal Manufacturing Electronic Tech Bench.
   2. Production Basics RTW Table.
   3. Tennsco Technical Workstation.

C. Characteristics:
   1. Dimensions: As indicated on the Laboratory Furnishing drawings.
   2. Materials: Table structure constructed of minimum 16 gauge steel.
      a. Finish: Electrostatically applied epoxy powder coating.
      b. Color: As selected by the Architect.
3. Adjustable Height Legs: Worksurface shall be adjustable in height in 1 inch increments from 30 inches to 36 inches.
5. Upper Shelf: 1-1/4 inch-thick, electro-static-dissipative (ESD) plastic laminate on industrial-grade particleboard core, supported by risers units at each side, or legs at each corner.
6. Load Capacity of Worksurface and Shelf: 40 pounds per square foot.
7. Electrical:
   a. Provide a minimum of (8) 120 V duplex outlets below the shelf and not obstructing the work surface. Outlets can be on the riser units, or within an integrated raceway directly below the upper shelf.
   b. Provide master on/off switch.
   c. Provide a 96 inch long minimum power cord with NEMA 5-20 plug.
   d. Provide ground wire for each ESD surface.

2.6 SHELVING ASSEMBLIES

A. High-Pressure Decorative (Plastic) Laminate Shelving:
1. Manufacturers/Facing material: Products complying with this specification may be provided by the following manufacturers.
   a. Nevamar Decorative Surfaces, One Nevamar Place, Hampton, SC 29924 Tel: 800 638-4380.
   b. Pionite Decorative Surfaces, One Pionite Road, P.O. Box 1014, Auburn, ME 04211 Tel: 800 746-6483.
   c. Wilsonart International, 2400 Wilson Place, P. O. Box 6110, Temple, TX 76503 Tel: 800 433-3222.
   d. Approved substitution (no known equal).
2. Approved Products:
   b. Pionite ChemGuard.
   c. Wilsonart ChemSurf
3. Color: To be selected by Architect.
4. Description:
   a. High-pressure decorative laminate, meeting or exceeding NEMA Standard LD3 2005 Grade HGP, HGL, or HGS requirements, consisting of a resin formulation applied over the decorative surface paper to achieve chemical resistance. The decorative paper shall be treated with melamine resin, and the core shall consist of kraft papers impregnated with phenolic resin. Sheets shall be bonded under high temperature and pressure. Product shall be developed for casework, work surface, and shelving surfaces in laboratories.
   b. Laminate shall be applied to top and bottom surfaces.
   c. Finish: Fine pebble-grained “crystal” texture or matte texture with slight sheen to minimize smudges and finger marks, and to provide optimum scratch resistance.
      1). Gloss: 15-16 +/- 3 gloss units.
   d. Physical Properties:
      2). Minimum Thickness: 0.038 inches ± 0.005 inches (0.97 mm ± 0.13 mm).
3). Cleanability: 10 cycles (NEMA LD3 test method 3.4).
4). Boiling Water Resistance: No effect (NEMA LD3 test method 3.5).
7). Ball Impact Resistance: 60 inches (1524 mm) (NEMA LD3 test method 3.8).
9). Dimensional change:
10). Machine direction: 0.50% (NEMA LD3 test method 3.11).
11). Cross direction: 0.80% (NEMA LD3 test method 3.11).
12). Wear resistance: 1,500 cycles, min. (black); 700 cycles, min. (other colors) (NEMA LD3 test method 3.13).
14). Stain Resistance Performance Test Results: The surface shall show essentially no effect on Black (Lab grade) plastic laminate when left in contact for 16 hours either when reagents were kept covered or allowed to evaporate.

| 0 | No effect | No detectable change in the material surface. |
| 1 | Excellent | Slight detectable change in color or gloss but no change in function or life of the surface. |
| 2 | Good | A clearly discernable change in color or gloss but no significant impairment of surface life or function. |
| 3 | Fair | Objectionable change in appearance due to discoloration or etch, possibly resulting in deterioration of function over an extended period of time. |
| 4 | Failure | Pitting, cratering, or erosion of the surface. Obvious and significant deterioration. |

5. Plastic laminate adhesive: High-pressure decorative laminate shall be bonded to core with thermosetting resorcinol or phenol-resorcinol adhesive, or as recommended by the manufacturer for the application, at temperature above 65°F (18.3°C) at a pressure no less than 15 pounds per square inch. Laminate core is not to exceed 10% moisture content and is to be laminated and cured in a controlled environment between 45% and 60% RH.

6. Core material: Hardwood Veneer Plywood.
a. Description: A one step calibrated core +/- .5mm (to avoid voids) with type 1 waterproof nauf glue. Grade 2 face, and back of mill choice plywood veneer.

b. Thickness/Plies:
   1) 1 inch (25 mm): minimum 9-ply.

c. Physical Properties:
   1) Average modulus of rupture: 7346 psi (50.65 N/mm²).
   2) Face Screw Holding Strength: 355 lbf (1579 N).

7. Edging:
   a. Unless otherwise indicated, all edges shall be edgebanded with 3 mm PVC edge banding set in hot melt adhesive. Adhesive shall have a minimum softening point of 150°F (65.6°C). Apply primer to substrate when recommended by adhesive manufacturer. Contact cement is not acceptable. Color of edgebanding to be selected by the Architect.

B. Safety Edges:
   1. Types:
      a. Retainer Rail: ¼ inch (6 mm) diameter stainless steel retainer rail, as indicated on the drawings.
   2. Refer to the description of each system below for locations of each type.

C. Reagent Shelves on adjustable shelf standards with a steel tube support system.
   1. Shelving: High-Pressure Decorative Laminate shelving as specified above.
   2. Steel Frame Support System: Provide cold rolled steel tube vertical and horizontal support members with radiused edges. All members shall be welded together. Grind all welds smooth and polish to produce clean smooth appearance with no visual evidence of welds after paint is applied. All vertical members shall be one piece continuous from floor to underside of structure above or to top horizontal member as indicated on the drawings. Horizontal top and intermediate members shall be one piece between vertical members. Provide welded caps at all open ends of tube sections. Secure vertical members to floor slab, underside of benchtop, if indicated on the drawings, and to underside of structure above.
      a. Tube steel dimensions:
         1) 2 inches x 2 inches, 12 gauge (50 x 50 x 2.8 mm).
   3. Shelf standards:
      a. Steel tubes shall be punched to receive adjustable shelf brackets. Pattern shall match Knape & Vogt 85 ANO series uprights, length in accordance with drawings.
   4. Shelf Brackets: 16 gauge (1.6 mm thick) bookend type, as detailed on drawings.
   5. Safety edging:
      a. Front Edge:
         1) Retainer rail.
      b. Rear edge:
         1) Retainer rail.
   6. Load capacity: System shall support a minimum of 35 pounds per square foot applied at all shelves simultaneously. Maximum deflection shall be 0.35 inches (9mm) under load.
7. Finish: Factory-finish steel tube support system, shelf standards, and brackets with epoxy powder coating. Color to be selected by the Architect.

D. Adjustable Wall Shelves:
1. Shelving: High-Pressure Decorative Laminate shelving as specified above.
2. Double Slot Shelf Standards:
   a. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.
      1). Knape & Vogt Manufacturing Company, 2700 Oak Industrial Drive NE, Grand Rapids, MI 49505 Tel: 616 459-3311.
      2). Approved substitution.
   b. Basis of Design: Knape & Vogt 85 ANO series uprights, or equal. Length as indicated on the drawings.
3. Shelf Brackets: 16 gauge (1.6 mm) bookend type, as detailed on drawings.
4. Safety edging:
   a. Front Edge:
      1). Retainer rail.
   a. Front and side edges (where indicated):
      1). Retainer rail.
5. Load capacity: System shall support a minimum of 35 pounds per square foot applied at all shelves simultaneously. Maximum deflection shall be 0.35 inches (9mm) under load.
6. Finish: Factory finish standards and brackets with epoxy powder coating. Color to be selected by the Architect.

E. Chemical Resistant Shelf Units:
1. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.
   a. InterMetro Industries Corporation, 651 North Washington St., Wilkes-Barre, PA 18705 Tel: 800 992-1776. Manufacturer of Metro product range.
   b. Eagle Group, 100 Industrial Blvd., Clayton, DE 19938 Tel: 302 653-3000.
   c. Approved substitution.
2. Description: Chemical-resistant polymer shelving, posts, components and accessories.
3. Basis of Design: MetroMax storage system, floor-mounted post supported, or equivalent.
   a. Posts: floor mounted polymer posts, adjustable at 1 inch (25 mm), minimum, increments, length as shown on drawings, Metro PE series or equal.
   b. Shelves: Open grid design with post connectors, Metro GX2 series or equal.
      1). Provide solid shelf mat, Metro FX2 series or equal.
   c. Provide diagonal bracing for lateral stability at freestanding applications.
   d. Accessories:
      1). Foot Plate: stainless steel with adjustable leveling bolt for polymer shelving, Metro No. 9993S or equal.
      2). Post Clamps: Zinc-plated, to join adjacent polymer posts, Metro No. 9994Z or equal.
3). Shelf Ledges: Stackable, 2 inch (51 mm) high polymer, Metro No. LxxxX-2S or equal, sized to match shelf.

2.7 MODULAR PARTS BINS

A. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.

1. Lyon Metal Products, P. O. Box 671, Aurora, IL 60507 Tel: 800 323-0096.
2. Penco Products, Inc., P. O. Box 378, 99 Brower Ave., Oaks, PA 19456 Tel: 800 562-1000.
3. Hallowell, Division of List Industries Inc., 5711 Distribution Dr., Memphis, TN 38141 Tel: 901 375-0022.
4. Approved substitution

B. Basis of Design: Lyon Metal Products 8000 Series with Modular Drawers, Shelves, and Accessories as noted.

C. Features:

1. Premium grade 18 gauge (1.0 mm thick) steel drawer and shelf unit comprised of modular drawers and adjustable shelves on 1 ½ inch (38 mm), maximum, increments, and 84 inches (2134 mm) high 14 gauge (2.0 mm thick) closed post supports with solid panels. Size in accordance with Laboratory Furnishings plans and details.
2. Drawers to operate on smooth rolling ball-bearing suspension, which supports loads up to 400 pounds per drawer.
3. Each drawer features full length roll-formed steel handles with 1-1/4” label holders.

D. Required Accessories and Options:

1. Provide pre-engineered modular drawer steel partitions and aluminum dividers as noted on drawings, sized for the drawer heights shown.
2. Back Panel with Back-to-Shelf Clips
3. Drawer Finishing Strips
4. Base Strips
5. Drawer Guide Supports
6. Shim Plates
7. Anchor Feet

E. Color: Selected by Architect from manufacturer’s full color line.

F. Provide all components required for a complete finished and functioning assembly including all bolts, clips, and all other parts necessary.

2.8 CYLINDER RACKS AND RESTRAINT ASSEMBLIES

A. Cylinder Rack Assembly:

1. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.

   a. Kumar Industries, 4775 Chino Avenue, Chino, CA 91710 Tel: 909 591-0722.
a. Matheson Tri-Gas, 166 Keystone Drive, Montgomeryville, PA 18936 Tel: 215 648-4000.
a. Scott Specialty Gases, Inc., 6141 Easton Road Box 310, Plumsteadville, PA 18949 Tel: 215 766-8861.
b. Approved substitution.

2. Frame members: 2 inches x 2 inches x 1/8 inch (50 x 50 x 3 mm) square steel tube.
3. Construction: Refer to the Laboratory Furnishings drawings for details. Construction to be fully welded. Weld cover plates to close exposed tube ends. Grind and polish all welds to produce smooth surface with no visible evidence of welding when painted. Sizing:
   a. Size typical units to accommodate standard-size laboratory gas cylinders.
   b. Where shown on drawings, size units to accommodate liquefied gas dewars.
4. Chain: Provide restrainers of 5/16 inch diameter, Type 304 stainless steel welded chain fitted with stainless steel snap shackle with swivel clevis and split ring for each bracket; McMaster-Carr Supply Company, Suncor Marine & Industrial, Inc., or approved substitution.
5. Cylinder rack steel components shall be factory-finished to match the casework metal color as selected for the project.

B. Cylinder Restraint Assembly:
1. Framing channel, Fittings, Swivel Hangers, and End Caps: Slotted channel framing as specified elsewhere on this Section.
2. Provide two swivel hangers per cylinder or dewar per wall bracket
3. Sizing:
   a. Size typical units to accommodate standard-size laboratory gas cylinders.
   b. Where shown on drawings, size units to accommodate liquefied gas dewars.
4. Chain: Provide restrainers of 5/16 inch diameter, Type 304 stainless steel welded chain fitted with stainless steel snap shackle with swivel clevis and split ring for each bracket; McMaster-Carr Supply Company, Suncor Marine & Industrial, Inc., or approved substitution.
5. Cylinder restraint steel components shall be factory-finished to match the casework metal color as selected for the project.

2.9 PIPE DROP ENCLOSURE
A. Fabricate pipe drop enclosures from minimum 18 gauge (1.3 mm thick) galvanized steel, per details shown on the Laboratory Furnishings drawings, except as noted.
1. Pipe drop enclosures at the following locations shall be fabricated of 18 gauge, Type 304 stainless steel with a No. 4 finish:
   a. At scullery sinks.
   b. At stainless steel counters.
B. Seal all joints between dissimilar metals and at all panel seams with clear silicone sealant.
C. Materials and finish shall be as specified under Metals Fabrications in this Section.
2.10 DRYING RACK

A. Stainless Steel Drying Rack with White Polypropylene Pegs:

1. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.
   a. Inter Dyne Systems, Inc., 676 Ellis Road, Norton Shores, MI 49441 Tel: 231 799-8760.
   b. Approved substitution (no known equal).

   a. Drying rack bodies shall be of one-piece design and of not less than 20 gauge (1.0 mm thick) Type 304 stainless steel with a No. 4 finish. The top shall have two 90-degree bends, and sides to have one 90 degree bend.
   b. Each rack shall have an integral full-width 20 gauge (1.0 mm thick), Type 304 stainless steel drip trough with stainless steel drain tube. Drip trough shall be continuously welded.
   c. The trough shall have a full-length, Type 304 stainless steel wire mesh screen insert. Screen insert shall be turned down on all four sides to provide a clean and finished appearance.
   d. Each rack front shall be dimensioned and punched with T-shaped holes to accommodate the peg arrangement shown on the drawings.

3. Pegs shall fit into the punched holes in the rack front. A T-shaped protrusion on the base of the pegs shall allow easy removal and replacement without the need for tools. The T-shaped holes shall be designed to fit the protrusion on support pegs for holding single or multiple utensil drip trays, drain shelves, funnel racks or pipette holders. Pegs shall be of injection-molded white polypropylene.

4. Provide wall hangers for each rack, designed to enable the removal and replacement of the entire rack for cleaning without the need for tools.

5. Provide stainless steel fixing screws of appropriate type for attachment to support structure.

6. Provide clear, tight-fitting hose to drain from drip trough drain tube into sink.

7. Provide finished stainless steel back panel when any portion of the back of drying rack is exposed.

2.11 CABLE / VACUUM LINE THROUGH PORT (STAINLESS STEEL BENCHTOP SLEEVE/GROMMET)

A. Provide 3 inch (75 mm) diameter wire or cable access through ports of Type 304 stainless steel with No. 4 finish at bench tops as located and detailed on the Laboratory Furnishings drawings.

2.12 PLASTIC GROMMET AND OTHER ACCESSORIES

A. Round Grommets:

1. Size: 2 3/8 inch (60 mm) O.D.
2. Material: Plastic
3. Accessories: Removable slotted plastic cover
4. Color: To be selected by Architect.
6. Refer to plans for location.
7. Manufacturers: Products complying with this specification may be provided by the following manufacturers.
   a. Doug Mockett & Company, Inc., Box 3333, Manhattan Beach, CA 90266 Tel: 800 523-1269.
   b. Häfele America Inc., 3901 Cheyenne Dr., P. O. Box 4000, Archdale, NC 27263 Tel: 336 889-2322.
   c. Approved equal.

B. Utility Management Hook
   1. Type 303 stainless steel hook with polished finish.
   2. Size: 4 23/32 inch tall, 2 43/64 inch wide.
   3. Load capacity: 22 pounds.
   5. Manufacturer: McMaster Carr, P.O. Box 54960, Los Angeles, CA 90054-0960 Tel: 562 692-5911, or approved equal.

C. Grilles
   1. Air intake grilles: Perforated metal mesh in a metal frame.
   2. Sizes: As shown on drawings.
   6. Manufacturer: Doug Mockett & Co., Inc. P.O. Box 3333, Manhattan Beach, CA 90266 Tel 800 523-1269 or approved equal.

D. Backpack Hooks

2.13 FINISH FOR MISCELLANEOUS WOOD ITEMS

A. Applicability: This section applies to wood fabrications, including, but not limited to, wood laboratory tables, wood-framed balance tables, wood-framed pegboards, and wood filler panels.

B. Finish:
   1. Manufacturer may uses either of the following finish systems:
      a. Customized, high-solids, cross-linked, ultraviolet light (UV)-cured coating developed for durability, including abrasion, chemical, impact, and scratch resistance, for flat-line applications. Coatings shall have little or no VOCs. Chemical-resistant modified acrylic urethane finish with built-in UV blocker, or equal, applied over permanent wood stain.
   2. Stain Color:
      a. Match No. 102 Seaside Oak as manufactured by Kewaunee Scientific Corporation, subject to Architect’s approval.
   3. Application:
      a. Finish application and sequence shall be as recommended and designed by the manufacturer for a high quality, laboratory-grade wood casework finish.
      b. Preparation: Sand exposed surfaces smooth, free from dirt and defects.
c. Stain application: Apply stain of color selected to all exposed casework surfaces. Apply in a manner to achieve a match with the selected color sample upon completion of application of the finish.

d. Finish application: Apply top finish to all stained surfaces. Finished surfaces shall be even, water-clear and bright. Cloudy or muddy finishes carrying tinting pigments will not be acceptable.

e. Stain Color:
   1) Match No. 102 Seaside Oak as manufactured by Kewaunee Scientific Corporation, subject to Architect’s approval.

C. Wood Finish Chemical Resistance Performance Requirements:

1. Manufacturer shall submit wood finish chemical resistance performance test results. Testing to be performed by independent testing agency.

2. Procedure: Place panel on a flat surface, clean with soap and water and blot dry. Condition the panel for 48 hours at 73 +/- 3 degrees Fahrenheit (23º +/- 2ºC) and 50 +/- 5% relative humidity or the currently accepted guideline set by ASTM. Test the panel for chemical resistance using forty-nine different chemical reagents by one of the following methods. For both methods, leave the reagents on the panel for a period of one hour. Wash off the panel with water, clean with detergent and naptha, and rinse with deionized water. Dry with a towel and evaluate after 24-hours at 73º +/- 3ºF (23º +/- 2ºC) and 50 +/- 5% relative humidity, or the currently accepted guideline set by ASTM.

   a. Method A: Test volatile chemicals by placing a cotton ball saturated with reagent in the mouth of a one-ounce (29.574cc) bottle and inverting the bottle on the surface of the panel.

   b. Method B: Test non-volatile chemicals by placing five drops of the reagent on the surface of the panel and covering with a 24mm watch glass, concave side down.

3. Rating System: Evaluations shall use the following rating system:

   - Level 0: No detectable change.
   - Level 1: Slight change in color or gloss.
   - Level 2: Slight surface etching or severe staining.
   - Level 3: Pitting, cratering, swelling, or erosion of coating. Obvious and significant deterioration.

4. Acceptance Level:

   a. Individual test results for the specified 49 reagents shall be within the Range for that reagent as specified on the table below.

   b. There shall be no more than four (4) Level 3 conditions.

5. Table of reagents:

#### 2.14 METAL FABRICATIONS

**A. Applicability:** This section applies to metal fabrications, including, but not limited to, pipe drop enclosures, radioisotope storage cabinets, shelving support systems, metal-framed laboratory tables, metal-framed balance tables, cylinder racks, utility ceiling tiles, and other miscellaneous brake-formed and shop fabricated components and trim, such as required for overhead service carriers.

**B. Manufacturers:** Products complying with this specification may be provided by the following manufacturers, and/or other manufacturers that may be listed under individual products within this specification.

1. Kumar Industries, 4775 Chino Avenue, Chino, CA 91710 Tel: 909 591-0722.
2. Approved substitution.

C. Materials:

1. Steel: Cold-rolled furniture stock sheet steel, prime grade, roller leveled.
   a. Steel shall be treated at the mill to be free of scale, ragged edges, deep scratches, or other injurious effects.
   b. All gauges indicated are to be U.S. standard.

D. Finish Requirements:

1. Paint finish for steel laboratory products shall utilize a dry coating process with minimal waste generation. Liquid-applied coatings shall not be acceptable. Manufacturer shall supply documentation that waste generated during the painting process, is a solid, non-hazardous material.
   a. Pretreatment: Finish process shall incorporate a phosphate conversion coating during the pretreatment/cleaning operation.
   b. Operator Protection: The painting process shall be cleanly contained, have no solvent odor and be performed in an air-conditioned room.
   c. VOC (Volatile Organic Compounds) emissions shall not exceed 0.29 pounds per gallon (35 g/L).
   d. Offgasing: No further emissions or “Offgasing/Decomposition” vapors shall occur at room temperature from installed finished parts.

2. Preparation: After the units have been completely welded together and before finishing, they shall be given a pre-paint treatment to provide excellent adhesion of the finish to the metal and to aid in the prevention of corrosion. Physical and chemical cleaning of the metal shall be accomplished by washing with an alkaline cleaner, followed by a spray treatment with a heated cleaner/phosphate solution and pretreated with iron phosphate spray followed by a neutral final seal prior to application of final finish. The strength of each solution shall be monitored by filtration to insure consistent quality. All treated parts shall be immediately dried in heated ovens and gradually cooled before application of the finish. Treated metal parts shall be clean and properly prepared to provide optimum adhesion of finish and resistance to corrosion.

3. Application: Electrostatically apply powder coat of selected color and bake in controlled high temperature oven to assure a smooth, hard satin finish. Surfaces shall have a chemical resistant, high grade laboratory furniture quality finish of the following thicknesses:
   a. All surfaces, exterior or interior, exposed to view, shall receive sufficient powder coat to achieve an average 1.5 mil (38 µm) film thickness with a minimum 1.2 mil (30 µm) film thickness and shall have smooth satin luster.
   b. Backs of cabinets and other surfaces not exposed to view shall have sufficient powder coat to achieve an average 1.0 mil (25 µm) film thickness.

4. All drawer bodies to be finished in matching color.

5. Concealed interior parts shall receive corrosion-resistant treatment.

6. Finish must be UV stable.

7. Color: As selected by the Architect.

E. Finish Performance Requirements:

1. Manufacturer shall submit metal finish performance testing results. Testing to be performed by independent testing agency.

2. Chemical Resistance:
a. Test procedure: Place samples on a flat surface, clean with soap and water and blot dry. Condition the panel for 48 hours at 73 +/- 3 degrees Fahrenheit (23(+ 2°C) and 50+ 5% relative humidity, or the currently accepted guideline set by ASTM. Test the samples for chemical resistance using forty-nine different chemical reagents by one of the following methods. For both methods, leave the reagents on the sample for a period of one hour. Wash off the sample with water, clean with detergent and naptha, and rinse with deionized water. Dry with a towel and evaluate after 24 hours at 73 +/- 3 degrees Fahrenheit (23°± 2°C) and 50± 5% relative humidity, or the currently accepted guideline set by ASTM

1). Method A: Test volatile chemicals by placing a cotton ball saturated with reagent in the mouth of a 1 ounce (29.574cc) bottle and inverting the bottle on the surface of the sample. The cotton ball shall remain in contact with the sample for the duration of the test.

2). Method B: Test non-volatile chemicals by placing five drops of the reagent on the surface of the sample and covering with a 24mm watch glass, convex side down.

b. Rating System: Evaluations shall use the following rating system:

<table>
<thead>
<tr>
<th>Level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No detectable change.</td>
</tr>
<tr>
<td>1</td>
<td>Slight change in color or gloss.</td>
</tr>
<tr>
<td>2</td>
<td>Slight surface etching or severe staining.</td>
</tr>
<tr>
<td>3</td>
<td>Pitting, cratering, swelling, or erosion of coating. Obvious and significant deterioration.</td>
</tr>
</tbody>
</table>

c. Acceptance Level:

1). Individual test results for the specified 49 reagents shall be within the Range for that reagent as specified on the table below.

2). There shall be no more than four (4) Level 3 conditions.

d. Table of reagents:

### Section 3: Hot Water Test
a. Test Procedure: 190 to 205 degrees Fahrenheit (88°C to 96°C) hot water shall be allowed to trickle (with a steady stream and at a rate of not less than 6 ounces (177.5 cc) per minute) on the finished surface, which shall be set at an angle of 45 degrees Fahrenheit for a period of 5 minutes.

b. Acceptance Level: After cooling and wiping dry, the finish shall show no visible effect from the hot water.

### Section 4: Paint Adhesion on Steel Test
a. Test Procedure: Test shall be based on ASTM D2197-86 “Standard Method of Test for Adhesion of Organic Coating.” Two sets of eleven parallel lines 1/16 inch (1.587 mm) apart shall be cut with a razor blade to intersect at right angles thus forming a grid to 100 squares. The cuts shall be made just deep enough to go through the coating, but not into the substrate. Brush surface lightly with a soft brush for one minute. Examine under 100 fc (1076 lux) of illumination.

b. Acceptance Level: Ninety or more of the squares shall show finish intact.

### Section 5: Impact Test
a. Test Procedure: Drop a 1 pound (0.4536 kg) ball approximately 2 inches (50.8 mm) in diameter from a distance of 12 inches (305 mm), onto a flat horizontal surface, coated to manufacturer’s standard manufacturing method.

b. Acceptance Level: No visual evidence to the naked eye of cracks in the finish due to impact.

### Section 6: Paint Hardness on Steel Test
a. Test Procedure: Paint film shall be tested with pencils of various hardnesses. Pencils shall have a wide, sharp edge. Pencils shall be pushed across surface in a chisel-like manner.

b. Acceptance Level: Finish film shall not rupture from a sharpened 4H pencil.

2.15 STAINLESS STEEL FABRICATIONS

A. Applicability: This section applies to stainless steel fabrications, including, but not limited to, work surfaces, canopy hoods, drying racks, sinks, stainless steel pipe drop enclosures, and other miscellaneous brake-formed and shop fabricated stainless steel components and trim as shown on the drawings.

B. Manufacturers:

1. The Diamond Group, 895 Munch Street, Laval, Quebec H7S 1A9 Canada Tel: 450 668-0330.
2. Inter Dyne Systems, Inc., 676 Ellis Road, Norton Shores, MI 49441 Tel: 231 799-8760.
4. Approved substitution.

C. Materials and Finishes:

1. Unless otherwise noted stainless steel shall be Type 304 and shall be of gauge indicated on Laboratory Furnishing drawings or this specification.
2. All fabrications shall have exposed surfaces ground and polished to a No. 4 satin finish.
3. All stainless steel nuts, screws, bolts, and rivets, etc., shall be of the same type stainless as in the sheet material and shall have a tumbled finish closely resembling that of a No. 4 finish.
4. All stainless steel welding material shall be of type similar to the sheet material or a richer quality. All welds shall be made without discoloration and shall be ground, polished, and passivated to blend harmoniously with a No. 4 satin finish. All joints in stainless steel tops and work surfaces shall be welded.

D. Work Surfaces:

1. Thickness: 16 gauge (1.6 mm).
2. Fabrication:
   a. Edges: Flanged down the same dimension as the adjacent non-stainless top, with 1 inch (25 mm) being a minimum and returned over a perimeter metal frame to simplify securing top material to cabinet or structural frame.
   b. Reinforcement: Under-surface shall be reinforced with full length 16 gauge (1.6 mm) structural metal channels as required to insure rigidity and prevent buckling, warping, or oil canning. Where bench-mounted fittings are indicated on the drawings, provide top reinforcement to allow for rigid, secure mounting of fittings.
   c. Undercoating: Underside of top shall have a heavy mastic agent coating providing sound deadening.
   d. Stainless steel sides and backsplashes, where indicated, shall be integrally welded to top and finish as indicated above. The back side of exposed backsplashes shall be finished to match front and sides.
   e. Provide all holes and cutouts as required for built-in equipment and mechanical and electrical service fixtures. Verify size of opening with actual size of equipment to be used prior to making openings. Form inside corners to a radius of not less than 1/8 inch (3 mm). After sawing, rout and file cutouts to ensure smooth, crack-free edges with no burrs.
3. Tops with Sinks: Tops and sinks shall be integral, fabricated with a marine edge and shall be pitched to sink bowl for proper drainage. Marine edges shall be seamless die-formed.
4. Flat Stainless Steel Work Surfaces: (Without marine edge or sink) Shall have an integrally coved backsplash and bull-nose at front edge of work surface.
5. Wall-Supported Benchtop
   a. Benchtops shall be fabricated as per construction section of this specification with stainless steel wall support and bracket angles all as per Laboratory Furnishings Drawings.
   b. Unit shall be designed to support 200 pounds per square foot, completely wall supported with no legs or support members extending to the floor.
6. Joints: Fabricate work surfaces in the largest sections practical for delivery to the job site. All joints shall be field-welded, ground smooth, and polished on-site to create a continuous work surface.

E. Laboratory Sink: Integral one piece construction with stainless steel work surface.
   1. Thickness: 18 gauge (1.3 mm thick), unless otherwise noted.
   2. Construction: Sink units shall be designed and fabricated with sufficient reinforcement to prevent oil canning. All sink joints shall be butt-welded, ground smooth by the heliarc welding process. Inside radii shall be 1 inch (25 mm). Bottoms shall be pitched to the drain indent. No soldering will be permitted in connection with sink construction. Sink bowl dimensions given are inside dimensions. Underside shall have a heavy mastic agent coating providing sound deadening.

F. Canopy Hood: Provide stainless steel canopy with all hangers and miscellaneous hardware at locations and sizes as indicated on the Laboratory Furnishings drawings.
   1. Thickness: 18 gauge.
   2. Construction: Provide reinforcing necessary to prevent oil canning or deflection of panel between supports. All corners and joints shall be welded, ground smooth and free of all defects. Welded joints with visible burn marks will not be accepted.
   3. Accessories: Provide stainless steel hangers and miscellaneous support hardware as required for a complete installation.
   4. Provide exhaust duct transition piece for mechanical connection above the ceiling under Division 23. Refer to the Exhaust Schedule on the drawings for required exhaust flow rate and connection diameter.

2.16 SLOTTED CHANNEL FRAMING

A. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.
   1. Unistrut, 35660 Clinton Street, Wayne, MI 48184 Tel: 800 521-7730.
   3. Kumar Industries (Nu-Strut), 4881 Chino Ave., Chino, CA 91710 Tel: 909 591-0722.
   4. Cooper B-Line Inc. (B-Line), 509 West Monroe St., Highland, IL 62249 Tel: 618 654-2184.
   5. Approved substitution.

B. Materials: Channel and framing members shall be fabricated from steel conforming to the following requirements:
   1. Framing Members:

b. Exposed Framing Members and Fittings: ASTM A446 GR A with zinc coating conforming to ASTM A525.

c. Stainless Steel Framing Members and Fittings: ASTM A240 (Type 304), where indicated.

2. Fittings:

a. Concealed Fittings: Fabricate from steel satisfying the requirements of ASTM A570 GR 33, and conform to the following ASTM specifications: A575, A576, A36, or A635. Nuts shall conform to ASTM A576 GR 1015 and screws shall conform to SAE J429 GR 2 and ASTM A307.

b. Exposed Fittings: Fabricate from steel satisfying the requirements of ASTM A570 GR 33, and conform to the following ASTM specifications: A575, A576, A36, or A635. Nuts shall conform to ASTM A576 GR 1015 and screws shall conform to SAE J429 GR 2 and ASTM A307. Exposed fittings shall receive zinc coating conforming to ASTM A525.

c. Stainless Steel Fittings and Hardware: Sintered Nuts shall be of ASTM B783 (Type 316N2-33) stainless steel and fittings shall be of ASTM A240 (Type 304) stainless steel. Stainless steel fittings and hardware shall be used with stainless steel framing members, or where indicated.

3. Thickness: 12 gauge, unless noted otherwise.

4. Size: 1 5/8 inch x 1 5/8 inch cross-section, unless noted otherwise.

C. Components:

1. The following components shall be provided, unless otherwise noted:

b. Suspended Framing Channel, 3 ¼ inch x 1 5/8 inch x 12 gauge: Unistrut P5000, Powerstrut PS 100, Kumar Industries N-150, B-Line Systems, Inc. B11, or equal.

c. 90° Angle Fitting: 4 1/8 inch x 3½ inch x ¼ inch with two holes, each leg: Unistrut P1325, Powerstrut PS 607, Kumar Industries N-1123, B-Line Systems, Inc. B104, or equal.

d. 135° Angle Fitting: 3 inch x 2 5/16 inch x ¼ inch with one hole, each leg: Unistrut P1546, Powerstrut PS 633-45°, Kumar Industries N-1425, B-Line Systems, Inc. B154, or equal.

e. T-Shaped Flat Plate Fitting: 5 3/8 inch x 3½ inch x ¼ inch plate, T-shaped, with four holes: Unistrut P1031, Powerstrut PS 714, Kumar Industries N-1022, B-Line Systems, Inc. B133, or equal.

f. Wing Shape Fitting, 9 5/32 inch x 3 7/8 inch ten holes, two holes in each wing section and two holes in each of three channel section sides: Unistrut P2347, Powerstrut PS 913, B-Line Systems, Inc. B273.

i. Slotted Hole Framing Channel, 1 5/8 inch x 1 5/8 inch x 12 gauge framing channel with 13/32 inch x 3 inch slotted holes, 4 inches on center: Unistrut P1000 SL, Powerstrut P 200 S, Kumar Industries N-200-SL, B-Line Systems, Inc. B22S.
j. Slotted Framing Channel for installation in Chemical Fume Hoods, 1 5/8 inch x 13/16 inch x 16 gauge Type 316 stainless steel framing channel: Unistrut P4000 SS, Powerstrut PS 560 SS, Kumar Industries, B-Line Systems, Inc.

1). Attach channel to side of fume hood with 2 5/8 inch x 1 7/8 inch x 1/8 inch, 4 hole, stainless steel 90º fitting: Unistrut P6325 SS, Powerstrut, Kumar Industries, B-Line Systems, Inc.

m. End Caps: 0.06 inches thick for framing channel: Unistrut P1280, Powerstrut PS 707, Kumar Industries N-2500, B-Line Systems, Inc. B205, or equal. Provide end caps for all exposed horizontal framing channels.

n. Ceiling Escutcheon: Provide 18 gauge steel, finished to match framing members, as indicated on the Laboratory Furnishing drawings, at ceiling penetrations.

o. Other components, hardware, and fasteners, as required for a complete assembly and as indicated on the drawings.

2. Service Struts and Ledging:

a. 16 gauge, 13/16 inch x 1 5/8 inch cold-formed framing uprights: Unistrut P4000, Powerstrut PS 560, Kumar Industries N-400, B-Line Systems, Inc. B56, or equal. Uprights shall be provided at 48 inches, maximum, and fastened top and bottom by two adjustable U-shaped spreaders.

b. U-shaped spreaders: 12 gauge by 1 ½ inch (45 mm) wide by length required, galvanized steel.

c. Locations:

1). Provide to support tops at pipe service chase space, support drain troughs, under fume hood superstructures, and other abnormal loads.

2). Support struts with U-shaped spreaders shall be provided at 48 inches (1220 mm) on center below island and peninsula benches, as indicated on drawings. Support struts shall be provided along wall 48 inches (1220 mm) on center below island and peninsula benches. Struts will be used to support piped and electrical services installed under Divisions 22, 26, and 27. Provide all bolts, expansion sleeves, and fastening devices for a complete assembly. Pipe and conduit hangers shall be provided by Division 22, 26, and 27 installers.

3. Cylinder and Dewar Restraint:

a. Swivel Hanger: 1 ¾ inch long by 3/8 inch diameter link welded to threaded stud; provide two per cylinder: Unistrut M2350, Powerstrut PS205, Kumar N-2911, B-Line 446B.

4. Finish:

a. Provide finish coating for all cold-formed framing components, except for stainless steel components.

b. Concealed Framing Members and Fittings: Rust inhibiting acrylic enamel paint applied by electrostatic deposition, after cleaning and phosphating, and thoroughly baked. Finish shall withstand a minimum of 400 hours salt spray when tested in accordance with ASTM B117. Color: Green.

c. Exposed Framing Members and Fittings: Factory applied epoxy powder coat. Color: To be selected by the Architect.
2.17 SEALANT

A. Manufacturers: Products complying with this specification may be provided by the following manufacturers.
   1. Dow Corning Corporation, P.O. Box 994, Midland, MI 48686 Tel: 989 496-7881.
   3. C.R. Laurence Company, Inc., 600 Wharton Drive, Atlanta, GA 30336 Tel: 404 696-3445
   4. Approved substitution.

B. Basis of Design: Dow Corning 732 Multi-Purpose Sealant, GE Silicones RTV 100 Series, C.R. Laurence CRL 33S Silicone, or equal.

C. Characteristics:
   1. Type: One-part silicone rubber, MIL-A-46106.
   3. Cure: Cures at room temperature on exposure to water vapor in the air.
   4. Authorizations:
      a. FDA Regulation No. 21 CFR 177.2600.
      b. USDA Rating P1.
      c. NSF Rating C2.
      d. UL 150 C Rating, File No. E40195 (N).
   5. Properties:
      a. Tack Free Time, ASTM C-679: 45 minutes, maximum.
      c. Tensile Strength, ASTM D-412: 220 pounds per square inch, minimum.
      e. UV Resistance, ASTM C-793: Excellent.

PART 3 - EXECUTION

3.1 SITE CONDITIONS

A. Inspection:
   1. Prior to installation of the work of this Section, carefully inspect the installed work specified in other Sections and verify that all such work is complete to the point where this installation may properly commence.
   2. Verify that all work may be installed in complete accordance with the original design, reviewed submittals, and the manufacturer’s recommendations.
   3. Where floor conditions require shimming or leveling of more than ¾ inch at any point, do not install casework in those locations. Notify the contractor and design team that remedial measures will be required to bring the floors closer to a level situation.

B. Discrepancy: In the event of discrepancy, immediately notify the Architect.

3.2 INSTALLATION

A. Coordinate work with any Owner furnished and/or installed components indicated on drawings.
B. General: Assemble units into one integral unit with joints flush, tight, and uniform. Align similar adjoining units to a tolerance of 1/16 inch (1.5 mm).

C. Cabinets:
1. Install cabinets to create a plumb, level, true and straight installation.
2. Installation of metal casework fixed cabinets shall utilize the internal leveling devices. Do not use shims.
3. Installation of wood casework shall be performed using shims. Shimming shall be minimized as much as possible, yet be sufficient to achieve a level and plumb condition.
4. Installation shall maintain the required height of countertops, but in all cases must stay within the range required by the ADA regulations.
5. Securely fasten wall units to solid supporting material, not plaster, lath, or wallboard. Anchor, adjust, and align wall cabinets as specified for base cabinets. Verify that all required backing and reinforcement necessary to support wall-mounted units is in place, secure, and accurately located.

D. Installation materials:
1. Installation of wood may involve the use of shims, spacers, cleats, straps and other such items of either metal or wood composition.
2. Installation of metal casework shall use spacers, cleats, and straps of galvanized steel, epoxy-coated steel, or stainless steel. No wood materials of any sort shall be part of the permanent installation of metal casework.
3. Installation of stainless steel counters shall use spacers, cleats, and straps of stainless steel of the stainless steel type specified for the casework construction. No wood or carbon steel materials of any sort shall be part of the permanent installation of stainless steel casework.

E. Laboratory Tops:
1. Scribe tops as necessary for close and accurate fit. Joints between worksurfaces, backsplashes, and adjacent items, penetrations, or similar shall be hairline joints, with a maximum width of 1/16 inch.
2. Field Joints: Factory-prepared and identical to factory joints, locate only where indicated on approved Shop Drawings. Field processing of top and edge surfaces is not acceptable, except as described by manufacturer in approved Submittal Data. Provide full length, one-piece tops and backsplashes wherever possible, and keep field joints to an absolute minimum.
3. Abut top and edge surface in one true plane, with internal supports placed to prevent any deflection. Joints in top units shall be flush and the narrowest for the respective materials of construction. Cement top joints and laboratory sinks in accordance with the manufacturers’ specifications.
4. All joints in stainless steel work surfaces shall be field-welded, ground smooth, and polished on site to create a continuous work surface.

F. Sealant:
1. Caulk edges of tops, backsplashes and side splashes to adjacent wall surface with silicone sealant.

3.3 DESTRUCTIVE TESTING

A. The Owner, Architect, and/or Contractor may, at their own cost, elect to perform destructive testing on casework cabinet components (such as fronts, sides, etc.) to confirm compliance with the requirements of this specification. The casework manufacturer/installer should account for
the de-installation, repair, and reinstallation, or replacement of one cabinet that may be selected for destructive testing.

3.4 CLEANING AND PROTECTION

A. Repair or remove and replace defective work as approved by the Architect at no additional cost to the Owner.

B. Clean finished units, touch up as required, and remove and refinish damaged or soiled areas.

C. Cover tops with kraft paper or polyethylene sheeting and all other means necessary after installation for protection against scratching, soiling, and deterioration during remainder of construction period. Remove protection prior to final cleaning.

D. Clean counter tops with diluted dishwashing liquid and water leaving tops free of all grease and streaks. Use no wax or oils.

END OF SECTION
SECTION 115313 - FUME HOODS AND OTHER AIR CONTAINMENT UNITS

PART 1 - GENERAL

1.1 SECTION INCLUDES
   A. Chemical Fume Hoods, including bench mounted hoods
   B. Fume Extractor Arms (Snorkels)
   C. Fume Extractor Arms (Snorkels): High Temperature
   D. Canopy Hoods

1.2 RELATED SECTIONS
   A. Section 115310: Laboratory Casework and Other Furnishings
   B. Section 115343: Laboratory Service Fittings and Fixtures
   C. Division 22: Plumbing
   D. Division 23: Heating, Ventilating, and Air Conditioning (HVAC)
   E. Division 26: Electrical

1.3 REFERENCES
   A. Chemical fume hoods:
      2. Conform to the recommended practices for laboratory fume hoods published by the
         Scientific Equipment and Furniture Association: SEFA 1 Recommended Practices for
         Fume Hoods.

1.4 DESCRIPTION
   A. Provide equipment complete with accessories as described herein and shown on Laboratory
      Furnishings drawings.
   B. Chemical fume hoods:
      1. Fume hoods with accessories shall be pre-piped and pre-wired. Pre-pipe service fittings
         to single point connection at 6 inches (150 mm) above top of hood or as otherwise
         shown.
         a. Refer to Section 115343 and details on Laboratory Furnishings drawings for
            service fittings.
         b. P-trap, waste piping and tailpiece extensions for cupsinks shall be furnished and
            installed by Division 22. Comply with Division 22 requirements for piping and
            installation requirements for respective pre-piped services.
c. Pre-wire all electrical devices to junction box at top of hood. Comply with Division 26 requirements for electrical work.

1.5 SUBMITTALS

A. Refer to the General Conditions and Division 1 “Submittal Procedures” for submittal requirements. In addition to these requirements, provide submittal requirements specified herein.

B. Submittal requirements:
   1. Submittal shall be prepared individually for this specification section. Arrange product data, drawings and information for submission in a complete set for this specification section.
   2. Submittal shall contain complete data for all items of this specification section. Periodic or partial submittals of individual components within this specification section will be returned as incomplete and rejected.
   3. Submittals shall be organized by specification sequence with section and paragraph number identified.
   4. Equipment and components being proposed shall be clearly labeled with all options and accessories indicated and shall be for this specific project. All non-applicable options, items and components shall be deleted or struck.

C. Materials List/Product Data: Submit complete materials list, including catalog data of all materials, equipment, and products for Work specified in this Section. Include chemical resistance finish performance test results for any products specified in this section.

D. Shop Drawings: Submit complete shop fabrication and installation drawings, including plans, elevations, sections, details and schedules. Show relationship to adjoining materials and construction. Shop Drawings shall be in the form of reproducibles or photocopies, not to exceed 11 inches by 17 inches (A3) in size. Blueline prints are not acceptable.

E. Approved Substitution/Approved Equal: In addition to the items required in Division 1, all substitution requests shall include item-by-item comparison of the proposed substitution to this project specification. A copy of the project specification shall be submitted, with each item and subsection of the project specification marked as “Comply” or “Not Comply.” In any cases where “Not Comply” is indicated, an explanation of the relative advantages of the proposed design shall be provided.
   1. Substitution shall not affect dimensions shown on Drawings.
   2. The Contractor shall pay for changes to the building design, including engineering design, detailing, utility and service requirements, and construction costs caused by the requested substitution.
   3. Substitutions shall have no adverse effect on other trades, the construction schedule, or specified warranty requirements.
   4. Maintenance and service parts shall be locally available for the proposed substitution.

F. Samples: Submit two (2) samples of each type of specified finish and color range available.

G. Test Reports: Submit the following performance test reports.
   1. “As Manufactured” (AM) Fume Hood Testing in Manufacturing Facility: Provide certification that each type and size of fume hood has passed Flow Visualization and Face Velocity tests, and achieved an AM performance rating equal or better than 0.05
ppm with 4.0 Lpm tracer gas release rate when tested in accordance with ASHRAE 110-2016.

2. **Fume Hood Sound Level Certification:** Provide certification of fume hood compliance with design criteria for maximum allowable noise within laboratories.
   
a. At project design operating conditions for sash height and face velocity, test data of octave band analysis verifying hood is capable of a 50 NC or lower value when connected to a 50 NC (minimum) HVAC source. Measurements shall be taken 36 inches (915 mm) in front of open sash.

3. **Fume Hood Certification:** Submit “As Installed” (AI) test report as described elsewhere in this section.

**H. Operations/Maintenance Manuals:** At project close-out, submit for Architect's review and Owner's use, complete operating and maintenance manuals that describe proper operating procedures, maintenance and replacement schedules, component parts list, and closest factory representative for components and service.

### 1.6 QUALIFICATIONS

**A.** Work in this Section shall be performed by a firm having a minimum eight years documented experience, and an established organization and production facilities including all tools, equipment and special machinery necessary for specializing in the fabrication and installation of the type of equipment required with skilled personnel, factory trained workmen and an experienced engineering department. Each shall have the demonstrated knowledge, ability and the proven capability to produce the specified equipment of the required quality and the proven capacity to complete an installation of this size and type within the required time limits.

### 1.7 COORDINATION

**A.** Work of this Section requires close coordination with Work of Divisions 22, 23 and 26 as well as Work specified in other Sections. Sequence all Work to ensure an orderly progress in the project without removal of previously installed Work and so as to prevent damage to finishes and products.

**B.** Coordinate, furnish, and install chemical fume hoods designed for variable air volume (VAV) or constant air volume (CAV) operation as indicated in the mechanical drawings. The designed exhaust airflow control method (VAV or CAV) shall be confirmed and coordinated prior to submission and shall be clearly indicated in the submittal product documentation.

### 1.8 WARRANTY

**A.** Refer to the General Conditions and Division 1 “Product Requirements” for warranty requirements. In addition to these requirements, all products shall be warranted to be free from defects in materials and workmanship for a minimum period of one year following substantial completion. The manufacturer/ dealer/ subcontractor shall repair or replace any products (or parts thereof) that are found to be defective. Replacement will include any parts, labor, shipping, and travel expenses involved. Warranty replacement work must be scheduled in coordination with the Owner’s academic/research schedule, and may therefore require evening and/or weekend work.
PART 2 - PRODUCTS

2.1 ACCESSIBILITY FOR PERSONS WITH DISABILITIES

A. Where indicated on Laboratory Furnishings drawings, fume hoods shall be furnished and installed in a manner to make them accessible to persons with disabilities in accordance with the Americans with Disabilities Act and any state or local building code or regulation having jurisdiction. The height of the highest point of access to the work surface above finished floor shall not exceed 34 inches. Fittings for piped services and electrical receptacles and controls shall be of a design and in a location in order to be considered accessible.

2.2 CHEMICAL FUME HOODS

A. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be provided by a single manufacturer.

1. Air Master Systems Corporation, 6480 Norton Center Drive, Muskegon, MI 49441 Tel: 231 798-1111.
2. Bedcolab Ltd, 2305 Francis Hughes Avenue, Laval, Quebec, Canada H7S 1H5 Tel 514 384-2820.
3. CiF Lab Solutions L.P., 53 Courtland Avenue, Vaughan, ON Canada L4K 3T2 Tel: 905 738-5821.
4. ICI scientific, 1865 Highway 641 North, Paris, TN 38242-8814 Tel: 731-642-4251.
5. Kewaunee Scientific Corporation, P O Box 1842, Statesville, NC 28687 Tel: 704 873-7202.
6. Labconco Corporation, 8811 Prospect Avenue, Kansas City, MO 64132 Tel: 800 821-5525.
7. Mott Manufacturing Limited, 452 Hardy Road, P. O. Box 1120, Brantford, ON, Canada N3T 5T3 Tel: 519 752-7825.
8. Approved substitution.

B. Underwriters Laboratory Listing: Fume hoods shall be UL subject 1805 classified. Label shall be attached to the face of each fume hood indicating classification to the UL 1805 standard for Laboratory Fume Hoods.

C. Materials: The following materials shall be provided, unless superseded by the requirements listed below for specific fume hood types.

1. Steel:
   a. ASTM A366 mild steel, furniture stock, cold-rolled, pickled, double annealed, and free from rust, scale, scratches, buckles, ragged edges, and other defects.
   b. Minimum Thickness: 18 gauge (1.2 mm).

2. Stainless Steel:
   a. Type 316, ASTM 240, with exposed surfaces ground and polished to a No. 4 finish.
   b. Minimum Thickness: 16 gauge (1.6 mm).
   c. Welding: All stainless steel welding material shall be of similar type to sheet material. Welds shall be made without discoloration, ground, polished, and passivated to blend with a No. 4 finish.

3. Liner and Baffle:
a. Typical: Glass-reinforced polyester panel, flame-retardant and self-extinguishing with smooth finish and white color. Flexural strength: 14,000 psi. Flame spread index of 0-25 when tested per UL 723 and ASTM E 84. Baffle shall be same material as liner. Liner thickness: 3/16 inch (4.76 mm); baffle thickness: ¼ inch (6.35 mm), minimum. Liner performance characteristics shall be as specified below.

4. Glass: 7/32 inch (5.56 mm) laminated safety glass. Glass shall not be etched with manufacturer’s name, logo, or any other permanent markings, other than to identify the glass as safety glass. Light fixture lens may be tempered safety glass.

5. Sash guides: Extruded PVC.

   a. Pulley assembly for sash chain: Finish bored steel drive sprockets and keyed drive, 1/2-inch (12.7 mm) diameter front connector shaft. Rear idler sprockets; double sealed ball bearings type, lubricated. All sprockets steel with zinc dichromate finish.

7. Sash belt: Two 1/2 inch wide stainless steel-reinforced polyurethane notched belts. Minimum tension cord strength of 840 N.
   a. Pulley assembly for sash belt: Cast aluminum sprocket mated to a steel shaft.

8. Sash pull: Steel with chemical resistant powder coating.
   a. Length: Full width of sash.

9. Gaskets: Provide PVC gasket at interior access panels to eliminate air leakage and retain liquids inside hood.

10. Fasteners:
   a. Exterior structural member attachments: Sheet metal screws, zinc plated.
   b. Interior fastening devices shall be concealed; exposed screws are not acceptable. Screw head caps are not acceptable.
   c. Exposed exterior fastening devices shall be corrosion-resistant, non-metallic material; exposed screws are not acceptable.

D. Construction:

1. Design: Fume hoods shall be designed for consistent and safe air flow through the hood face opening. Variations of face velocity shall not exceed ±20% of the average face velocity at any designated measuring point.
   a. Refer to the Laboratory Equipment Exhaust Schedule on the Laboratory Furnishings drawings for the design face velocity requirements for each type of fume hood.

2. Superstructure: Rigid, self-supporting assembly of double wall construction, maximum 4 7/8 inch (124 mm) thick. Wall shall consist of a sheet steel outer shell and a corrosion resistant inner liner, and shall house and conceal steel framing members, attaching brackets and remote operating service fixture mechanisms and services. Panels shall be attached to a full frame construction, minimum 14 gauge (2.0 mm) galvanized members. Panels and brackets attached to eliminate screw heads and metallic bracketry from hood interior.

3. Access Panel: Access to fixture valves and piping concealed in wall shall be through flush access panels on the inside liner walls, or through removable front posts. Panels shall be secured with PVC extruded gasket, or tamperproof, epoxy-coated, countersunk flat head screws providing a tight fit. Hook and loop type attachments and panels held by gravity are not acceptable.
4. Downdraft bypass: Low resistant type, 18 gauge (1.27 mm) steel chamber; directional louvers are not acceptable. All bypass air shall enter top of bypass chamber and enter hood in a downflow direction. Chamber shall protect user from expelled particulate in the event of an adverse internal reaction.

5. Baffles: Baffles shall be fixed and non-adjustable.

6. Ceiling Closure Panels: Panel shall include simple-to-operate means of access to the hood lighting fixture without the use of tools. Finish shall match superstructure exterior. Closure panel shall conceal view of the sash when the sash is in the open position. Provide sash pocket if required to allow correct operation of the bypass.
   a. Provide 18 gauge steel paneled enclosure from top of hood to 2 inches above the ceiling.

7. Trim and Side Panels: Provide matching steel trim and side panels, as required, to finish any openings around and between hoods. Panels shall be flush with other hood panels, and finish shall match superstructure exterior. At locations where fume hoods are back-to-back, provide one of the following:

8. Finished Back: Provide for any fume hood where back of hood is exposed to view. 18 gauge steel sheet. Finish shall match superstructure exterior.

9. Bypass Grille: Low-resistant type 18 gauge steel with upward directional louvers.

10. Exhaust Duct Collar:
   a. Construction: Provide Type 316L stainless steel, minimum 18-gauge, duct collar with 1 ½ inch (38 mm) to 2 inch (50 mm) extension above top of fume hood with butt joint termination suitable for welding. Duct collar design shall be bell-mouthed for round or contoured design for rectangular to provide lower static pressure drop and improved noise performance. Duct collar shall be integral to fume hood construction, factory-installed, and welded or permanently sealed airtight to hood.
   b. Configuration: For collar size and quantity, refer to Laboratory Equipment Exhaust Schedule on the Laboratory Furnishing drawings.

11. Exhaust Duct Transition Piece: Furnished by the fume hood manufacturer for installation by the mechanical contractor. Provide contoured Type 316L stainless steel, minimum 18 gauge, exhaust duct transition piece to connect to the fume hood exhaust duct collar and Laboratory exhaust duct system as shown on the Mechanical Drawings. Provide butt joint terminations suitable for welding. Note: Transition Piece is not required where hood exhaust duct collar has been provided per the Laboratory Equipment Exhaust Schedule.

12. Cup Sink:

13. Piping shall be as specified in Division 22 for respective system.

14. Service Fittings: As shown on Laboratory Furnishings Drawings and specified in Section 115343, factory-installed and complete with all gaskets, grommets and sleeves. No additional holes in fume hood side posts shall be provided for services beyond those required by the construction documents.

15. Alarm: Coordinate cut out for fume hood alarm to be provided under Division 23. All cut outs for alarm shall be made in the factory; field cutting is not acceptable.
   a. Locate at 48 inches or below for all Accessible designated fume hoods.

16. Electrical:
   a. Pre-Wiring: All fume hood electrical devices shall be factory-installed and wired to a junction box located on top of the hood. Comply with Division 26 requirements for electrical work.
      1). Fume hood receptacles shall be wired such that no more than two duplex outlets and the hood lighting are wired through a single circuit.
   b. Receptacles: Flush mounted, 125V / 20A / 60Hz duplex type, single gang, NEMA 5-20R, 3-wire, grounding type receptacle, one or two per side, or as indicated on
the Laboratory Furnishings Drawings, with brushed stainless steel cover plate. Each side of the fume hood shall have a GFCI receptacle with feed-through protection of any downstream receptacles.

17. Interior Hood Lighting:
   a. Lighting within the hood shall be provided by a UL approved, vapor-proof, LED light fixture operated by an exterior switch with a stainless steel cover plate. LED light color shall be 3,000K to 3,500K. Light fixture shall be approved for recessed and enclosed spaces, and third-party tested to 50,000 hours.
   b. Provide 1/4 inch thick safety glass panel cemented and sealed to the hood roof.
   c. Light level: Average light level on the work surface shall be 80 foot-candles, minimum.

18. Safety label: Provide self-adhesive polyester label, as described on the Laboratory Furnishings drawings. Labels shall indicate safe operating conditions with respect to fume hood sash position. Labels solely indicating 100 fpm face velocity sash position are not acceptable.
   a. Manufacturer: Lab Safety Supply Inc., P.O. Box 1368, Janesville, WI 53547 Tel: 800 356-0783, Model No. 156.
   b. Approved custom label meeting all requirements.
   c. Approved substitution.

19. Hood Finish: As specified elsewhere in this Section.

20. Exterior Color: As selected by Architect from manufacturer's full color line and complying with finish requirements.

E. Bench Mounted Chemical Fume Hoods:

1. Style: General purpose.
   a. Subject to compliance with the requirements listed below, acceptable models include:
      2). Vanguard Fume Hood by BedcoLab Ltd.
      3). APEX-Air GP Series by CiF Lab Solutions L.P.
      4). Isolator Bench Fume Hood by ICIscientific Metal Products, Inc.
      6). Protector XL Benchtop Laboratory Hood by Labconco Corporation.

2. Exterior depth: 34 1/2 inches, maximum.

3. Interior depth: 23 1/2 inches clear at 1 inch above the work surface, minimum.

4. Design:
   a. Restricted bypass fume hoods for variable air volume or constant volume exhaust systems with airfoil. Bypass shall be sufficient in size to allow 25% flow with sash closed. Bypass must be achieved through low resistance opening at top of front lintel panel. Bypass shall be designed to provide a smooth down flow effect.
   b. Fume hoods shall be designed to operate safely at face velocities of 100 feet per minute (0.51 m/s) to 125 feet per minute (0.64 m/s).

5. Work Surface: 1 ¼ inch (32 mm) dished epoxy resin, in compliance with Section 115310 requirements.
   a. Color:
      1). Base Bid: Black
2). Add Alternate Bid: Graphite as manufactured by Durcon Laboratory Tops, Inc., or approved substitution.

6. Airfoil: The airfoil shall allow ample room for electrical hospital grade cords to fit beneath the airfoil. Sill must pivot forward to provide cord and trough access. Bottom horizontal foil shall provide nominal 1 inch (25.4 mm) bypass when sash is in the closed position. Bottom foil shall not be removable without use of special tools. Airfoil shall be steel with urethane or epoxy powder coating.
   a. Sill shall be rounded or chamfered on front edge with all right angle corners radiused or angled. The airfoil and sill shall be flush with the height of the work surface; airfoil sills that are not flush with the top plane of the work surface dish are not acceptable.

7. Fume hood sash (Vertical): Full-view, frameless type with clear, unobstructed, side-to-side view of fume hood interior and service fixture connections. Sash to have a 35 inch (890 mm), nominal, sight line.
   a. Sash Opening: Refer to the Laboratory Equipment Exhaust Schedule on the Laboratory Furnishings drawings for vertical access height clearance.
   b. Counter balance system: Single weight, counter balance system to prevent sash tilting and permit ease of operation at any point along full width pull. Maximum 7 pounds (3 kg) pull required to raise or lower sash throughout its full length of operating sash opening. Design system to hold sash at any position without creep and to prevent sash drop in the event of suspension system failure.
   c. Sash Opening: Refer to the Exhaust Equipment Schedule on the Laboratory Furnishings drawings for vertical access height clearance.
   d. Sash Stop: Design to stop the sash at the Design Operating Condition as shown on the Exhaust Equipment Schedule, with manual override.

1). Provide one of the following types of sash stops for all fume hoods:
   a). Corrosion-resistant, spring-loaded lever handle integrated with sash track and fume hood side post.
   b). Stainless steel spring-loaded barrel-bolt integrated with sash pull and provided with angled stainless steel strike plate.

8. Baffle screen: Provide a perforated stainless steel screen or mesh designed to block debris and light materials from going up behind the baffle and into the exhaust ductwork.

F. Finish Requirements

1. Preparation:
   a. After the units have been completely welded together and before finishing, they shall be given a pre-paint treatment to provide excellent adhesion of the finish to the metal and to aid in the prevention of corrosion. Physical and chemical cleaning of the metal shall be accomplished by washing with an alkaline cleaner, followed by a spray treatment with a heated cleaner/phosphate solution and pretreated with iron phosphate spray followed by a neutral final seal prior to application of final finish. The strength of each solution shall be monitored by filtration to insure consistent quality.
   b. All treated parts shall be immediately dried in heated ovens and gradually cooled before application of the finish. Treated metal parts shall be clean and properly prepared to provide optimum adhesion of finish and resistance to corrosion.

2. Application: Electrostatically apply powder coat of selected color and bake in controlled high temperature oven to assure a smooth, hard satin finish. Surfaces shall have a chemical resistant, high grade laboratory furniture quality finish of the following thicknesses:
a. All surfaces, exterior or interior, exposed to view, shall receive sufficient powder coat to achieve an average 1.5 mil (38 µm) film thickness with a minimum 1.2 mil (30 µm) film thickness and shall have smooth satin luster.
b. Backs of cabinets and other surfaces not exposed to view shall have sufficient powder coat to achieve an average 1.0 mil (25 µm) film thickness.
c. Concealed interior parts shall receive corrosion-resistant treatment.
d. Stainless steel parts and surfaces shall not be powder coated.

3. Chemical Resistance Finish Performance Requirements:
   a. Test Procedure: Apply 10 drops (approximately 0.5 cubic centimeters) of each reagent identified to the surface of the finished test panels laid flat and level on a horizontal surface. Ambient temperature: 68°F to 72°F (20°C to 22°C). After one hour flush away chemicals with cold water and wash surface with detergent and warm water at 150°F (65.5°C) and with alcohol to remove surface stains. Examine surface under 100 foot-candles (1076 lux) of illumination.
   b. Evaluation Ratings: Change in surface finish and function shall be described by the following ratings:

<table>
<thead>
<tr>
<th>Rating</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No effect No detectable change in the material surface.</td>
</tr>
<tr>
<td>1</td>
<td>Excellent Slight detectable change in color or gloss but no change in function or life of the surface.</td>
</tr>
<tr>
<td>2</td>
<td>Good A clearly discernable change in color or gloss but no significant impairment of surface life or function.</td>
</tr>
<tr>
<td>3</td>
<td>Fair Objectionable change in appearance due to discoloration or etch, possibly resulting in deterioration of function over an extended period of time.</td>
</tr>
<tr>
<td>4</td>
<td>Failure Pitting, cratering, or erosion of the surface. Damage to film and loss of adhesion and film protection. Obvious and significant deterioration.</td>
</tr>
</tbody>
</table>

4. Performance requirements: Test results for powder coat finish shall equal or exceed the following:

</table>

Note: Maximum concentration is to be understood unless a lower concentration is shown in the table.

a. Physical Tests:

1. Abrasion: Finish shall have high abrasion resistance with maximum weight loss of 5.5 mg per 100 cycles as tested on a Taber Abrasion Tester No. E40101 with 1000 gm wheel pressure and Calibrase No. CS10 wheel.

2. Hardness: Finish shall have surface hardness equivalent to 4H or 5H pencil lead.

3. Humidity: Finish shall withstand 1000 hours exposure in saturated atmosphere at 100°F (38°C).

4. Moisture: Finish shall withstand the following procedures with no visible effect:
   a) Boiling water flowing over 45 degree inclined surface for 5 minutes.
   b) 100 hours continuous contact with water-soaked cellulose sponge, maintained in a wet condition throughout test.

5. Adhesion: Finish shall withstand the following test procedure with at least 95 squares maintaining their finish. Using a razor blade, score the finish surface of the test panel through to the substrate with a pattern of 100 squares, each 1/16 inch x 1/16 inch. Brush away loose particles with a soft brush.

G. Fume Hood Liner Test: Polyresin

1. Test No. 1: Spills and Splashes:
a. Suspend a 42 inches (1067 mm) x 12 inches (305 mm) panel (42 inch (1067 mm) dimension horizontal) in a position to expose the surface to be tested in a vertical plane. Divide the panel vertically into 3/4 inch (19 mm) spaces.

b. Using an eyedropper, apply five drops of each reagent as listed.

c. Liquid reagents shall be applied at the top of the panel and permitted to flow down full panel height. (CAUTION! Flush away any reagent drops.)

2. Test No. 2: Fumes and Gases:

a. Prepare a panel 24 inches (610 mm) x 12 inches (305 mm) by dividing panel into 2 inch (51 mm) squares. Using 100 ml beakers, place 25 ml (approximately 1/2 inch (13 mm) of reagent) into each beaker. Place beakers in position so that test panel may be placed over beaker tops in the proper sequence. Place panel over beakers. Note: Beaker pouring lip permits atmospheric oxygen to enter and participate in the reaction of the reagent fumes.

b. After a 24 hour time period has elapsed, remove panel, flush off with water, clean with naphtha and detergent, rinse and wipe dry. Evaluate.

3. Evaluating Ratings:

2.3 FUME EXTRACTOR ARMS (SNORKELS)

A. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be provided by a single manufacturer.

1. Alsident System represented by Laboratory Enterprises, 3122 Brinkerhoff Road, Kansas City, KS 66115 Tel: 913 621-7337.
4. Approved substitution.

B. Models: Subject to compliance with the requirements listed below, acceptable models include:

1. System 75 by Alsident System.
2. MET by Movex.
3. FX Extractor Arms by Nederman Inc.

C. Type: Ceiling mounted, self-supporting fume extractor arm.

D. Characteristics:

1. Extractor Arm Diameter:
   a. 3 inch diameter tubes.

2. Extractor Arm Material:
a. Anodized aluminum.

3. Arm Length: Arms shall be of sufficient length to cover an 18 inch radius area at 48 inches above the finished floor.
   a. Assembly shall be positioned so that no component is lower than 90 inches above the finished floor.

4. Swivel Assembly: Hi-grade cast aluminum with 360 degree rotation.
   a. Provide external, corrosion-resistant adjustment knobs.
   b. Gas Spring: Provide gas spring to support upper friction joint to provide stable positioning of articulated snorkel arm.

7. Ceiling mounted stanchion/bracket for attachment to structure above.
8. Escutcheon suitable to trim any ceiling penetrations.
9. Final connection to the fume exhaust duct system under Division 23. Provide airflow per Equipment Exhaust Schedule.
10. Dampers are not acceptable and shall not be provided.

2.4 FUME EXTRACTOR ARMS (SNORKELS): HIGH TEMPERATURE

A. Manufacturers: Products complying with this specification may be provided by the following manufacturers. All products specified in this section shall be provided by a single manufacturer.
   2. Approved substitution.

B. Basis of design: Movex, Mex-AA. 4 inch (100 mm) diameter, stainless steel, telescopic air extractor assembly for atomic absorption equipment, or equivalent.
   1. Telescopic assembly:
      b. Dimensions: 42 inch long extractor assembly, with a 17 inch telescopic extension.
   2. Wall mounting bracket: Powder coated steel support with 180 degree swing motion. Arm length shall be provided with a 10 inch adjustment from 14 inches to 24 inches from the wall.
   4. Hood: 10 inch diameter, 316L stainless steel.
   5. Flexible Hose: Provide a 60 inch long, 5 inch diameter hose for connection to the building exhaust system. Provide two draw-band clamps. Modify hose length as required for the ceiling height.
      1) Heat resistance: Capable of withstanding up to 570 degrees F.
   6. Final connection to the fume exhaust duct system under Division 23. Provide airflow per Equipment Exhaust Schedule.
2.5 CANOPY HOODS

A. Custom fabricated stainless steel canopy hoods: Refer to Section 115310, Stainless Steel Fabrications.

PART 3 - EXECUTION

3.1 SITE CONDITIONS

A. Prior to installation of the Work of this Section, carefully inspect the installed Work specified in other sections and verify that all such Work is complete to the point where this installation may properly commence.

B. Verify that all Work has been installed in complete accordance with the original design, received submittals, and the manufacturer's recommendations.

C. In the event of discrepancy, immediately notify the Architect. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.

3.2 INSTALLATION

A. Work in this Section requires close coordination with Work specified in Division 22, Division 23 and Division 26, as well as installation by Owner of Owner furnished components. Coordinate all Work to ensure an orderly process in the Project, without removal of previously installed Work, and so as to prevent damage to finishes and products.

B. Coordinate location and alignment of fume hoods and cabinets for proper connection of all piping and duct work.

C. Install all equipment in accordance with applicable codes and regulations, accepted Shop Drawings, and as necessary for a complete operating system.

3.3 FIELD TESTING

A. Chemical Fume Hoods:
   1. Fume hood field tests shall be performed by a qualified independent testing company on each hood.
   2. All laboratory supply, general exhaust, and fume exhaust HVAC systems shall be operational during testing.
   3. Test and certify each fume hood in accordance with ASHRAE Standard 110-2016 for Section 6.1 Flow Visualization, Section 6.2 Face Velocity Measurements, Section 6.3 Test Method for VAV Fume Hoods, Section 6.4 VAV Response Test, and Section 7 Tracer Gas Test Procedure testing requirements.
   4. Flow Visualization: Fume hood shall provide complete containment of the smoke generated within the hood.
   5. Face Velocity Measurements: Fume hoods shall be tested at the design operating condition sash opening height indicated in the Chemical Fume Hood Schedule.
      a. Fume hoods shall achieve the scheduled design operating condition average face velocity within ±5 fpm.
b. Individual face velocity readings shall not vary by more than 20% of the mean between measurement grid locations.

6. Test Method for VAV Fume Hoods (Not Applicable to CAV Hoods): Perform this test to confirm VAV controls are properly calibrated. Average and individual face velocity reading should meet the performance criteria indicated for Section 6.2 Face Velocity Measurements above.

7. VAV Response Test (Not Applicable to CAV Hoods): Perform this test to verify VAV controls are responding accurately to the opening of the fume hood sash. The time it takes from the start of the sash movement until the face velocity stabilizes shall be less than 5 seconds.

8. Tracer Gas Test Procedure: Fume hoods shall achieve an As-Installed (AI) performance rating equal or better than 0.10 ppm with 4.0 Lpm tracer gas release rate.

9. Cross Drafts: Fume hood testing shall also include measuring and documenting the vertical and horizontal cross-drafts at the face of the hood. Cross-drafts shall not exceed half of the fume hood face velocity.

10. Balancing of the HVAC systems is in the scope of work of Division 23.

3.4 CLEANING AND PROTECTION

A. Repair or remove and replace defective work as approved by the Architect upon completion of installation.

B. Adjust all moving or operating part to function within their design parameters.

C. Clean equipment, touch up as required.

D. Protect all units before, during, and after installation. Damaged materials due to improper protection shall be cause for rejection.

END OF SECTION
SECTION 115343 - LABORATORY SERVICE FITTINGS AND FIXTURES

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Laboratory service fittings, valves, and related components.

B. Laboratory emergency plumbing fixtures.

C. Laboratory sink units.

1.2 RELATED SECTIONS

A. Division 22: Plumbing

B. Section 222000: Laboratory Plumbing

C. Division 23: Heating, Ventilated, and Air Conditioning (HVAC)

D. Division 26: Electrical

1.3 REFERENCES

1.4 DESCRIPTION

A. Work includes but is not necessarily limited to furnishing to the project site for installation by Division 22, all laboratory fixtures, fittings, and emergency plumbing fixtures described herein and shown on the Laboratory Furnishings Drawings.

1.5 SUBMITTALS

A. Refer to General Conditions and Division 1 “Submittal Procedures” for submittal requirements. In addition to these requirements, provide submittal requirements specified herein.

B. Submittal requirements:

1. Submittal shall be prepared individually for this specification section. Arrange product data, drawings and information for submission in a complete set for this specification section.

2. Submittal shall contain complete data for all items of this specification section. Periodic or partial submittals of individual components within this specification section will be returned as incomplete and rejected.

3. Submittals shall be organized by specification sequence with section and paragraph number identified.
4. Equipment and components being proposed shall be clearly labeled with all options and accessories indicated and shall be for this specific project.

C. Materials List/Product Data: Submit complete materials list, including catalogue data, of all materials, equipment, and products for Work in this Section.

D. Shop Drawings: Submit complete shop fabrication and installation drawings, including plans, elevations, sections, details and schedules. Show relationship to adjoining materials and construction. Shop Drawings shall be in the form of reproducibles or photocopies, not to exceed 11 inches by 17 inches (A3) in size. Blueline prints are not acceptable.

E. Approved Substitution/Approved Equal: In addition to the items required in Division 1, all substitution requests shall include item-by-item comparison of the proposed substitution to this project specification. A copy of the project specification shall be submitted, with each item and subsection of the project specification marked as “Comply” or “Not Comply.” In any cases where “Not Comply” is indicated, an explanation of the relative advantages of the proposed design shall be provided.

1. Substitution shall not affect dimensions shown on Drawings.
2. The Contractor shall pay for changes to the building design, including engineering design, detailing, utility and service requirements, and construction costs caused by the requested substitution.
3. Substitutions shall have no adverse effect on other trades, the construction schedule, or specified warranty requirements.
4. Maintenance and service parts shall be locally available for the proposed substitution.

F. Samples: Submit two (2) samples of each type of specified finish and color specified.

G. Certifications: As a condition of acceptance, submit certification stating that equipment is complete and ready for intended function.

H. Operations/Maintenance Manuals: Accompanying certification, submit for Architect’s review and Owner’s use, complete operating and maintenance manuals that describe proper operating procedures, maintenance and replacement schedules, components parts list, and closest factory representative for components and service.

1.6 PRODUCT HANDLING

A. Protection: Use all means necessary to protect work of this section before, during and after installation including installed work and materials of other trades.

B. Replacement: Any damaged work shall be replaced, repaired and restored to original condition to the approval of the Architect at no additional cost or inconvenience to the Owner.

1.7 QUALIFICATIONS

A. Work in this section shall be performed by a company having a minimum of eight years documented experience, and an established organization and production facilities including all tools, equipment and special machinery necessary for specializing in the fabrication and installation of the type of equipment required, with skilled personnel, factory trained workmen and an experienced engineering department. Each shall have the demonstrated knowledge, ability and the proven capability to produce the specified equipment of the required quality and
the proven capacity to complete an installation of this size and type within the required time limits.

B. Work in this Section requires close coordination with Work in electrical and mechanical Sections. Coordinate all Work to assure an orderly progress in the Project, without removal of previously installed Work, and so as to prevent damage to finishes and products.

C. Review conditions of installation, procedures and coordination with related Work.

D. Carefully inspect the installed Work specified in other Sections and verify that all such Work is complete and ready for the installation of this Work to properly commence.

E. Verify that all Work may be installed in complete accordance with the original design, reviewed submittals and manufacturer's recommendations.

1.8 WARRANTY

A. All products will be warranted to be free from defects in materials and workmanship for a period of one year following substantial completion. The manufacturer/dealer/subcontractor shall repair or replace any products (or parts thereof) that are found to be defective. Replacement will include any parts, labor, shipping, and travel expenses involved. Warranty replacement work must be scheduled in coordination with the Owner's academic/research schedule, and may therefore require evening and/or weekend work.

PART 2 - PRODUCTS

2.1 GENERAL

A. All service fittings and emergency plumbing fixtures shall be specifically designed for laboratory use.

B. Service fittings, emergency fixtures, sinks, etc. specified in this Section shall be furnished and delivered to point of use for installation as specified in Division 22.

C. All service fittings shall be factory pre-assembled including the assembly of valves to turrets, mounting shanks to turrets, etc., and individually factory tested.

D. All laboratory service fittings shall be the product of one service fitting manufacturer to assure ease of replacement and maintenance.

E. All service valves, fittings, turrets, flange and accessories shall be forged brass with a minimum copper content of 85%.

F. Provide fittings as shown in laboratory fitting details for all laboratory equipment at locations shown on the Laboratory Furnishings drawings. See Service Fitting Schedule.

G. Assembly components and operating parts such as valve stems, renewable units, packing nuts, outlet nozzles and straight serrated hose ends shall be made from solid brass stock.

H. Replaceable seats, needle cones, valve disc screws and other accessories shall be Monel or stainless steel alloys especially selected for use intended.
I. Fittings shall be factory tested and shall be supplied with nipples, lock nuts, shanks, etc.

J. Serrated tip fittings shall be threaded with the hose end being tapered.

K. Turrets shall be brass drop forging of design indicated in details shown elsewhere in the Section and shall be one or two-way, as required, with 3/8 inch (9.525 mm) IPS female inlet thread for connections. Units shall be furnished with brass shanks, brass locknuts, and washers.

L. Fittings located on the same plane shall have their handles project the same distance from the plane of reference to present a uniform related appearance, regardless of valve type construction.

M. Flanges shall be brass forging of approved design with 3/8 inch (9.525 mm) IPS female inlet and outlet.

N. All goosenecks shall provide full thread for attachment of aerator or serrated hose ends.

O. Hot water/cold water gooseneck mixers and wall-mounted cold water goosenecks shall swivel. Swivel point shall be above valve body or at valve level if wall mounted. Swing joints shall have heavy Teflon type packings; "0" rings will not be permitted. Cold water goosenecks at cup sinks shall be rigid.

P. All fittings shall have plastic colored service index buttons as specified in this Section.

Q. Provide approved backflow preventers at hand held drench hoses. See details on Laboratory Furnishings drawings.

R. Provide durable 1 inch x 3 inch (25 x 75 mm) sign "NONPOTABLE WATER, DO NOT DRINK" at each bench mounted industrial water fitting, see details on Laboratory Furnishings drawings.

S. Fittings and fixtures designated to be accessible to persons with disabilities (ADA) with operable parts shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist. The force required to activate operable parts shall be 5 pounds (22.2 N), maximum.

2.2 LABORATORY SERVICE FITTINGS

A. Manufacturers:

1. Products, which comply with this specification section as judged and approved by the Architect, may be provided by the following manufacturers. All products specified in this section shall be provided by a single manufacturer.

   a. Water Saver Faucet Co., 701 West Erie Street, Chicago, IL 60610 Tel: 312 666-5500.
   b. T&S Brass and Bronze Works, Inc., 2 Saddleback Cove, P. O. Box 1088, Travelers Rest, SC 29690 Tel: 800 476-4103.
   c. Broen-Lab, Inc., 15 Constitution Dr., Ste. 122, Bedford, NH 03110 Tel: 603 310-5088.
   d. Approved substitution.

B. Cylindrical Pattern:

1. All service fittings shall have WaterSaver Standard turret style (not ColorTech) as the basis of design.
C. Handles:

1. Faucets designated to be accessible to persons with disabilities (ADA): provide 4 inch "wrist-blade" handles with color coded screw-on index (identification) discs. Wrist-blade handles to be installed in the vertical position (off).
2. Laboratory air and vacuum valves at workstations indicated to be accessible to persons with disabilities (ADA) and all laboratory gas valves: Provide ball valves fitted with lever-type handles and color coded screw-on index (identification) discs.
3. Other fittings shall be fitted with four arm handles and color coded screw-on index discs.

D. Finish: As described elsewhere in this section.

E. Water Valves:

1. Water valves shall include a renewable unit containing all the working parts which are subject to wear, including stainless steel or monel seat, monel screw and heavy duty seat disk and Teflon packing.
2. Volume control at deck mounted water faucets:
   a. Compression unit with integral adjustable volume control to regulate size of inlet port of valve.
   b. 3/8 inch NPS male inlet aerator with flow control inserts.
3. Volume control at fume hood water outlets: Serrated hose end shall have a 0.5 GPM removable flow restrictor insert to allow a perfect flow out of the outlet and eliminate any splashing or wide pattern spray.
4. Goosenecks: Unit shall be capable of being readily converted from compression to self-closing, and vice versa, without disturbing faucet body and shall also be capable of being readily converted from water construction to needle valve or steam valve construction having outside packing gland without disturbing faucet body.
5. Unit shall be sealed in valve body with special composition gasket. Metal-to-metal or ground joint type of sealing is not acceptable.
6. Water fixtures shall be fully assembled and factory tested at 80 psi (0.55 MPa) water pressure.

F. Needle Valves: Fully assembled and factory tested at 225 psi (1.55 MPa) air pressure. Gas, air, vacuum and steam needle valve fittings shall have stainless steel replaceable floating cone that is precision ground and self-centering which shall seat against a stainless steel or monel renewable valve seat. Action of valve shall be slow compression for fine control under pressure up to 150 psi (1.03 MPa) and shall have subject-to-wear parts easily replaceable. Provide pressure regulators designed for use with the appropriate service at locations indicated on the Laboratory Furnishing drawings. Needle valves for fuel (laboratory) gas service shall be certified for use with fuel gas by the Canadian Standards Association under ANSI Z21.15-2009/CGA 9.1-2009. Needle valves in fume hoods shall be mounted on the front panel of the fume hood, with all components subject to wear accessible from the exterior face of the hood.

G. Laboratory Ball Valves: Suitable for laboratory gas, air and vacuum and be supplied fully assembled and factory tested at 125 psi (0.86 MPa) air pressure. Ball valves shall be of quarter-turn (closed to fully open) design, be fitted with lever handle requiring less than 5 lbf (22 N) force to operate, and shall have subject-to-wear parts easily replaceable. Ball valves for fuel (laboratory) gas service shall be certified for use with fuel gas by the Canadian Standards Association under ANSI Z21.15-2009/CGA 9.1-2009.

H. High Purity Water Valves: Suitable for purified water and provided with polypropylene liner. Valve stem and bonnet shall be brass.

2.3 LABORATORY EMERGENCY PLUMBING FIXTURES

A. Manufacturers:
   1. Products, which comply with this specification section as judged and approved by the Architect, may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.
      a. Water Saver Faucet Co., 701 West Erie Street, Chicago, IL 60610 Tel: 312 666-5500.
      b. Guardian Equipment, 1104N North Branch St., Chicago, IL 60642 Tel: 312 447-8100.
      c. Haws Corporation, 1455 Kleppe Lane, Sparks, NV 89431 Tel: 775 359-4712.
      d. Approved substitution.

C. All emergency plumbing fixtures shall be accessible to persons with disabilities in compliance with the requirements of the federal Americans with Disabilities Act (ADA), ADA Accessibility Guidelines (ADAAG), and state accessibility regulations.

D. Barrier-free safety station with emergency shower actuation valve in stainless steel cabinet for recess mounting and wall-mounted eyewash with stainless steel skirt: Water Saver Model No. SSBF670-721, or equal, with the following characteristics or modifications.
   1. Ceiling-mounted exposed showerhead. Nipple length shall be as required for a complete installation; verify finished ceiling height.
   2. Exposed piping, showerhead, nipple, and escutcheon shall be chrome-plated brass with clear epoxy coating.
   3. Safety shower actuating arm shall be stainless steel.
   4. Showerhead shall have perforated stainless steel spreader.
   5. Safety shower actuating arm shall be mounted in a flanged, recessed-mounted 18 gauge (1.3 mm) stainless steel cabinet with No. 4 finish.
   6. Flag/paddle shall be epoxy-coated cast aluminum or stainless steel.
   7. Eyewash heads shall be ABS plastic with float-off dust covers.
   8. Stainless steel skirt shall have No. 4 finish.
   10. Fixture shall be furnished with green plastic sign with graphic symbol for safety shower/eyewash.
E. Barrier-free safety station with swing-down eye/face wash, drain pan and emergency shower actuation valve in stainless steel cabinet for recessed mounting: Water Saver Model No. SSBF2150, or equal, with the following characteristics or modifications.

1. Ceiling-mounted exposed showerhead. Nipple length shall be as required for a complete installation; verify finished ceiling height.
2. Exposed piping, showerhead, nipple, and escutcheon shall be chrome-plated brass with clear epoxy coating.
3. Safety shower actuating arm shall be stainless steel.
4. Showerhead shall have perforated stainless steel spreader.
5. Eyewash heads shall be ABS plastic.
6. Eyewash flow shall be activated by swing-down actuation valve connected to eyewash piping.
7. Eyewash components and safety shower actuating arm shall be mounted in a flanged, recessed-mounted 18 gauge (1.3 mm) stainless steel cabinet with No. 4 finish. A stainless steel drain pan shall be integral with eyewash components and shall direct eyewash water to drain outlet in bottom of recessed mounting cabinet.
8. Stay-open brass ball valves concealed behind stainless steel/access panel housing.
9. Fixture shall be furnished with green plastic sign with graphic symbol for safety shower/eyewash.

1. Must be barrier free with supply arm angled downward so that spray heads are no more than 36 inches above finished floor in the down position.
2. Straight supply arm not meeting barrier free requirements is not acceptable and shall not be provided.
3. Coordinate configuration and location with other adjacent services.
4. Swing-down eye wash unit with dual gentle spray outlet heads and “AutoFlow” feature.
5. Heads shall be equipped with flip top dust cover that automatically releases with water pressure.
6. Furnish with inline backflow preventer at the inlet.
7. Strainer: Provide inline strainer to protect valve and spray heads.
8. Arm and elbow fitting shall be chrome-plated brass with clear epoxy coating.
9. Housing enclosure shall be stainless steel, Type 316.
10. Mounting shank.
11. Fixture shall be furnished with green plastic sign with graphic symbol for eyewash.

2.4 FINISHES

A. Service Fittings:

1. Polished chrome finish with clear, acid-resistant coating:
   a. Chrome finish: All exposed surfaces shall be polished and buffed, then electroplated with one layer of nickel and one layer of chrome. Each layer of plating shall completely cover all visible areas. Total plating thickness shall be not less than 0.4 mil (10 µm).
   b. Clear epoxy coating: Following plating, clear epoxy coating shall be applied to all exposed surfaces and then baked to permit curing. Surfaces shall have a minimum coating thickness of 2 mils (50 µm).

B. Service Fittings at Fume Hoods:
1. Preparation: Surfaces to be coated shall be polished or sandblasted to produce a uniform fine-grained surface and immersed in a phosphoric acid cleaning solution to remove thoroughly all oil, grease and other foreign substances.

2. Epoxy finish: Following cleaning, coating material shall be electrostatically applied to all exposed surfaces. After application, coating shall be fully baked to permit curing. Coating material shall be free-flowing epoxy powder with particle size of 1.4 to 2.8 mils (35 to 70 µm). Surfaces shall have a minimum finished coating thickness of 2 mils (50 µm).

3. Color:
   a. Fittings inside fume hoods shall have a colored finish color-coded to match the fitting service index color.

C. Performance requirements for coated finishes:

1. Chemical resistance:
   a. Fume Test: Suspend coated samples in a container of at least 6 cu. foot (170 L) capacity, approximately 12 inches (300 mm) above open beakers, each containing 100 mL of 70% nitric acid, 94% sulfuric acid and 35% hydrochloric acid, respectively. After exposure to these fumes for 150 hours, the finish on the samples shall show no discoloration, disintegration or other effects.
   b. Direct Application Test: Subject coated samples to the direct action of the following reagents and solvents at a temperature of 25°C dropping from a burette at the rate of 60 drops per minute for ten minutes. Finish on samples shall not rupture, though slight discoloration or temporary softening is permissible.

2. Mar and abrasion resistance: Coating material shall have a pencil hardness of 2H – 4H with adhesion substantial enough to withstand both direct and reverse impacts of 160 inch-pounds (18 Nm). Coating shall have excellent mar resistance and be capable of withstanding scuffing, marring and other ordinary wear.

3. Repairability: Scratches and other localized surface damage shall be field-repairable.

2.5 LABORATORY SINKS

A. Epoxy Resin:

1. Manufacturer: Manufacturer shall be the manufacturer of epoxy resin work surfaces specified in Section 115310.

2. Laboratory Sinks:

   a. Drop-in Type: Drop-in installation by Division 11 in epoxy resin work surface, sizes as indicated on drawings. Color to match work surface.

   b. Comply with the requirements of Section 115310 for epoxy resin.

   c. All exposed edges shall be radiused not less than 1/4 inch (6 mm).

   d. Tops without drain grooves: Sink shall be set 1/8 inch (3 mm) below the level of the adjacent surface.

   e. Provide epoxy resin sink outlet in color to match sink with strainer, stopper and open-end overflow, and install in sink with continuous bead of silicone sealant.

1) At black epoxy resin sinks, outlet shall be black polypropylene.
f. Provide tailpiece compatible with waste piping system for all sinks unless otherwise specified. Refer to Division 22 for piping requirements.

B. Stainless steel:
   1. Laboratory Sinks:
      a. Refer to Section 115310, Stainless Steel Fabrications.
      b. Provide stainless steel strainer, outlet, standpipe overflow and stopper for all sinks unless otherwise specified.
      c. Provide tailpipes compatible with waste piping system for all sinks unless otherwise specified. Refer to Division 22 for piping requirements.

PART 3 - EXECUTION

3.1 SITE CONDITIONS

A. Inspection:
   1. Prior to installation of fittings specified in Section 115343, carefully inspect the installed Work specified in other Sections and verify that all such Work is complete to the point where this installation may properly commence.
   2. Verify that all Work has been installed in complete accordance with the original design, approved submittals, and the manufacturer's recommendations.

B. Discrepancy:
   1. In the event of discrepancy, immediately notify the Architect.

3.2 PACKING AND DELIVERY

A. Deliver all fittings and fixtures to job site in recommended packaging, with each fitting individually packaged, marked, and scheduled for point of use.

B. Inventory fittings, at job site, verify that type and quantity are correct, and re-package until installed.

C. Store in clean, dry location.

3.3 INSTALLATION

A. Set internal volume control on all cup sink water fittings so that water does not splash out of sink.

B. Products to be installed in strict compliance with manufacturer's installation manuals and to comply with SEFA 2.

END OF SECTION
SECTION 115350 - LABORATORY EQUIPMENT

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Laboratory Glassware Washer/Dryers: Base Cabinet Height
B. Laboratory Sterilizers (Autoclaves): Small

1.2 RELATED SECTIONS

A. General and Supplementary Conditions and Division 1
B. Division 23: Mechanical
C. Division 22: Plumbing
D. Division 26: Electrical

1.3 REFERENCES

A. Comply with requirements of general and supplementary conditions and Division 1 as part of this specification.

1.4 DESCRIPTION

A. Furnish and install all laboratory equipment with necessary components and accessories required to ensure a complete installation and ready for intended use as specified herein and shown on the Laboratory Furnishings Drawings.
B. Provide side panels to cover all exposed sides of cabinet-type equipment designed for under-counter installation.
C. Work of this section requires close coordination with work of Division 22, 23 and 26 as well as installation of Owner furnished components and work specified in other Sections. Sequence all work to assure an orderly progress in the project without removal of previously installed work and so as to prevent damage to finishes and products.

1.5 SUBMITTALS

A. Refer to General Conditions and Division 1 “Submittal Procedures” for submittal requirements. In addition to these requirements, provide submittal requirements specified herein.
B. Submittal requirements:
   1. Submittal shall be prepared individually for this specification section. Arrange product data, drawings and information for submission in a complete set for this specification section.
2. Submittal shall contain complete data for all items of this specification section. Periodic or partial submittals of individual components within this specification section will be returned as incomplete and rejected.
3. Submittals shall be organized by specification sequence with section and paragraph number identified.
4. Equipment and components being proposed shall be clearly labeled with all options and accessories indicated and shall be for this specific project.

C. Shop Drawings: Submit complete shop fabrication and installation drawings, including plans, elevations, sections, details and schedules. Show relationship to adjoining materials and construction. Shop Drawings shall be in the form of reproducibles or photocopies, not to exceed 11 inches x 17 inches (A3) in size. Blueline prints are not acceptable.

D. Samples: Submit for Architect's approval two (2) samples of each type of specified finish and color range available.

E. Certifications: As a condition of acceptance, submit certification stating that equipment is complete and ready for intended function.

F. Operations/Maintenance Manuals: Accompanying certification, submit for Architect's review and Owner's use, complete operating and maintenance manuals that describe proper operating procedures, maintenance and replacement schedules, components parts list, and closest factory representative for components and service.

1.6 QUALIFICATIONS
A. Contractor for work in this section shall have an established organization and production facilities including all tools, equipment and special machinery necessary for specializing in the fabrication and installation of the type of equipment specified, with skilled personnel, factory trained workmen and an experienced engineering department. Each shall have the demonstrated knowledge, ability and the proven capability to produce the specified equipment of the required quality and the proven capacity to complete an installation of this size and type within the required time limits.

1.7 COORDINATION
A. Work of this Section requires close coordination with Work of Divisions 22, 23 and 26 and Work specified in other Sections. Sequence all Work to ensure an orderly progress in the project without removal of previously installed Work and so as to prevent damage to finishes and products.

1.8 SUBSTITUTIONS
A. Approved Substitution/Approved Equal: In addition to the items required in Division 1, all substitution requests shall include item-by-item comparison of the proposed substitution to this project specification. A copy of the project specification shall be submitted, with each item and subsection of the project specification marked as “Comply” or “Not Comply.” In any cases where “Not Comply” is indicated, an explanation of the relative advantages of the proposed design shall be provided.

B. Substitution shall not affect dimensions shown on Drawings.
C. The Contractor shall pay for changes to the building design, including engineering design, detailing, utility and service requirements, and construction costs caused by the requested substitution.

D. Substitutions shall have no adverse effect on other trades, the construction schedule, or specified warranty requirements.

E. Maintenance and service parts shall be locally available for the proposed substitution.

F. Regulatory: Specified products, materials, or systems for Project may include engineering or on file standards required by the Regulatory Agency. Contractor’s substitution of products, materials or systems may require additional engineering, testing, reviews, approvals, assurances, or other information for compliance with Regulatory Agency requirements or both. Contractor shall provide all Agency approvals or other additional information required and pay additional costs for required Architect’s services made necessary by the substitution at no increase in Contract Sum or schedule time, and as a part of substitution proposal.

1.9 PRODUCT HANDLING

A. Protection: Use all means necessary to protect work of this section before, during and after installation including installed work and materials of other trades.

B. Replacement: Any damage as a result of this contractors work will be replaced, repaired and restored to original condition to the approval of the Architect at no additional cost or inconvenience to the Owner.

1.10 WARRANTY

A. Refer to the General Conditions and Division 1 "Product Requirements" for warranty requirements. In addition to these requirements, all products will be warranted to be free from defects in materials and workmanship for a minimum period of one year following substantial completion. The manufacturer/dealer/subcontractor shall repair or replace any products (or parts thereof) that are found to be defective. Replacement will include any parts, labor, shipping, and travel expenses involved.

B. Autoclave chambers shall be warranted to be free from defects in materials and workmanship for a minimum period of 15 years following substantial completion.

PART 2 - PRODUCTS

2.1 LABORATORY GLASSWARE WASHER/DRYERS: BASE CABINET HEIGHT

A. Manufacturers/Models: Products, as listed below, which comply with this specification section as judged and approved by the Architect, may be provided by the following manufacturers, listed in alphabetical order:

   a. Model: Flaskscrubber

   a. Model: 815LX
   a. Model: G7883

   a. Model: Lab500SCL

5. Approved equal.

B. Description: Microprocessor-controlled laboratory glassware washer/dryer with purified water rinsing and with at least 9 automatic wash programs, capable of accepting optional inserts such as open baskets and spindles/injectors for open or injection cleaning of laboratory glassware on two rack levels.

C. Size:
   1. Minimum Chamber Dimensions: 20½ inches wide x 18½ inches high x 20 inches deep.
   2. Minimum Chamber Volume: 4.5 cubic feet.
   3. Maximum Overall Dimensions: 24½ inches wide x 34½ inches high x 27½ inches deep.

D. Door Configuration: Bottom-hinged, fold-down door with safety interlock.

E. Product Characteristics:
   1. Construction:
      a. Insulated, fully cabinet-enclosed unit to allow for freestanding or under-counter installation. See Laboratory Furnishing drawings for location.
      b. Chamber and door:
         1). Walls and ceiling, type 304 or 316 stainless steel
         2). Floor and door, type 304 or 316 stainless steel.
      c. Exterior: Type 304 stainless steel.
   2. Control System: Control panel with LCD display to indicate cycle times, temperature, and error messages.
   3. Operation/ Performance:
      a. Dual pump system with separate pumps for circulation and draining.
      b. Rotating upper and lower wash arms.
      c. Circulation pump: rated at a minimum of 92 gpm.
      d. Minimum Heater rating: 2 kW.
      e. Wash water temperature: Unit shall be capable of attaining a wash temperature of 199°F (93°C).
      f. Final rinse temperature: Unit shall be capable of attaining a final purified water rinse temperature of 199°F (93°C).
      g. Easily-removable filter system to catch debris at bottom of the chamber.
      h. Drying system: Unit can use any of the following drying systems:
         1). Gravity-convected drying via an electrical heating element.
         2). Drying via an electrical heating element with an internal chamber circulation fan.
         3). Non-filtered fan-driven drying system.
      i. Detergents: Unit shall be capable of operating with both detergent and neutralizer. Dispensing shall either be manual or automatic.
      j. Noise Level: Unit shall operate at a noise level not exceeding 70 dBA.

F. Utility Requirements:
1. Contractor to coordinate utility requirements with selected manufacturer’s installation guide. The utility requirements below are intended to be able to accommodate any of the specified units.

3. Cold water: Input pressure 29 to 87 psig.

4. DI rinse water: Input pressure 29 to 60 psig.

5. Electric: 208 V, 60 Hz, single-Phase, 12-40 A. Provide washer with cord and plug to match electrical receptacle.

6. Drain: Connect to sink tailpiece, standpipe, or into adjacent floor sink. Refer to drawings for details. Maximum flow rates: 10.5 gpm.

G. Listing:
1. Unit shall carry an ETL mark signifying certification to UL Standard 3101-1/61010-1 or CAN/CSA C22.2 No. 1010.1.

H. Accessories required:
1. Drain water cool-down kit.
2. Provide an initial set of detergent and neutralizer chemicals, sufficient for a minimum of 50 washes, per unit.
3. Glassware accessories:
   a. Lower rack with a minimum of 19 spindles to provide for injection cleaning for narrow-neck glassware.
   b. Utensil basket(s) of approximately 512 cubic inch capacity with lid/cover(s).
   c. Bottle insert for a capacity of a minimum of 18 bottles, and a nominal grid size of 70 mm x 70 mm; type 304 stainless steel.

2.2 LABORATORY STERILIZER (AUTOCLAVE): SMALL

A. Manufacturers: Products, which comply with this specification section as judged and approved by the Architect, may be provided by the following manufacturers. All products specified in this section shall be the provided by a single manufacturer.

6. Approved equal.

B. Description: Small size steam-jacketed sterilizer designed for use in Laboratory and industrial applications.

C. Chamber Size:
1. 20 inches x 20 inches x 38 inches (508 x 508 x 965 mm) nominal.

D. Door/Mounting Configuration:
1. Single door, cabinet enclosed unit.

E. Process Cycle Configuration:
1. Prevacuum: Prevacuum process shall be designed for fast, efficient sterilization of porous, heat- and moisture-stable materials, sterilization of liquids and media in
borosilicate glass containers with vented closures, and decontamination of supplies after laboratory procedures. Prevacuum sterilizer shall be equipped with prevacuum, gravity, liquid, leak test and daily air removal test cycles.

F. Steam Source:
   1. Integral electric carbon steel steam generator supplied with industrial water.

G. Product Characteristics:
   1. Construction:
      a. Shell Assembly: Double wall, jacketed and insulated. Type 316L stainless steel welded sterilizer pressure vessel and type 304L or 316L stainless steel jacket. ASME rated at design operating pressure with allowance to relief valve setpoint - minimum 45 psig (310 kPa). Polished and passivated internal surfaces. Steam supply opening inside chamber to be shielded by a Type 316L stainless steel baffle. Chamber designed for positive sloped drainage with screen drain inlet to prevent debris for entering drain piping.
      b. Door Assembly: Vertical sliding door. Type 316L stainless steel, insulated with jacket. Door suspended by cable/pulley or chain/sprocket supports attached to counterweight or dual-spring assembly. Steam or compressed air activated recessed door gasket seal. Equipped with mechanical safety locking mechanism to prevent door opening when chamber pressure exceeds 2 psi (14 kPa). Provide door safety switch to prevent addition of steam to chamber unless door is closed and locked.
      c. Front Cabinet Panel: Type 304 or 316L stainless steel with No. 4 finish. Hinged or removable for full access to sterilizer piping and control systems.
      d. Side Panels: Sterilizer to be enclosed by Type 304 or 316L stainless steel removable side panels with No. 4 finish. Sterilizer sub-frame to be equipped with a synthetic rubber gasket to ensure tight fit between cabinet panels.
      e. Vacuum System: Liquid-ring vacuum pump to reduce chamber pressure during prevacuum and post-drying phase.
      f. Plumbing: All valves, fittings, and other plumbing components shall be non-proprietary. Custom manifolds or distribution systems shall not be installed. The piping system shall be designed such that all valve types used are from the same manufacturer for ease of maintenance. All utility piping connections shall terminate within the confines of the sterilizer and to be accessible from the front or access side of the unit. Provide ASME approved pressure relief valves rated for pressure vessels.
      g. Electrical: Electrical components such as switches, relays, and wiring systems shall be non-proprietary. Electrical design and installation shall conform to NEC requirements. Provide appropriate enclosure for components to protect against wet and moist environments.
      h. Floor Stand: Sterilizer to be equipped with a leveling height-adjustable floor stand manufactured of extruded aluminum structural members or welded stainless steel, or welded carbon steel with corrosion protective finish.

2. Control System:
   a. General: The sterilizer control system shall monitor, control, display, and record all process parameters. The control system shall include a PLC controller, touch-screen operator interface control panel, printer, audible alert, and emergency manual off (EMO) safety switch.
   b. Programmable Logic Controller (PLC) Controller: Non-proprietary controller to display, monitor, and control all sterilizer operations and functions. Allen-Bradley® MicroLogix™ control system or equal.
c. Touch Screen Operator Interface Control Panel: Color active matrix (TFT) touch sensitive color interface screen. Allen-Bradley® PanelViewPlus™ or equal. Provide one screen on each side of pass-through units.

d. Printer: Alphanumeric ink-on-paper dot-matrix impact or permanent thermal paper printer with take-up spool.

e. Programming: All programming to be stored in non-volatile memory to retain programming during a power outage. Provide help menus/screens for programming and troubleshooting alarm conditions. Provide security features to prevent inadvertent or unauthorized process changes. Provide user programmable time-of-day utility startup/shutdown schedules for energy savings.

f. RS-232 or equivalent communication protocol for downloading cycle information.

g. USB or compact flash memory card slot for memory backup/restore and downloading cycle information.

H. Utilities:

1. Contractor to coordinate utility requirements with selected manufacturer’s installation guide. The utility requirements below are intended to accommodate any of the specified units.

2. Electric Steam Generator Unit:
   a. Drain: 1½ inch (38 mm) ODT.
   b. Generator drain: ½ inch (12.7 mm) ODT.
   c. Electrical Controls: 120V, 60 Hz.
   d. Electric Steam Generator: 480 V, 60 Hz, 3-phase.
   e. Electric Vacuum Pump: 480 V, 60 Hz, 3-phase
   f. Sterilizer feed water: Industrial cold water, 1 inch (25.4 mm) NPT, 30-50 psig (207-345 kPa) dynamic.
   g. Steam generator feed water: Industrial softened hot water, ½ inch (12.7 mm) NPT, 20-50 psig (138-345 kPa) dynamic.

I. Standards: Units shall conform to the applicable requirements of the following:

1. Underwriters Laboratories (UL).
3. NEC.
4. ASME Code, Section VIII, Division 1 for unfired pressure vessels.
5. ASME Code, Section I, Part PMB for power boilers.

J. Options Required:

1. Drain discharge cool down to limit discharge temperature into waste systems below 140°F.
2. Minimum 12-cycle capacity.
3. Seismic tie-down kit required to conform to local building codes.
4. Auto flush cycle for carbon steel steam generator with programmable timer/controls.
5. Power operated door.
6. Boiler Control and Safety Device (CSD-1) for secondary low water cut-off as required by local jurisdiction.
7. Air compressor if required. Provide wall mounted powder coated steel or stainless steel shelf to support air compressor as well as anchorage and vibration isolation. Coordinate with Division 26 to provide electrical receptacle on dedicated circuit adjacent to compressor. Coordinate with Division 23 to provide all necessary piping per manufacturer’s recommendations and local code requirements.

K. Accessories Required:

1. Rack and shelves.
PART 3 - EXECUTION

3.1 SITE CONDITIONS

A. Inspection: Prior to installation of laboratory equipment, carefully inspect the installed work specified in other Sections and verify that all such work is complete to the point where this installation may properly commence.

B. Discrepancies: In the event of discrepancy, immediately notify the Architect.

3.2 EXAMINATION

A. Examine surfaces designated to receive work for conditions that would adversely affect the finished work. Repair or replace surfaces not meeting tolerances or quality requirements governing substrate construction prior to start of work.

B. Verify that surfaces, prepared openings, or support structures are ready to receive work.

C. Verify field measurements and opening dimensions are as instructed by manufacturer.

D. Inspect and verify that the required utilities are available, in proper locations, prior to equipment installation.

3.3 WORK REQUIRED OF OTHER SECTIONS PRIOR TO INSTALLATION

A. Install shutoff valves on service lines.

B. Install fused disconnect switches (with lockout in OFF position) in electric supply lines near the equipment.

C. Provide building service lines supplying specified pressures and flow rates.

D. Provide recommended feed water quality for carbon steel steam generators as follows: Total hardness as CaCO3-max 85 mg/l; Total alkalinity as CaCO3-max 180 mg/l; Total dissolved solids-max 150 mg/l; Total Silica-max 2.5 mg/l; pH-7.5.

E. Provide illumination of service area, with provision of convenience outlet for maintenance.

3.4 INSTALLATION

A. General:
   1. Install all equipment per manufacturer's recommendations and reviewed submittals.
   2. Properly align and position all equipment.

B. Connection to Building Systems: See Laboratory Plumbing and Electrical drawings and Divisions 22 & 23 and 26 for final connections.
3.5 START UP AND TESTING

A. Test, clean, and adjust equipment and apparatus installed to ensure performance meets specified requirements.

B. Operate each unit and test full range of cycles over a continuous period. Record test data.

C. Adjust and re-test any units not meeting requirements.

3.6 DEMONSTRATION AND INSTRUCTIONS

A. Engage services of factory-qualified instructor to instruct and train Owner's operating and maintenance personnel in operation, service, and maintenance of equipment.

B. Test equipment prior to demonstration. Ensure equipment, including specified accessories, is operational.

C. Provide demonstration of equipment operation and instruction of Owner's personnel.

D. Demonstrate operating capability of equipment and systems. Include control and safety features, and service and maintenance procedures.

3.7 CLEANING AND PROTECTION

A. All equipment shall be protected before, during and after installation. Damage to material due to improper protection shall be cause for rejection.

B. Packaging and debris and other waste resulting from installation of equipment will be removed.

C. Repair or remove and replace defective Work as directed by the Architect upon completion of installation.

D. Clean finished equipment, touch up as required and remove and refinish damaged or soiled areas.

E. Prior to final acceptance by the customer, equipment that has become damaged will be repaired or replaced according to the terms of the warranty and any external soiled surfaces will be cleaned.

END OF SECTION
SECTION 120413 - COMMON SUBMITTAL REQUIREMENTS FOR FURNISHINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:
   1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.
   1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:
   1. Shop Drawings.
   2. Product Data.
   3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
   2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
   3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
   4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
      a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
   1. Refer to Section 01330 for quantity of days allowed for review.
   2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER’S AND GENERAL CONTRACTOR’S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect’s staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:

1. Action Codes Permitting Use:
   a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.
   b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.
   c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect's notations and Contract Document requirements.
d. Code AN-R - Approved as Noted - Resubmit: Do not deliver or install the related work until the resubmittal has received Code AP or AN. However, fabrication and other off-site work covered by the submittal item may proceed, at the Contractor's risk, provided it complies with the Architect's notations and Contract Document requirements.

2. Action Code Prohibiting Use:
   a. Action Code REJ - Not Approved: The Work covered by the submittal item, including purchasing, fabrication, delivery, and other activity, shall not proceed. Revise the submittal item or prepare a new item in accordance with the Architect's notations. Resubmit the corrected or new item without delay; do not permit submittal items marked "Not Approved" to be used. Work incorporating such items will be rejected.

3. Action Code for Items Not Required:
   a. Action Code X - Not Requested by Contract Documents: The submittal item is not called for by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

F. Informational Submittals: For Architect's information only. Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

1. Action Code for Information Only:
   a. Action Code INF - Information Only - Received: The submittal item is not called for a return with a reviewed action code by the Contract Documents and is being returned unreviewed by the Architect except to the extent necessary to determine its status.

G. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

H. Incomplete submittals are not acceptable, will be considered non-responsive, and will be returned without review.

I. Architect will return without review or discard submittals received from sources other than the Contractor.

J. Submittals not required by the Contract Documents may be returned by the Architect without action.
   1. Do not submit Material Safety Data Sheets. They will be returned without review or discarded.

3.3 SUBMITTAL TRANSMITTAL REQUIREMENTS

A. Submittal Transmittal shall be a PDF file in electronic format. It is recommended, to expedite the submittal review, the electronic form be emailed for review to the Architect as early as possible.
   1. Submittal Numbering: See below.
   2. Contact Information: Full Name, Phone Number and Email Address.

B. Submittal Definition
   1. Each submittal consists of items from only ONE Specifications section.
2. Complete Submittal: If ALL the items required by the Specifications section are listed on one Submittal Form (including continuation sheet), it is a complete submittal.

3. Partial Submittals: If it is necessary to divide the required items of a given Specifications section into two or more submittals to meet schedule or handling requirements, the separate submittals are partial submittals. All partial submittals have the same submittal number, and are differentiated by sequential P-numbers (see below).

4. All items in each submittal, whether complete or partial, will be processed together: Individual items will not be ‘broken out’ for special handling. Arrange submittals accordingly.

C. Submittal Numbering
   1. Number submittals as described below to assist tracking.
   2. Number each submittal in the format nnnnnn-nn.
      a. The 6-digit number is the number of the section that requires the submittal. For example, 044200.
      b. The 2-digit number is based on the numerical sequence of submittals from that section. In other words, for each section, the first submittal is 01, the second is 02, and so on. The 2-digit number does not change for partial or re-submittals, so that the submittal can be tracked.
      c. P-Number for Partial Submittals: Number each partial submittal in the pee space, beginning with P1, and increasing by one for each partial submittal of that submittal. If the submittal is a complete submittal, leave the P space blank.
      d. R-Number for Re-submittals: Number each re-submittal in the arr space, beginning with R1, and increasing by one for each re-submittal of that submittal. Do not include an R-Number for the initial submittal.
      e. Examples:

3.4 SUBMITTAL REVIEW SHEET REQUIREMENTS

A. Provide Submittal Review Sheet in PDF format. Submit as the page after the Submittal Transmittal.

B. When attached, the Submittal Review Sheet shall not obscure information contained in the submittal.

C. Do not edit any of the information contained within the Submittal Review Sheet except as follows:
   1. Submittal Number: See Submittal Numbering in Submittal Transmittal Requirements paragraph.

D. The Contractor shall submit the PDF file in a manner that will allow editing of the Submittal Review Sheet fields by SmithGroup and its consultants.

END OF SECTION
SECTION 122413 - ROLLER WINDOW SHADES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Manually operated roller shades.
   2. Electrically operated, roller shades. Include local and remote group and master motor control systems for shade operation with addressable, encoded, electronic drive units (EDU), remote control, and network interface.

B. Related Requirements:
   1. Division 06 Section for wood blocking and grounds for mounting roller shades and accessories.
   2. Division 26 and 27 - Electrical: Electric service for motors, motor controls, internal communication, low voltage wiring and data transfer, and connection to Internet.

1.3 ACTION SUBMITTALS

A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance Form may be submitted in lieu of required Product Data submittal. Ensure compliance with requirements included in Section 120413.

B. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, features, finishes, and operating instructions for roller shades.

C. Sustainable Design Submittals required by Section 01813 applicable to this Section.

D. Shop Drawings: Show fabrication and installation details for roller shades, including shadeband materials, their orientation to rollers, and their seam and batten locations.

E. Samples for Verification: For each type of roller shade.
   1. Shadeband Material: Not less than 10 inches square. Mark interior face of material if applicable.

F. Window Treatment Schedule: For roller shades.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For roller shades to include in maintenance manuals.
1.5 QUALITY ASSURANCE

A. Installer Qualifications: Installer trained and certified by roller shade manufacturer with a minimum of ten years experience installing products comparable to those specified in this section.

B. Fire-Test-Response Characteristics: Passes NFPA 701 small and large-scale vertical burn. Materials tested shall be identical to products proposed for use.

C. Electrical Components: NFPA Article 100 listed and labeled by either UL or ETL or other testing agency acceptable to authorities having jurisdiction, marked for intended use, and tested as a system. Individual testing of components will not be acceptable in lieu of system testing.

D. ShadeCloth Anti-Microbial Characteristics: 'No Growth' per ASTM G 21

E. Provide the following upon request:
   1. Qualification Data: For Installer.
   2. Product Certificates: For each type of shadeband material.
   3. Product Test Reports: For each type of shadeband material, for tests performed by manufacturer and witnessed by a qualified testing agency or by a qualified testing agency.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver roller shades in factory packages, marked with manufacturer, product name, and location of installation using same designations indicated on Drawings.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not install roller shades until construction and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify Architect of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain roller shades and electronic controllers from single source from single manufacturer including shades, hardware, shade fabric, motors, network interface devices, and related controllers furnished and installed as a complete two-way communicating system and assembly.

B. Basis-of-Design Product: Subject to compliance with requirements, provide products by MechoShade Systems, Inc., or comparable product by one of the following:
1. Draper Inc.
3. Lutron Electronics Co., Inc.

2.2 MANUALLY OPERATED SHADES WITH SINGLE ROLLERS – TYPE 1

A. Chain-and-Clutch Operating Mechanisms: With continuous-loop bead chain and clutch that stops shade movement when bead chain is released; permanently adjusted and lubricated.
      a. Limit Stops: Provide upper and lower ball stops.
      b. Chain-Retainer Type: Clip, jamb mount.
   2. Spring Lift-Assist Mechanisms: Manufacturer's standard for balancing roller shade weight and for lifting heavy roller shades.
      a. Provide for shadebands that weigh more than 10 lb or for shades as recommended by manufacturer, whichever criterion is more stringent.

B. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
   1. Shadeband-to-Roller Attachment: Manufacturer's standard method.

C. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.

D. Shadebands:
   2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
      a. Type: Enclosed in sealed pocket of shadeband material.

E. Installation Accessories:
   1. Recessed Shade Pocket: Rectangular, extruded-aluminum enclosure designed for recessed ceiling installation; with front, top, and back formed as one piece, end plates, and removable bottom closure panel.
      a. Provide pocket with lip at lower edge to support acoustical ceiling panel.

2.3 MANUALLY OPERATED SHADES WITH DOUBLE ROLLERS – TYPE 2

A. Chain-and-Clutch Operating Mechanisms: With continuous-loop bead chain and clutch that stops shade movement when bead chain is released; permanently adjusted and lubricated.
      a. Limit Stops: Provide upper and lower ball stops.
      b. Chain-Retainer Type: Clip, jamb mount.
   2. Spring Lift-Assist Mechanisms: Manufacturer's standard for balancing roller shade weight and for lifting heavy roller shades.
a. Provide for shadebands that weigh more than 10 lb or for shades as recommended by manufacturer, whichever criterion is more stringent.

B. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
   1. Double-Roller Mounting Configuration: Offset, outside roller over and inside roller under.
   2. Shadeband-to-Roller Attachment: Manufacturer's standard method.

C. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller mounting configuration, roller assemblies, operating mechanisms, installation accessories, and installation locations and conditions indicated.

D. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers into a multiband shade that is operated by one roller drive-end assembly.

E. Inside Shadebands:
   2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
      a. Type: Enclosed in sealed pocket of shadeband material.

F. Outside Shadebands:
   2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
      a. Type: Enclosed in sealed pocket of shadeband material.

G. Installation Accessories:
   1. Recessed Shade Pocket: Rectangular, extruded-aluminum enclosure designed for recessed ceiling installation; with front, top, and back formed as one piece, end plates, and removable bottom closure panel.
      a. Provide pocket with lip at lower edge to support acoustical ceiling panel.
   2. Side Channels: With light seals and designed to eliminate light gaps at sides of shades as shades are drawn down. Provide side channels with shadeband guides or other means of aligning shadebands with channels at tops.
   3. Bottom (Sill) Channel or Angle: With light seals and designed to eliminate light gaps at bottoms of shades when shades are closed.
   4. Installation Accessories Color and Finish: As selected from manufacturer's full range.

2.4 MOTOR-OPERATED, SINGLE-ROLLER SHADES – TYPE 3

A. Motorized Operating System: Provide factory-assembled, shade-operator system of size and capacity and with features, characteristics, and accessories suitable for conditions indicated, complete with electric motor and factory-prewired motor controls, power disconnect switch, enclosures protecting controls and operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
   1. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   2. Electric Motor: Manufacturer's standard tubular, enclosed in roller.
b. Maximum Total Shade Width: As required to operate roller shades indicated.
c. Maximum Shade Drop: As required to operate roller shades indicated.
d. Maximum Weight Capacity: As required to operate roller shades indicated.

3. Remote Control: Electric controls with NEMA ICS 6, Type 1 enclosure for recessed or flush mounting. Provide the following for remote-control activation of shades:
   a. Keyed Control Station: Keyed, momentary-contact, three-position, switch-operated control station with open, close, and off functions. Provide two keys per station.
   b. Color: As selected by Architect from manufacturer's full range.

4. Crank-Operator Override: Crank and gearbox operate shades in event of power outage or motor failure.

5. Limit Switches: Adjustable switches interlocked with motor controls and set to stop shades automatically at fully raised and fully lowered positions.

6. Operating Features:
   a. Individual and group switching with wireless intelligent network control system.
   b. Integrated local switch control; single faceplate for multiple switch cutouts.
   c. Capable of accepting future input from building automation control system.
   d. Override switch.

B. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
   1. Roller Drive-End Location: Right side of interior face of shade.
   2. Direction of Shadeband Roll: Regular, from back (exterior face) of roller.

C. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.

D. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers that are operated by one roller drive-end assembly.

E. Shadebands:
   2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
      a. Type: Enclosed in sealed pocket of shadeband material.
      b. Color and Finish: As selected by Architect from manufacturer's full range.

F. Installation Accessories:
   1. Recessed Shade Pocket: Rectangular, extruded-aluminum enclosure designed for recessed ceiling installation; with front, top, and back formed as one piece, end plates, and removable bottom closure panel.
      a. Height: Manufacturer's standard height required to enclose roller and shadeband assembly when shade is fully open, but not less than 4 inches.
      b. Provide pocket with lip at lower edge to support acoustical ceiling panel.
   2. Closure Panel and Wall Clip: Removable aluminum panel designed for installation at bottom of site-constructed ceiling recess or pocket and for snap-in attachment to wall clip without fasteners.
      a. Closure-Panel Width: 2 inches.
   3. Installation Accessories Color and Finish: As selected from manufacturer's full range.
2.5 SHADEBAND MATERIALS

A. Shadeband Material Flame-Resistance Rating: Comply with NFPA 701. Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

B. Light-Filtering Fabric: Woven fabric, stain and fade resistant.
   1. Source: Roller shade manufacturer.
   2. Openness Factor: 1 percent, fabric type as selected by Architect.
   3. Color: As indicated on Drawings.

   1. Source: Roller shade manufacturer.
   3. Color: As indicated on Drawings.

2.6 INTELLIGENT ENCODED ELECTRONIC DRIVE SYSTEM (120VAC)

A. Electronic Drive Unit (EDU):
   1. Intelligent Encoded EDU, and Control System: Quiet, tubular, asynchronous (non-synchronous) EDU's, with built-in ac motor and reversible capacitor operating at 120VAC/60Hz, (230VAC/50Hz) single phase, temperature Class B, thermally-protected, totally enclosed, maintenance-free and powered by a line voltage power supply connection equipped with locking disconnect plug assembly furnished with each EDU.
   2. EDU shall be concealed inside shade roller tube.
   3. Provide EDU with the ability to upgrade firmware inside the motor from anywhere on the network without touching the motor.

B. EDU System: (software, two-way communication):
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following or comparable by listed manufacturer:
      a. MechoSystems; WhisperShade IQ2 System.
   2. EDU and control systems not in complete compliance with these performance criteria shall not be accepted as equal systems. EDU shall support two methods of control:
      a. Local Isolated Dry Contact Control Inputs: EDU shall be equipped with dry contact inputs to support economical motor control as well as integration to third party systems without adding any interface modules. The dry contact inputs shall support moving the EDU/shade to the upper and lower limits as well as to local switch preset positions. They shall also support configuring the EDU under protected sequences so that a typical user would not change the EDU's setup. At a minimum the configuration should include setting limits, setting custom presets and configuring key modes of operation without requiring a PC or other similar microprocessor-driven tool.
      b. Network Control: EDU shall be equipped with a bi-directional network communication capability in order to support commanding the operation of large groups of shades over a common backbone. The network communication card shall be embedded into the tubular EDU assembly. Upper and lower stopping points (operating limits) of shade bands shall be programmed into EDU's using either a hand held removable program module / configurator or a local switch.

C. Alignment Positions: Each EDU shall support multiple repeatable and precisely aligned shade positions (including limits and presets).
D. Local Switch Presets: A minimum of 3 customizable preset positions shall be accessible over the local dry contact control inputs and over the network connection.

E. Network Presets: Customizable preset positions (including local switch presets) shall be accessible via network commands.

F. Network Control: Capable of two-way digital communication with the EDU's over a common backbone.

G. Low Voltage Communication Network Implementation.

H. Network Capacity: capable up to 4000 feet, with 250 nodes.

I. Uniform or Normal Modes of Operation: Uniform mode shall allow for shades to only move to defined intermediate stop positions to maintain maximum uniformity and organization. Normal Mode shall allow for shades to move to both intermediate stop positions, plus any position desired between the upper and lower limits as set by the installer.

2.7 WIRELESS CONTROLLERS

A. Wireless Controllers (MWC):
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following or comparable by listed manufacturer:
      a. MechoSystems; EnOcean to network interface gateway, router and controller.

2.8 WALL SWITCHES

A. Wired Wall Switches: Shades shall be operated by 2, 4, 5, 7, or 10 button low voltage standard switches. Standard switch shall be wired to a network interface and be programmed to transmit an address for the local switch. An address that is transmitted by either a switch or central controller shall be responded to by those EDU's with the same address in their control table. Standard switch may control an individual, sub-group or group of EDU's in accordance with the address in each EDU.

B. Wireless Wall Switches: Shades shall be operated by 2 button wireless standard switches in conjunction with MWC will be programmed to wireless transmit via 902 MHz RF an address for the local switch. An address that is transmitted by either a switch or central controller shall be responded to by those EDU's with the same address in their control table. Standard switch may control an individual, sub-group or group of EDU's in accordance with the address in each EDU.

2.9 NETWORK INTERFACE

A. Network Interface:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide the following or comparable by listed manufacturer:
      a. MechoSystems; MechoNet.
2.10 ROLLER SHADE FABRICATION

A. Product Safety Standard: Fabricate roller shades to comply with WCMA A 100.1, including requirements for flexible, chain-loop devices; lead content of components; and warning labels.

B. Unit Sizes: Fabricate units in sizes to fill window and other openings as follows, measured at 74 deg F:
   1. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which shade is installed less 1/4 inch per side or 1/2-inch total, plus or minus 1/8 inch. Length equal to head-to-sill or -floor dimension of opening in which shade is installed less 1/4 inch, plus or minus 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, locations of connections to building electrical system, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ROLLER SHADE INSTALLATION

A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions.
   1. Opaque Shadebands: Located so shadeband is not closer than 2 inches to interior face of glass. Allow clearances for window operation hardware.

B. Roller Shade Locations: As indicated on Drawings.

3.3 INSTALLATION OF CONTROL SYSTEMS

A. Install control systems in accordance with manufacturer's recommendations and approved submittals.

B. Participate and cooperate with the electrical contractor, shade manufacturer and the commissioning agent to verify and certify the installation is in full conformance with the specifications and is fully operational. This work to occur during the commissioning stage and is in addition to preliminary acceptance required for each floor.

3.4 ADJUSTING

A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.
3.5 CLEANING AND PROTECTION
   A. Clean roller shade surfaces, after installation, according to manufacturer's written instructions.
   B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.
   C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.6 DEMONSTRATION
   A. Engage a factory-authorized service representative to train District's maintenance personnel to adjust, operate, and maintain motor-operated roller shades.

END OF SECTION
SECTION 123661.16 - SOLID SURFACING COUNTERTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Solid surface material countertops.
2. Solid surface material backsplashes.
3. Solid surface material end splashes.
4. Solid surface material apron fronts.
5. Solid surface material sinks.

B. Related Requirements:
1. Section 055000 "Metal Fabrications" for miscellaneous steel brackets and supports for wall-mounted countertops and vanities.
2. Section 061000 "Rough Carpentry" for support framing, grounds, and concealed blocking.
3. Division 22 section for "Plumbing Fixtures" for non-integral sinks and plumbing fittings.

1.3 ACTION SUBMITTALS

A. Product Data: For countertop materials.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.
   1. Show locations and details of joints.
   2. Show attachment to subtop and subtop attachment to adjoining structure.

D. Samples for Verification: For the following products:
   1. Countertop material, 6 inches square.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For solid surface material countertops to include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.
1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate countertops similar to that required for this Project, and whose products have a record of successful in-service performance.

B. Installer Qualifications: Fabricator of countertops.

C. Provide the following upon request:
   1. Qualification Data: For fabricator.

D. Mockups: Build in-place mockups to demonstrate aesthetic effects and to set quality standards for fabrication and execution.
   1. Build mockup of typical countertop as shown on Drawings; not less than 60 inch long counter with backsplash.
   2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 FIELD CONDITIONS

A. Field Measurements: Verify dimensions of countertops by field measurements after base cabinets are installed but before countertop fabrication is complete.

1.7 COORDINATION

A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

PART 2 - PRODUCTS

2.1 SOLID SURFACE COUNTERTOP MATERIALS

A. Solid Surface Material: Homogeneous-filled plastic resin complying with ICPA SS-1.
   1. Manufacturers: Subject to compliance with requirements, [provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporates into the Work include, but are not limited to, the following]:
   2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      a. Avonite Surfaces.
      c. Formica Corporation.
      d. LG Chemical, Ltd.
      e. Wilsonart International Holdings, Inc.
   3. Type: Provide Standard type unless Special Purpose type is indicated.
   5. Colors and Patterns: As indicated by manufacturer’s designations.
B. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.

C. Plywood: Exterior softwood plywood complying with DOC PS1, Grade C-C Plugged, touch sanded, vented.

D. Marine-grade Plywood: APA FIR HDO MARINE 3/4" according to Voluntary Product Standard PS 1-95 "Construction and Industrial Plywood" adhered with exterior glue, vented. Use at countertops with sinks.

2.2 COUNTERTOP FABRICATION

A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."
   1. Grade: Custom.

B. Configuration:
   1. Front: Straight, slightly eased at top.
   2. Backsplash: Straight, slightly eased at corner.

C. Countertops: 3/4-inch thick, solid surface material with front edge built up with same material.

D. Backsplashes: 1/2-inch thick, solid surface material.

E. Fabricate tops with shop-applied edges and backsplashes unless otherwise indicated. Comply with solid surface material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
   1. Fabricate with loose backsplashes for field assembly.
   2. Install integral sink bowls in countertops in the shop.

F. Joints: Fabricate countertops without joints.

G. Subtop Venting: Provide drilled holes according to countertop material manufacturer's instructions, or provide ladder-framed plywood subtop to equalize temperature and humidity on both sides of countertop.

H. Cutouts and Holes:
   1. Undercounter Plumbing Fixtures: Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
      a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch into fixture opening.
      b. Provide vertical edges, rounded to 3/8-inch radius at juncture of cutout edges with top surface of countertop, slightly eased at bottom, and projecting 3/16 inch into fixture opening.
      c. Provide 3/4-inch full bullnose edges projecting 3/8 inch into fixture opening.
3. Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.

2.3 INSTALLATION MATERIALS

A. Adhesive: Product recommended by solid surface material manufacturer.
   1. Adhesives shall have a VOC content of [70] \(<\text{Insert value}\) g/L or less.
   2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Sealant for Countertops: Comply with applicable requirements in Section 079200 "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates to receive solid surface material countertops and conditions under which countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of countertops.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install countertops level to a tolerance of 1/8 inch in 8 feet, 1/4 inch maximum. Do not exceed 1/64-inch difference between planes of adjacent units.

B. Wall-mounted subtops: Fasten subtops to wood nailers attached to wall-supported steel brackets. Predrill holes for screws as recommended by manufacturer. Shim as needed to align subtops in a level plane.

C. Base-mounted subtops: Fasten subtops to cabinets by screwing through subtops into cornerblocks of base cabinets. Predrill holes for screws as recommended by manufacturer. Shim as needed to align subtops in a level plane.

D. Install countertops over subtops with full spread of water-cleanable epoxy adhesive according to solid surface material manufacturer's written instructions.

E. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.

F. Bond joints with adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
   1. Install metal splines in kerfs in countertop edges at joints. Fill kerfs with adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
2. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.

G. Install backsplashes and end splashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.

H. Install aprons to backing and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Fasten by screwing through backing. Predrill holes for screws as recommended by manufacturer.

I. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.

1. Seal edges of cutouts in particleboard subtops by saturating with varnish.

J. Apply sealant to gaps at walls; comply with Section 079200 "Joint Sealants."

END OF SECTION
SECTION 124813 - ENTRANCE FLOOR MATS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS
   A. Drawings and general provisions of the Contract, including General and Supplementary
      Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY
   A. Section Includes:
      1. Rubber-backed woven carpet entry mats.

1.3 ACTION SUBMITTALS
   A. Submittal Compliance Form: If Basis-of-Design products are provided, Submittal Compliance
      Form may be submitted in lieu of required Product Data submittal. Ensure compliance with
      requirements included in Section 120413.
   B. Product Data: For each type of product.
      1. Include construction details, material descriptions, dimensions of individual components
         and profiles, and finishes for floor mats and frames.
   C. Sustainable Design Submittals required by Section 01813 applicable to this Section.
   D. Samples: For the following products, in manufacturer's standard sizes:
      1. Floor Mat: Assembled sections of floor mat.

1.4 CLOSEOUT SUBMITTALS
   A. Maintenance Data: For floor mats and frames to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS
   A. Furnish extra materials that match products installed and that are packaged with protective
      covering for storage and identified with labels describing contents.
      1. Entrance Mats: Full-size tile roll equal to 2 percent of amount installed, but no fewer than
         60 square feet.
PART 2 - PRODUCTS

2.1 ENTRANCE FLOOR MATS AND FRAMES, GENERAL

A. Accessibility Standard: Comply with applicable provisions in the DOJ's "2010 ADA Standards for Accessible Design" and CBC Title 24 Chapter 11B.

2.2 RUBBER-BACKED ENTRY MATS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. Interface.
   2. Amaro Products.

B. Characteristics:
   1. Pile Height: 3/8 inch.
   2. Total Thickness: 1/2 inch
   3. Pile Weight: 52 oz/sq. yd.
   4. Surface Flammability: ASTM D 2859; Pass
   5. Static Electrical Propensity: Less than 2 kV

2.3 FABRICATION

A. Floor Mats: Shop fabricate units to greatest extent possible in sizes indicated. Unless otherwise indicated, provide single unit for each mat installation; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. If necessary, form seams as instructed by manufacturer.

B. Recessed Mats: As indicated, for permanent recessed installation, coordinate depth with concrete placement.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and floor conditions for compliance with requirements for location, sizes, [minimum recess depth, ]and other conditions affecting installation of floor mats and frames.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install recessed mats to comply with manufacturer's written instructions so that tops of mats will be flush with adjoining finished flooring. Set mats with tops at height recommended by manufacturer for most effective cleaning action; coordinate tops of mat surfaces with bottoms of doors that swing across mats to provide clearance between door and mat.
1. Install necessary shims, spacers, and anchorages for proper location, and secure attachment of frames.
2. Delay setting mats until construction traffic has ended.

3.3 PROTECTION

A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

END OF SECTION
SECTION 126100 - FIXED AUDIENCE SEATING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes fixed audience sequence seating with the following:
   1. Beam mounting.
   2. Molded-plastic chairs with foldaway tablet arms.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of components, and finishes for fixed audience seating.

B. Sustainable Design Submittals required by Section 01813 applicable to this Section.

C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   1. Seating Layout: Show seating layout, aisle widths, aisle-end alignment or stepping, row-lettering and chair-numbering scheme, chair widths, and chair spacing in each row.
   2. Accessories: Show locations and features of accessories, including left- and right-hand tablet arms, and accessibility provisions.

D. Samples for Initial Selection: For each type of exposed color, finish, texture, and pattern indicated.
   1. Include Samples of accessories involving color and finish selection.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
   1. Chair Unit: Full-size unit of each type and combination of finishes.
   2. Accessible tablet arm surface with embedded logo.
   3. Molded Plastic: Manufacturer’s standard-size unit, not less than 3 inches square.
   4. Plastic Laminate: Manufacturer’s standard-size unit, not less than 3 inches square.
   5. Baked-on Coating Finishes: Manufacturer’s standard-size unit, not less than 3 inches square.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fixed audience seating to include in operation and maintenance manuals.
1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials from the same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Chair Seats and Backs: 2 percent of quantity installed for each type and size of chair seat and back.
2. Tablet Arms: 5 percent of quantity installed for each type and size of tablet arm; left- and right-hand mounted.
3. Chair Back Articulation Hinges: 5 percent of quantity installed with replacement bellows.

1.6 QUALITY ASSURANCE

A. Provide the following upon request:

1. Product Certificates: For each type of fixed audience seating.
2. Field quality-control reports.

B. Mockups: Build mockups to verify selections made under Sample submittals, demonstrate aesthetic effects, and set quality standards for fabrication and installation.

1. Build mockups of one row with minimum two typical seats in width, beam mounted, with mounting pedestals and tablet arms, including finishes and accessories:
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of fixed audience seating that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Structural failures including standards, beams, and pedestals.
   b. Faulty operation of self-rising seat mechanism.
   c. Wear and deterioration of fabric and stitching beyond normal use.
   d. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.

2. Warranty Periods: As follows, from date of Substantial Completion.
   a. Structural: Five years.
   b. Operating Mechanisms: Three years.
   c. Plastic and Paint Components: Two years.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Source Limitations: Obtain each type of seating required, including accessories and mounting components, from single source from single manufacturer.
2.2 PERFORMANCE REQUIREMENTS

A. Strength and Durability Performance: Chairs and components shall pass testing according to BIFMA X5.4.

2.3 FIXED AUDIENCE SEATING

A. Fixed Audience Seating: Assembly-space seating in permanent arrangement as shown on Drawings.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Dorsal Series G2 Tablet fixed seating as manufactured by KI, Inc., or comparable product by one of the following:
   a. American Seating Company.
   b. Clarin Seating.
   c. Irwin Seating Company.

B. Chair Mounting Standards: Floor attached of the following material:

1. Steel: Stamped steel spiders, secured to the beam yoke below

C. Chair Mounting Beam: Seamless steel horizontal tubular beam mounted on floor -attached steel support pedestal columns spaced according to Drawings.

D. Beam Mounting Pedestal Column: Steel pedestal capped with stamped steel yoke cover to support beam, manufacturer's standard, with floor mounted base plate.

E. Plastic Chairs: Two-piece injection-molded thermoplastic seat and backrest with textured seat and backrest surface on front only. Seat and backrests joined by maintenance-free steel hinge with integral spring mechanism which allows the upper back to articulate with pressure. The hinge shall be covered with high-strength plastic bellows. Four molded-in sills on underside of seat attach to pedestal mounted steel spider.

F. Chair Width: Single-width chair in each row, with minimum chair width as indicated from center to center of armrests.

G. Back Pitch: Fixed.

1. Chair Back Hinges: Self-lubricating type with noiseless mechanism that allows articulation of back rest and covered with plastic bellows with automatic return to vertical position when chair is unoccupied.

H. Tablet Arms: Manufacturer's standard-size, foldaway tablet arm with plastic-laminate writing surface and backer sheet on plywood core, clear lacquered edges.

1. Mounting: Right-hand mounted, except left-hand at aisle seats as indicated.
2. Pivot Mechanism: Two pivot cams, 0 degrees (use position) to 175 degrees (stored position).

I. Accessible Seating:

1. Provide pedestal mounted foldaway tablet arm in accessible locations without chairs.
2. Identify these seats with a sign or marker.

J. Accessibility-Logo Plates: Manufacturer's standard.

1. Material: Aluminum or Stainless steel with black embossed characters.
2. Location: Recessed flush in top of tablet arm surface.
3. Attachment: Adhesive.

2.4 MATERIALS AND FINISHES

1. Composite Wood Products: Made with binder containing no urea formaldehyde.
   Concealed Plywood: HPVA HP-1 hardwood plywood or DOC PS 1 softwood plywood as standard with manufacturer.

B. Plastic Laminate: NEMA LD 3, Grade VGS for vertical surfaces and Grade HGS for horizontal surfaces.
   1. Color and Pattern: As selected by Architect from manufacturer's full range.

C. Molded Plastic: High-density polypropylene, injection molded, with surface that is mar and dent resistant.
   1. Provide with UV inhibitors to retard fading.
   2. Color and Texture: As selected by Architect from manufacturer's full range.

D. Metal Finish: Finish exposed metal parts with manufacturer's standard minimum 1.5-mil-thick, epoxy baked-on powder coating.
   1. Color: As selected by Architect from manufacturer's full range.

2.5 FABRICATION

A. Floor Attachments: Fabricate to conform to floor slope so that standards and pedestals are plumb and chairs are maintained at same angular relationship to vertical throughout Project.

B. Single-Wall, Molded-Plastic Chairs: Contoured plastic shell with smoothly rolled edges and reinforcing ribs on underside of shell. Fabricate for attachment of chair to support with self-threading, corrosion-resistant screws.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine floors, risers, and other adjacent work and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install seating in locations indicated and fasten securely to substrates according to manufacturer's written installation instructions.
   1. Install fixed audience seating with each chair capable of complying with performance requirements without failure or other conditions that might impair the chair's usefulness.
   2. Install standards and pedestals plumb.
   3. Install seating so moving components operate smoothly and quietly.
B. Install floor-mounted standards, beams, and attachments to maintain uniform chair heights above floor.

C. Install base plate with corrosion-resistant expansion anchors into concrete.
   1. Minimum concrete embedment of 1-1/2 inches unless otherwise instructed by seat manufacturer.

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
   1. Inspect components, assemblies, and equipment, including connections, to verify proper, complete, and sturdy installation according to manufacturer's written instructions and product specifications.
   2. Verify that seats return to correct and uniform at-rest position.

B. Fixed audience seating will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.4 ADJUSTING

A. Adjust hardware and moving parts to function smoothly so they operate easily. Lubricate bearings and sliding parts as recommended in writing by manufacturer.

B. Repair minor abrasions and imperfections in finishes with coating that matches factory-applied finish.

C. Replace damaged and malfunctioning components that cannot be acceptably repaired.

END OF SECTION
SECTION 130413 - COMMON SUBMITTAL REQUIREMENTS FOR SPECIAL CONSTRUCTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Supplementary administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals specific to the work of this Division.

B. Related Requirements:
   1. Division 01 submittal requirements.

1.3 DEFINITIONS

A. Contractor: Refers to an entity in direct Contract with the Owner to furnish and/or perform any portion of the Work of the Contract.
   1. Contractor shall review and approve Product Submittals prior to forwarding them to the Architect.

B. Product Submittals: In general, Product Submittals show characteristics of the proposed construction in one of the following forms:
   1. Shop Drawings.
   2. Product Data.
   3. Samples.

C. Action Submittals: Written and graphic information and physical samples that require Architect/Engineer's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

D. Sustainable Design Submittals: Submittals required by Section 01813 "Sustainable Design Requirements." Submit documentation for products and materials contributing to achievement of LEED rating indicated. Sustainable Design Submittals are in addition to other submittal requirements.

E. Informational Submittals: Written and graphic information and physical samples that do not require Architect/Engineer's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

F. Submittal Review Sheet: Specific form required to accompany each submittal. Obtain Submittal Review Sheet from the SmithGroup Project Manager.
1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Requirements specified for submittals are intended to provide efficient handling, while permitting review responsibilities to be carried out.

B. Avoidable Resubmittals: The first two reviews of each specified submittal will be processed without cost to the Contractor. After the second review, the Owner may charge the Contractor for the cost of such additional processing, unless the processing results from approved Change Orders causing revisions to previously approved submittals.

C. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
   2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
   3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
   4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
      a. Architect and Engineer reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

D. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
   1. Refer to Section 01330 for quantity of days allowed for review.
   2. When a large volume of submittal materials is scheduled, additional review time may be required. Similarly, a particular submittal may require review completion in less than the agreed normal time. Due to variations in submittal volume and processing needs, agreed review time is not intended to apply to extreme conditions.

E. Maintain at the Project Site ready access to the latest reviewed Shop Drawings and Product Data, and one set of samples.

PART 2 - PRODUCTS

2.1 SUSTAINABLE DESIGN REQUIREMENTS

A. The District requires the Contractor to implement practices and procedures to meet the project's environmental performance goals. The Contractor shall ensure that the minimum requirements related to these goals, as defined in Section 01813 "Sustainable Design Requirements" are implemented to the fullest extent possible. Specific materials and systems have been selected to this end. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the aforementioned environmental goals and LEED certification.
B. Specific material goals, beyond inherently designed facility service systems, that may impact this area of work include: use of products with third-party verified Environmental Product Declaration, use of products with Health Product Declarations, use of products from manufacturers with publicly disclosed Corporate Sustainability Reports, use of products with recycled-content materials; use of locally-purchased, manufactured and extracted materials; use of FSC certified wood; use of low-emitting materials; construction waste recycling; and the implementation of a construction indoor air quality management plan.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Project Closeout and Maintenance Material Submittals: See requirements in Division 01.

B. Be responsible for quantities, weights, and dimensions to be confirmed and correlated at the site; for information that pertains solely to the fabrication processes and to the means, methods, techniques, sequences, and procedures of construction; and for coordination of the work of every trade, supplier, and subcontractor.

C. Be responsible for each submittal to be in conformance with information given and the design intent expressed in the Contract Documents.

D. Provide with each submittal specific written notice of any variation from the requirements of the Contract Documents by causing a specific notation to be made on the Submittal Review Sheet and Submittal Transmittal. Changes to the approved construction documents are subject to DSA review and approval, submitted by the Architect as a CCD per DSA IR A-6.

3.2 ARCHITECT/ENGINEER'S AND GENERAL CONTRACTOR'S ACTION

A. General: Architect will not review submittals that do not include the Submittal Review Sheet.

B. Action Submittals: Architect's staff and consultants will review the submittal, and mark the Submittal Review Sheet with an action code. The code meanings are described below.

C. Additional codes may be provided within comments or as an electronic submittal review stamp and shall be used in help indicating return of partial submittals.

E. Review Code meanings are as follows:

   1. Action Codes Permitting Use:

      a. When an action code permitting use is assigned to a submittal, it does not authorize work that does not comply with the requirements of the Contract Documents. Acceptance of the Work will depend on compliance.

      b. Code AP - Approved: The Work covered by the submittal item may proceed, provided it complies with Contract Document requirements.

      c. Code AN - Approved as Noted: The Work covered by the submittal item may proceed, provided it complies with the Architect's notations and Contract Document requirements.
