1. The survey was prepared using a combination of photogrammetric mapping provided by Design Prototype, Technology in Landscape and Urban Design (DTLD) supplemented data survey and mapping by ICC, Inc., in Brentwood, California. All drawings were produced by ICC, Inc. in accordance with the Specifications for Surveying and Mapping of the American Congress on Surveying and Mapping. The boundaries portrayed on the maps may differ from actual existing conditions. Therefore, the surveyor should cross-check all boundary lines with actual existing conditions before any physical work commences.

2. Elevations are based on MLLW as shown on County Survey Datum. MLLW is defined as Mean Lower Low Water.

3. Symbolic data shown herein was based upon a combination of surface data and line referencing. The location of any building, structure, or other object is shown on the Blueprints and is referenced on the current survey data provided to the Client. All other data shown herein is based upon a combination of data collected by the Surveyor during the course of the Survey and current data sources available to the Surveyor at the time of surveying.

4. Accuracy of data is based on current information only. Surveys shown are based on the accuracy of the survey methods used for the project. The data shown herein was surveyed by ICC, Inc., licensed by the California State Board of Public Works, Building Department under No. 22256, on July 23, 2018.
